10.Completing PM Work Orders ---------- 54 - 60

11.Completing PV calls ---------- 61 - 66

12.Approve / Reopen Work Order ---------- 67 - 72

13.Creating The New Customer ---------- 73 - 84

14.Adding New Project ---------- 85 - 88

14.1 Adding a New task ---------- 89 - 90

MEDVICE SOLUTIONS

15.Adding New Asset ---------- 91 - 96
15.1 Adding a New Manufacturer & Model ---------- 97 - 102
15.2 Creating Department & Physical Location ---------- 103 - 107
15.3 Asset Submission ---------- 108 - 109
15.4 Approving Assets Lists ---------- 110 - 111
16.Super Find ---------- 112 - 113
16.1 Asset Super Find ---------- 114 - 116
16.2 Work Order (WO) Super Find ---------- 117 - 120
17.Universal Search ---------- 121 - 122
18.Know our Policy ---------- 123 - 127
19.Daily Rounds ---------- 128 - 132
20.Reports ---------- 133 - 137
21.Advanced Reports ---------- 138 - 144
22.Preventive Maintenance (PM) schedule ---------- 145 - 149
23.Manuals Library ---------- 150 - 154

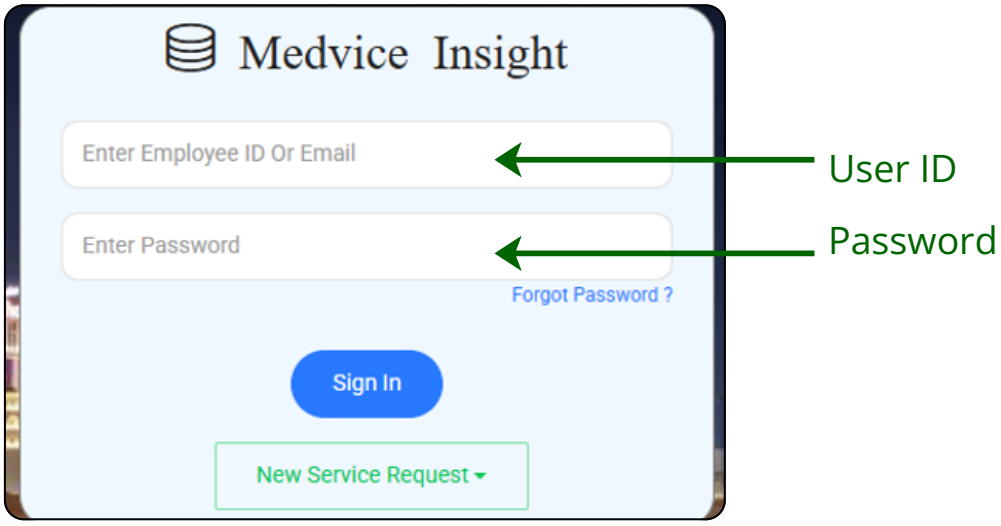
MEDVICE Insight is our proprietary software designed for strong clinical engineering practices. It centralises medical equipment inventories, and it features a closed-loop work order process to track equipment service and expense data from acquisition to retirement. The software can be customised to report data that is important to you, so that you can better identify areas for cost savings and quality improvement.

This user-friendly system incorporates four major modules that help manage all clinical engineering activities in one place. It includes robust interfaces for asset and service management, as well as a centralized location to communicate and source parts requests. The reporting and analytics features allow multiple users within an organization to customize their own dashboards that highlight key performance indicators that are most relevant to them, and the advanced reporting feature can generate more detailed reports for regulatory compliance or hospital leadership. Even more, the software can be integrated with multiple existing hospital systems, such as ERP and HRIS, and it is also designed to be used in all-sized organizations, from single departments to multi-facility hospital systems. A software demonstration is available upon request.

Medvice
Insight Login

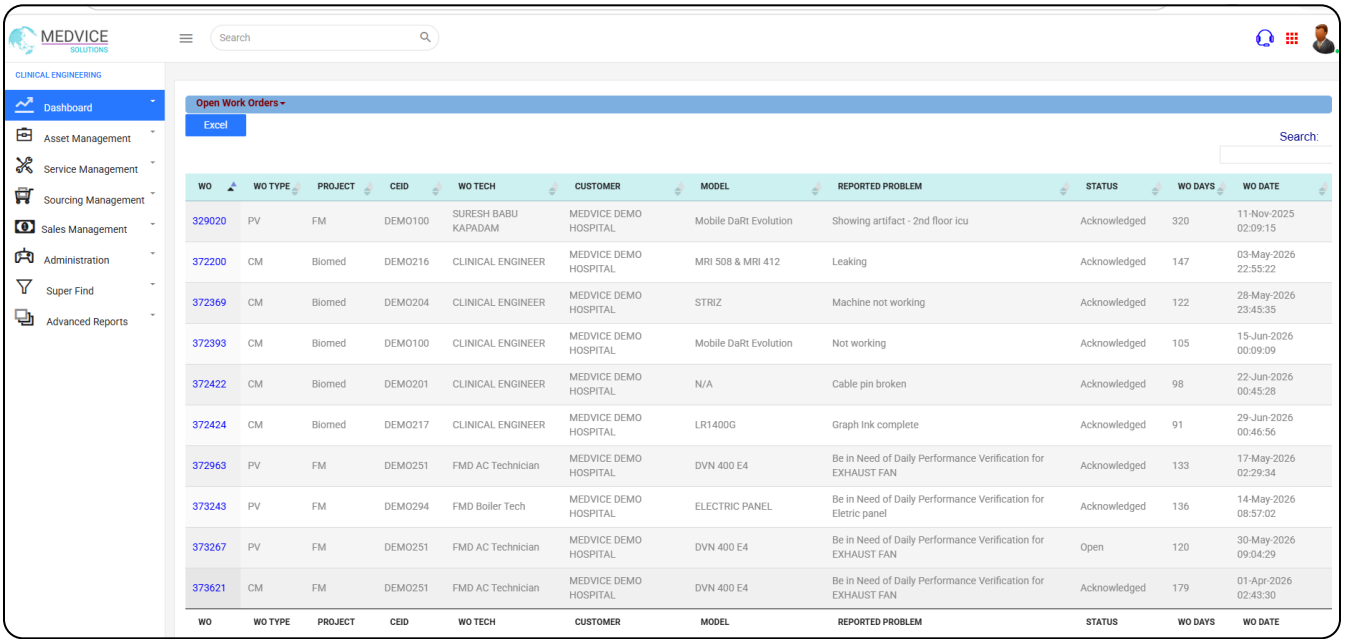
Login Page & Dashboard

Click the link below to open the Login Page:
https://medvice.solutions/



After entering your User ID and Password, the MEDVICE Insight Dashboard will appear, as shown in the image below.

The dashboard provides access to multiple functions that enable you to efficiently manage and navigate the MEDVICE Insight application.



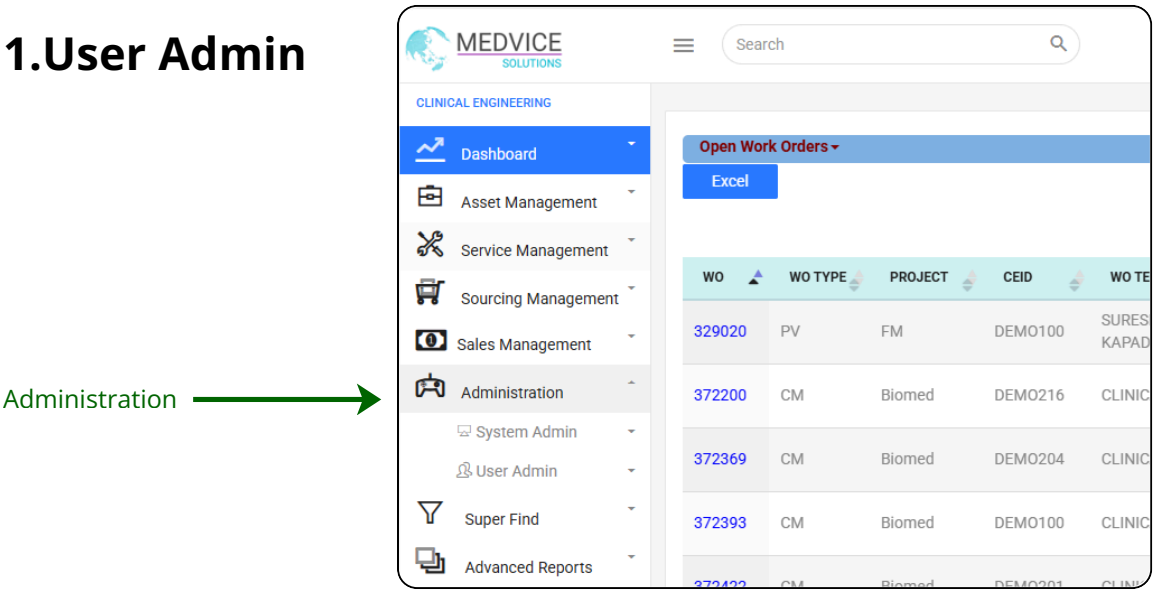
Creating User ID, Password and Access

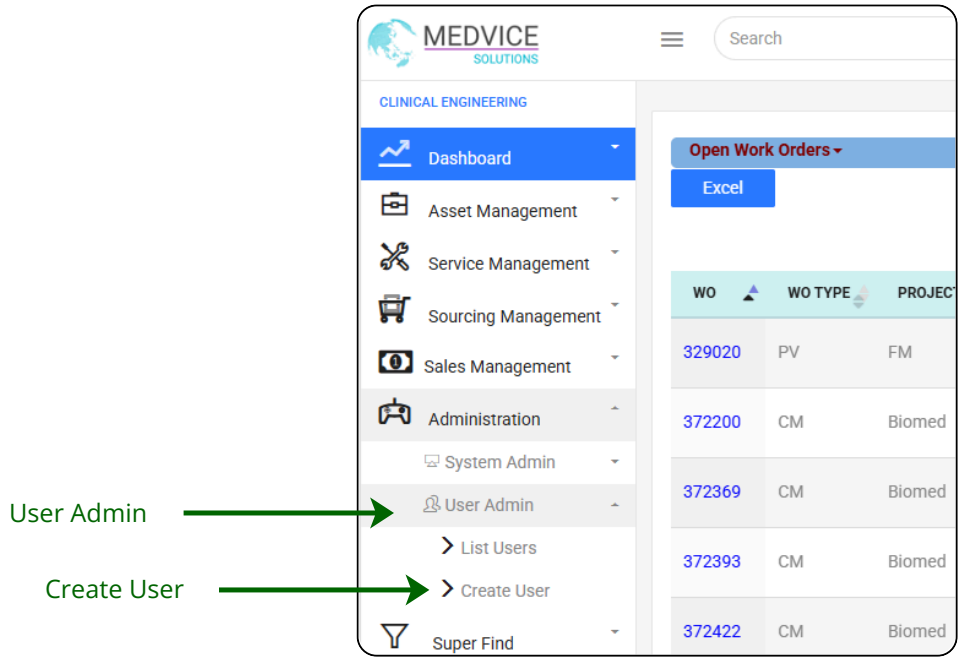
Dashboard & Administration

After successfully logging in, the MEDVICE Insight Dashboard will be displayed, as shown in the image below. Note: The Administration tab is accessible only to users with Manager or Reference Manager access.

To access the Administration section, click the Administration tab. The Administration section provides the following two options:

1.User Admin





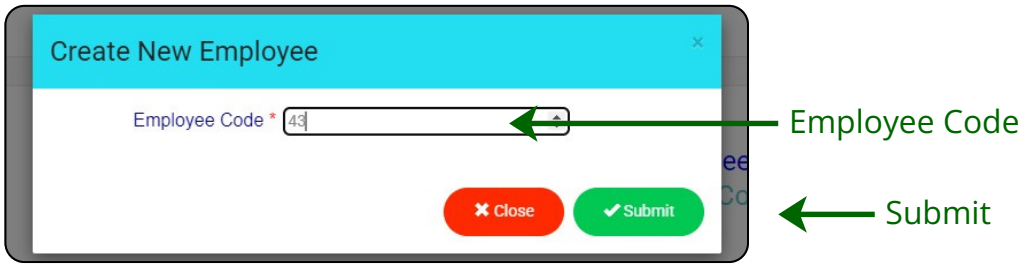
Create User Admin

Under the User Admin section, two options are available:

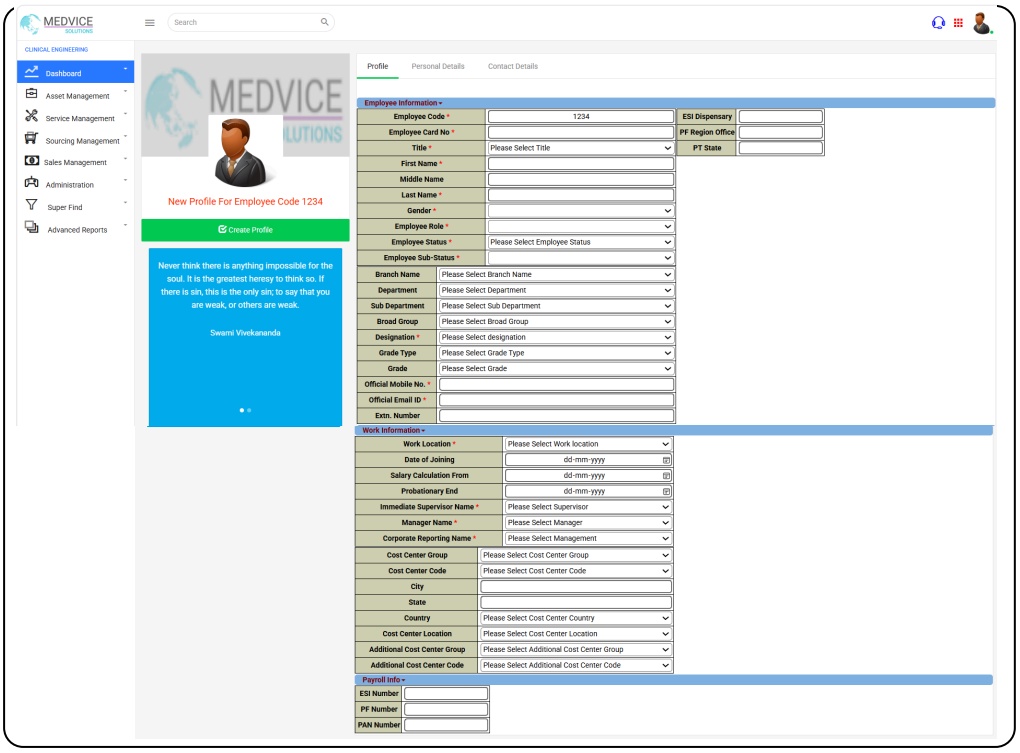
1. **List Users**
2. **Create Users**

Click the **Create User** tab to create a new user.

After selecting Create User, the Create New Employee pop-up window will appear. Enter the required employee information in the respective fields, as shown in the image below.



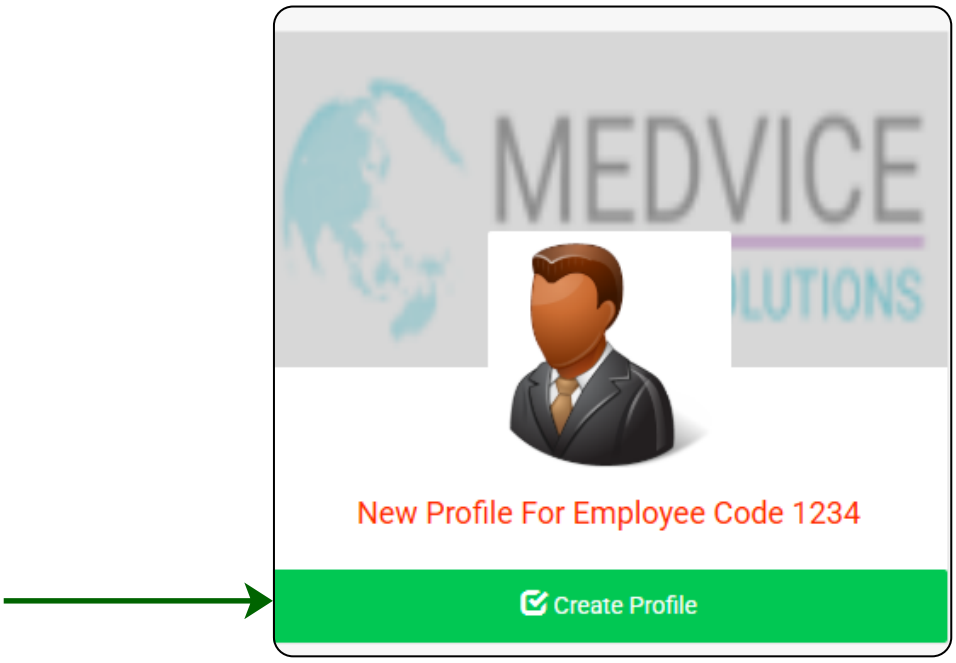
After clicking the Submit button, the New Profile for Employee window will be displayed. Enter all the required information in the mandatory fields to complete the employee profile.



MEDVICE SOLUTIONS

User Profile

After entering all the required information, select Create Profile located on the left side of the window, as shown in the image below. The User Profile will be created successfully.

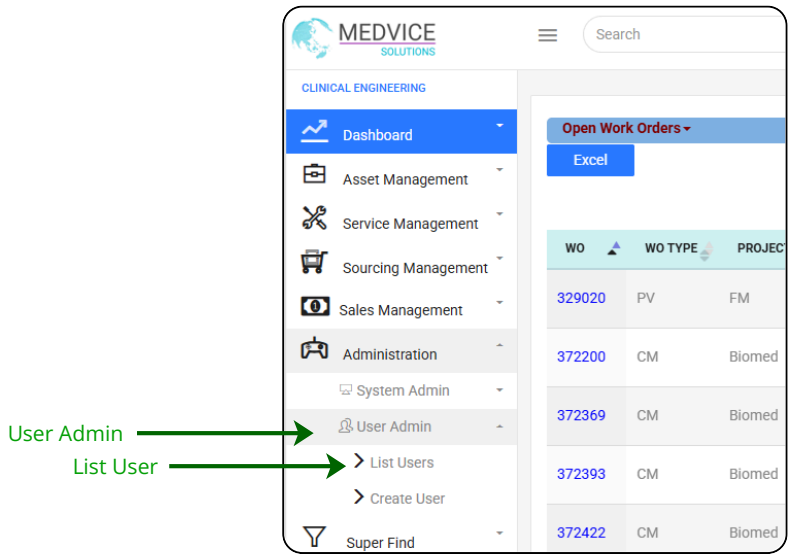


You have now successfully created the User Profile.

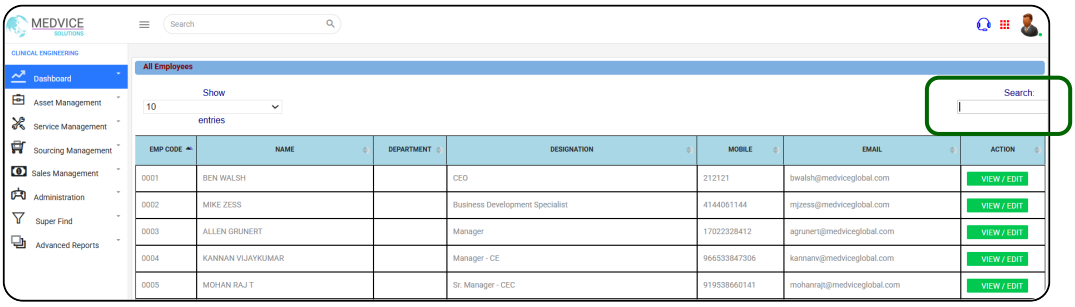
Assigning Listed Customers and User Group Access for new Users

After successfully creating the User Profile, assign the appropriate access permissions based on the user's role and responsibilities.

Select the List User tab to access the complete list of users.

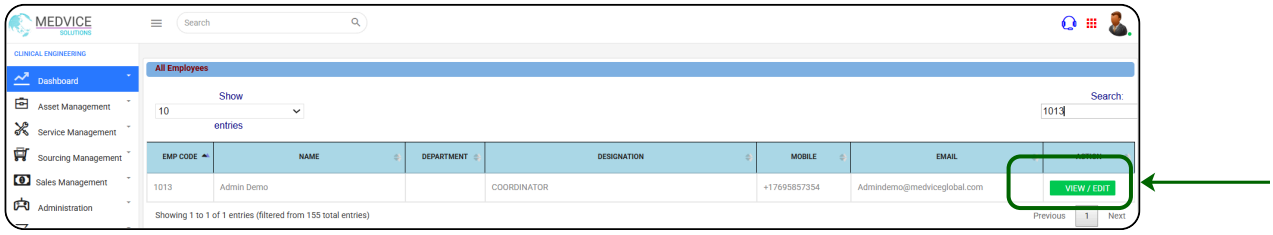


Use the Search option to locate a specific user and select the respective user record.

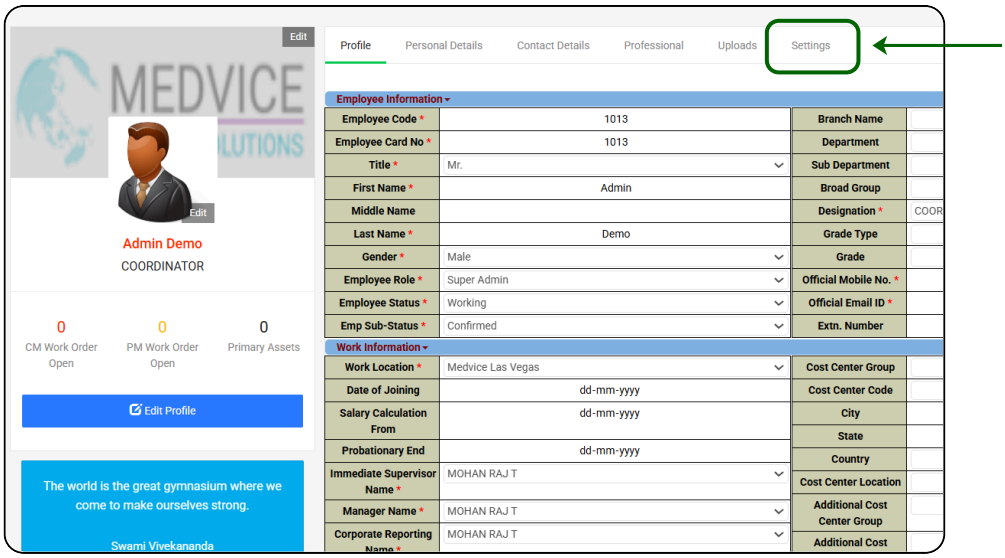


MEDVICE SOLUTIONS

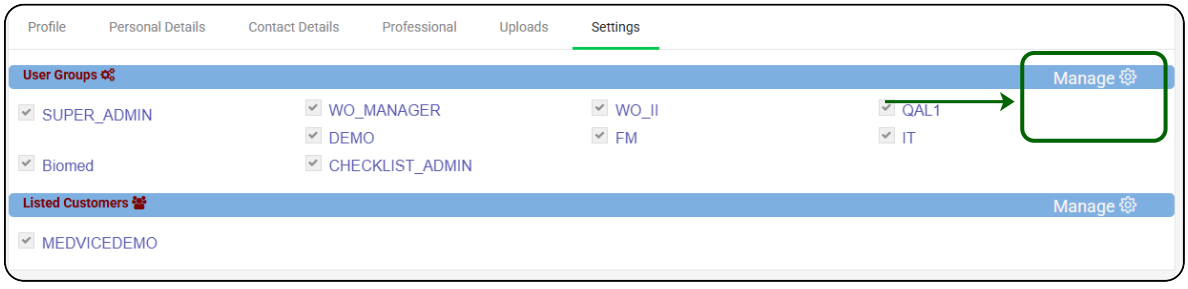
Select the View/Edit option to access the user's detailed User Profile page.



Navigate to the Settings tab within the newly created User Profile, as shown in the image below.



Under the Listed Customers or User Groups section, click the Manage button.

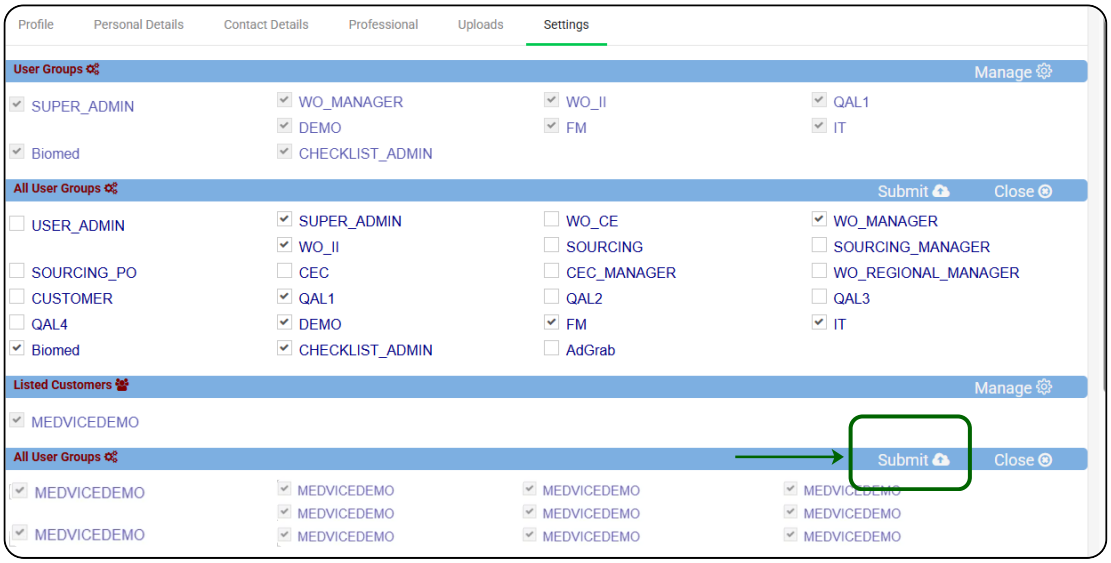


MEDVICE SOLUTIONS

A list of all available Customers, User Groups, and Access Permissions will be displayed.

Select the required Customers, User Groups, and Access Permissions to assign the appropriate access to the user.

After selecting the appropriate options, click the Submit button to save the changes.



The selected access permissions will be assigned to the user. The user will have access only to the groups, customers, and features permitted by their assigned permissions.

Note: Access permissions can be assigned or modified only by Managers or users with the required administrative privileges.

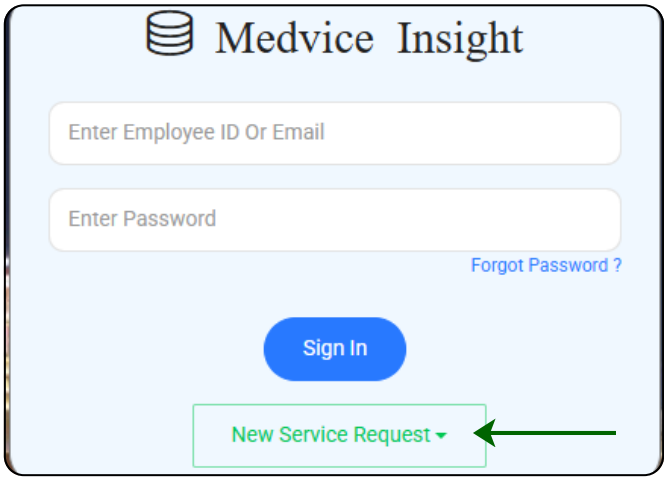
Assigning The Work Order without Credentials

Login Page& New Service Request

After logging in, the MEDVICE Insight Dashboard will be displayed, as shown in the image below.

2. Without User ID & Password

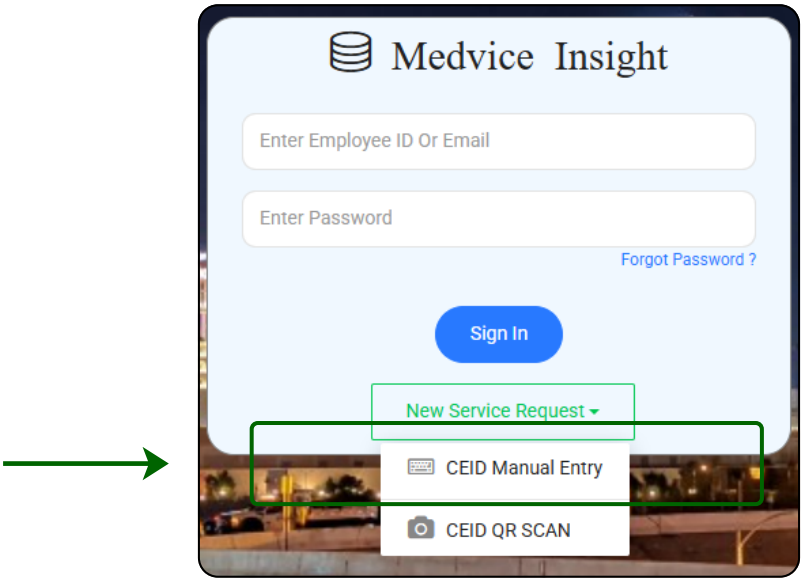
On the login page, the New Service Request option is available below the Sign In button.



After clicking on New Service Request, two options will be displayed:

1.CEID Manual Entry
2.CEID QR Scan

We will now proceed with the first method: CEID Manual Entry.

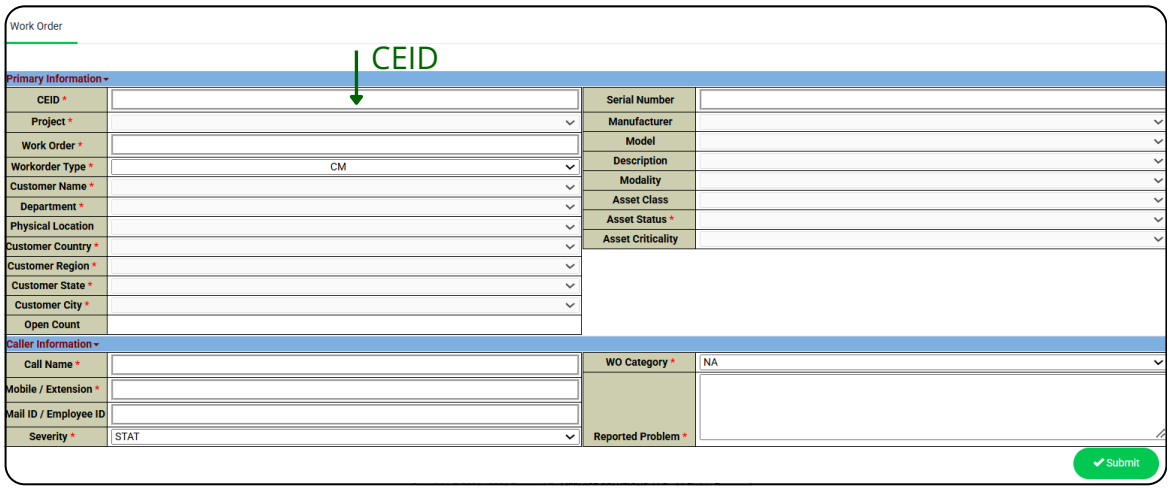


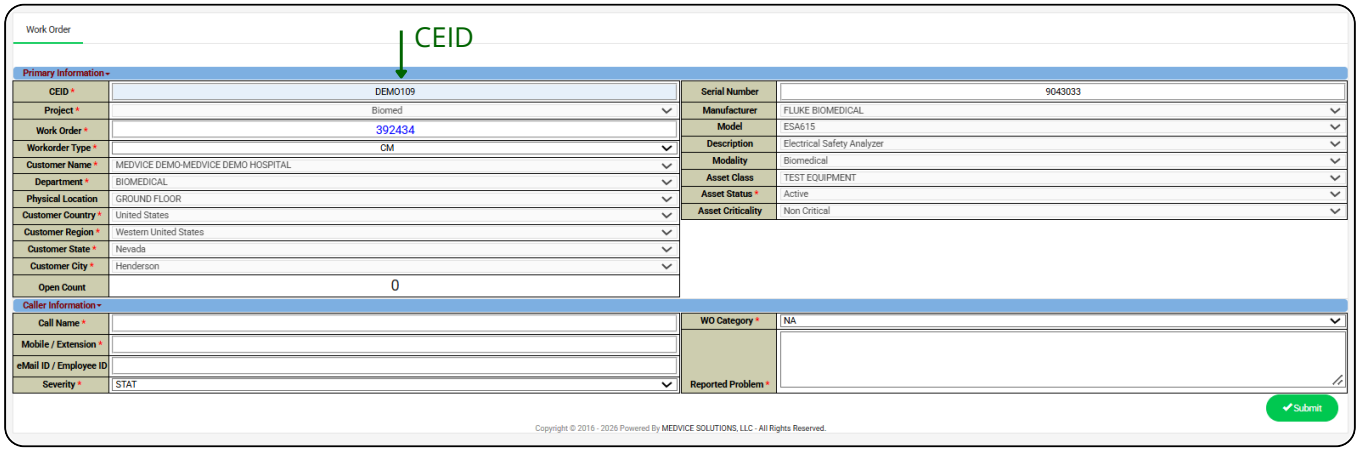
MEDVICE SOLUTIONS

Assigning with CEID Manual Entry

1. CEID Manual Entry

Specify the CEID in the designated field and proceed. The system will retrieve and display the Primary Asset Information, Pre-Loaded Information, and the Work Order highlighted in blue, as shown in the images below.





Guidelines:

- Upload the Equipment/Asset Information with the CEID in MEDVICE Insight. Ensure the correct CEID is entered.

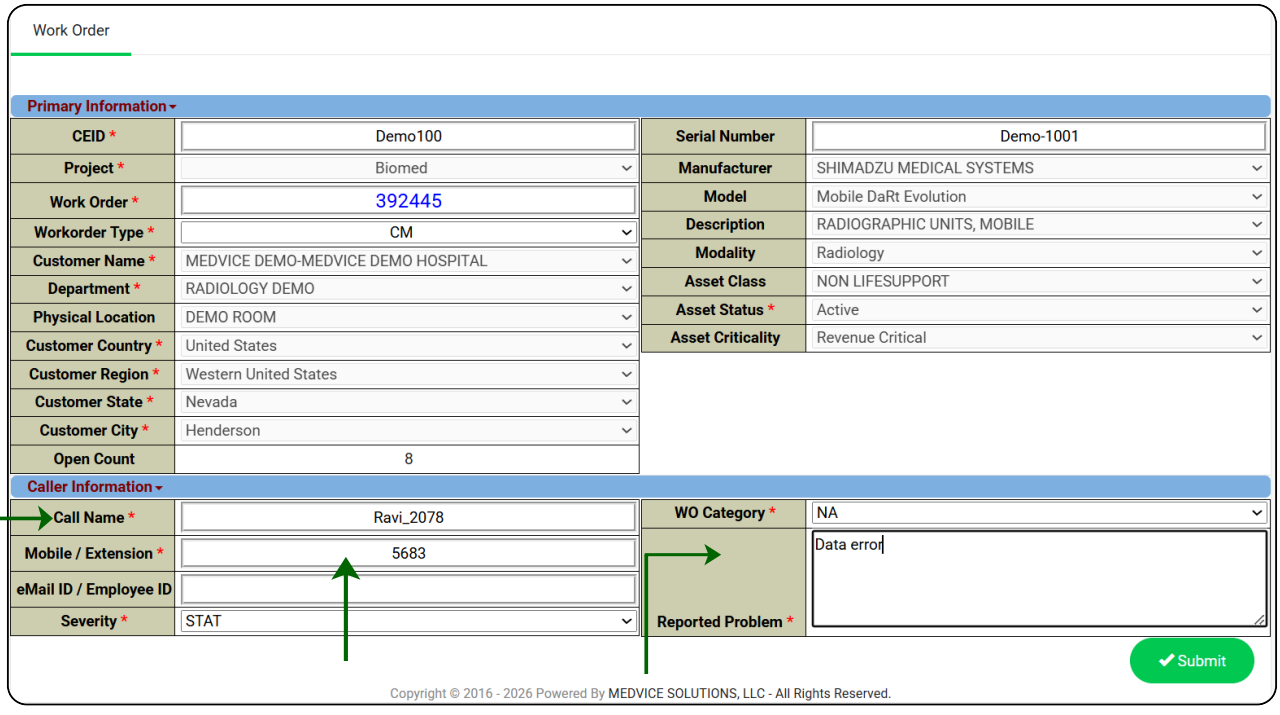
MEDVICE SOLUTIONS

Caller Information

Cross-verify the Pre-Loaded Asset Information with the Customer Information to ensure that all details match the information provided in the Pre-Loaded Asset Information.

Enter the Caller Information manually, as shown in the image below:

a. Caller Name & ID – Enter the caller's name, with or without the Caller ID.
b. Contact Number – Enter the caller's mobile number or extension number.
c. Reported Problem – Enter the exact issue reported by the caller, along with the relevant location details.

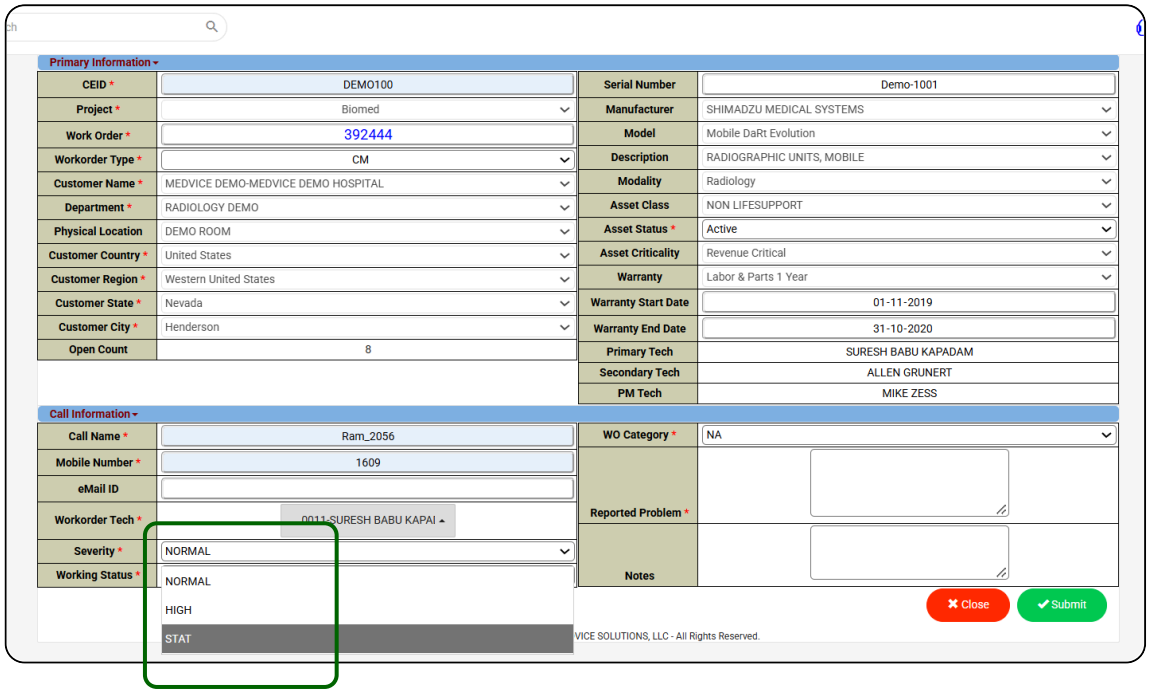


Name Extension or mobile Reported Problem

MEDVICE SOLUTIONS

Select the appropriate Severity level while assigning the Work Order:

- **Normal –** Used for standard Work Orders to be handled within the defined response time.
- **High –** Used for Work Orders requiring higher priority and faster response.
- **STAT –** Used for critical Work Orders requiring immediate attention.



The Severity level must be selected for every Work Order assignment, whether assigned with or without user credentials.

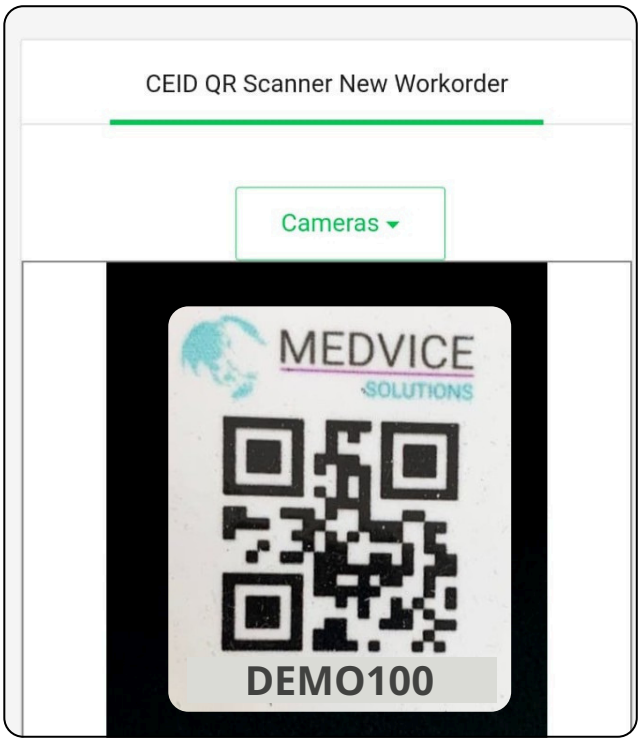
After specifying all required information, select Submit to create the New Work Order.

Note: For Work Orders assigned without user credentials, the system automatically assigns the Primary Technician. The CEC will update the assigned Technician based on Technician availability, when required.

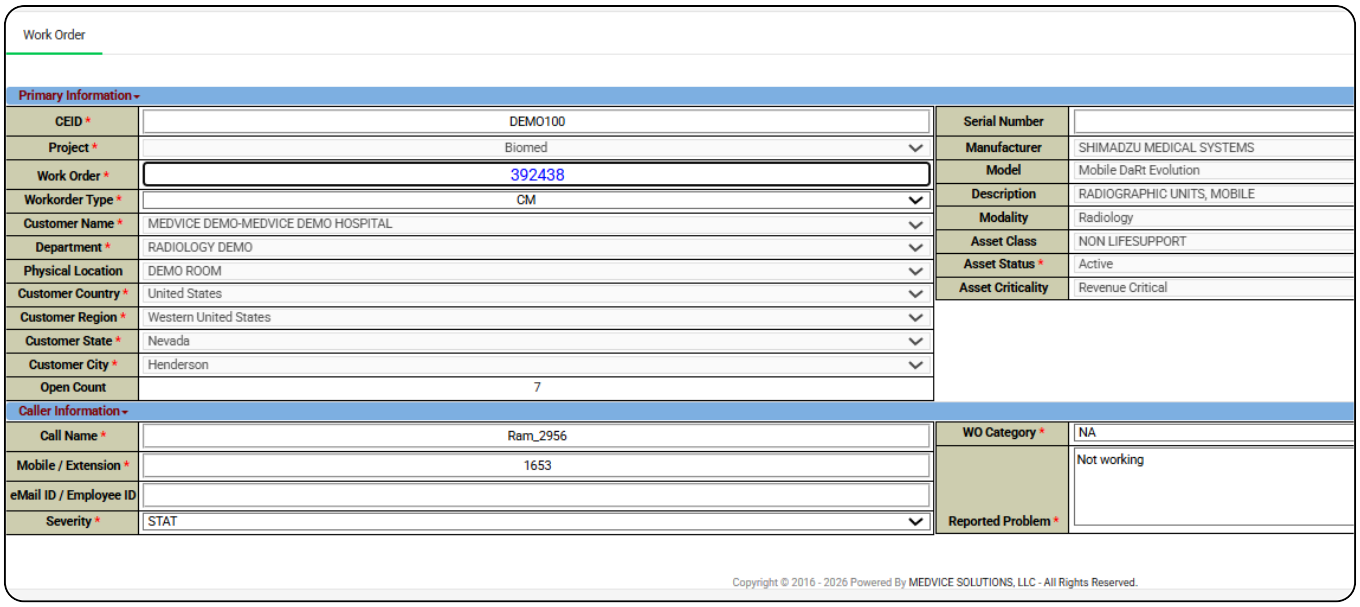
Assigning with CEID QR Scan

2. CEID QR Scan

You need to show the CEID QR Code to the webcam to proceed with assigning the Work Order.



Once the CEID QR is scanned, the pre-loaded Asset Information will automatically be displayed.



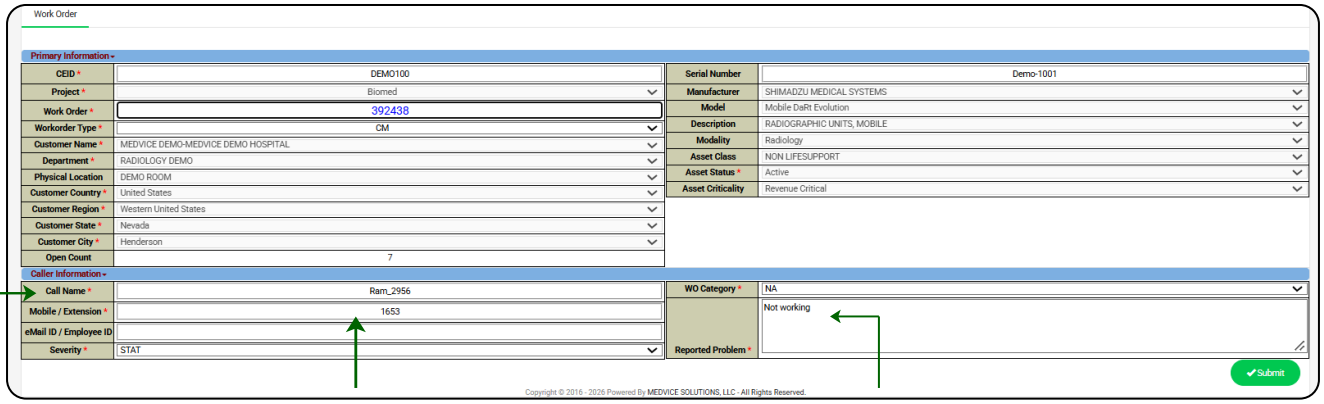
MEDVICE SOLUTIONS

New Work Order Submission

Cross-verify the Pre-Loaded Asset Information with the Customer Information to ensure that all details match the information provided in the Pre-Loaded Asset Information.

Enter the Caller Information manually, as shown in the image below:

a. Caller Name – Enter the caller's name, with or without the Caller ID.
b. Contact Number – Enter the caller's mobile number or extension number.
c. Reported Problem – Enter the exact issue reported by the caller, along with the relevant location details.

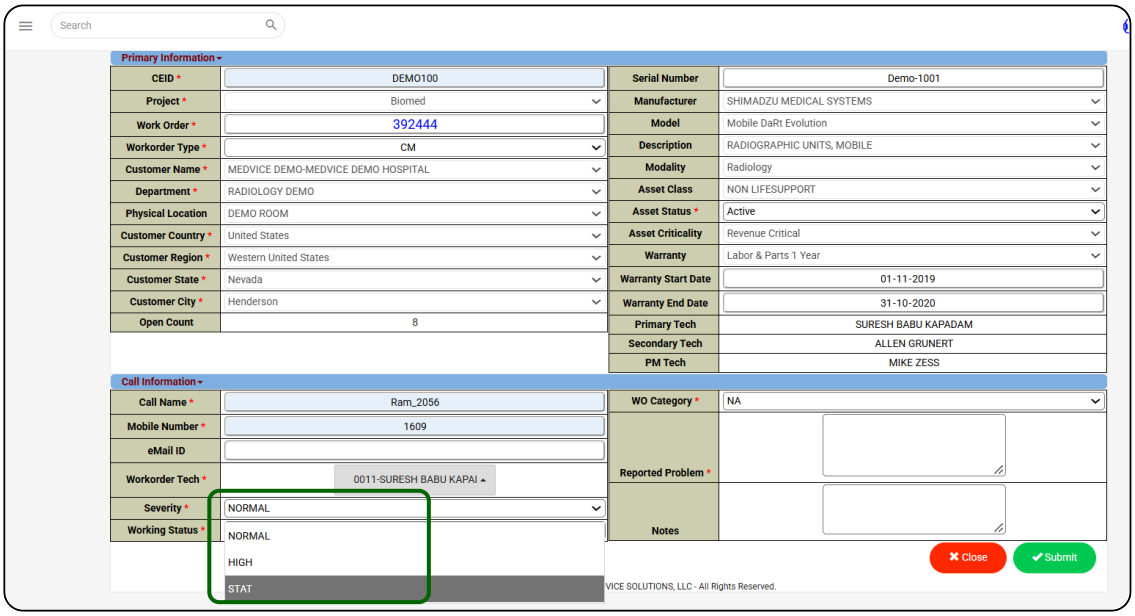


Name Extension or mobile Reported Problem

MEDVICE SOLUTIONS

Select the appropriate Severity level while assigning the Work Order:

- **Normal –** Used for standard Work Orders to be handled within the defined response time.
- **High –** Used for Work Orders requiring higher priority and faster response.
- **STAT –** Used for critical Work Orders requiring immediate attention.



Note: The Severity level must be selected for every Work Order assignment, whether assigned with or without user credentials.

After specifying all required information, select Submit to create the New Work Order.

Once the Work Order is assigned, the assigned technician will receive a notification on their mobile device. The technician can review the notification and proceed with the assigned Work Order accordingly.

You have now successfully created a New Work Order.

Assigning The Work Order with Credentials

Dashboard & Work Order

After login, the Medvice Dashboard will appear, as shown in the image below.

Assigning the Work Order:
There are two methods to assign a Work Order:

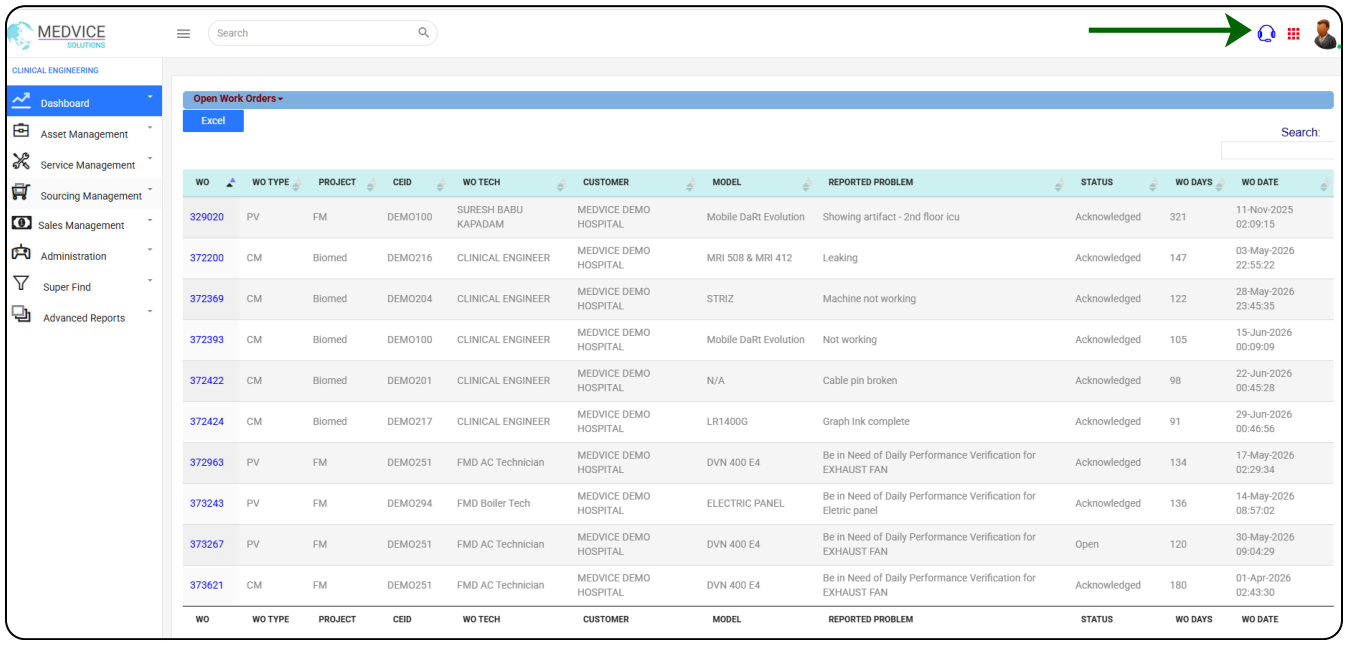
1. **With User ID & Password**
2. **Without User ID & Password**

1. With User ID & Password
In this method, you must log in using your User ID and Password to assign the Work Order, as shown in the image below.

Guidelines:

- Equipment/Asset information along with CEID should be uploaded in medvice insight
- Correct CEID has to be entered

Click the Microphone icon located at the top-right corner of the screen to assign a new Work Order.

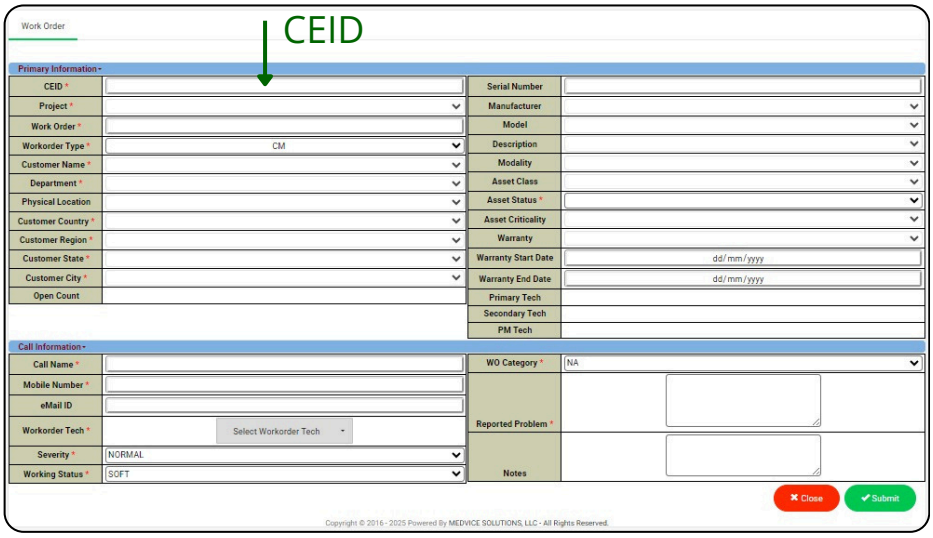


Assigning The Work Order with CEID

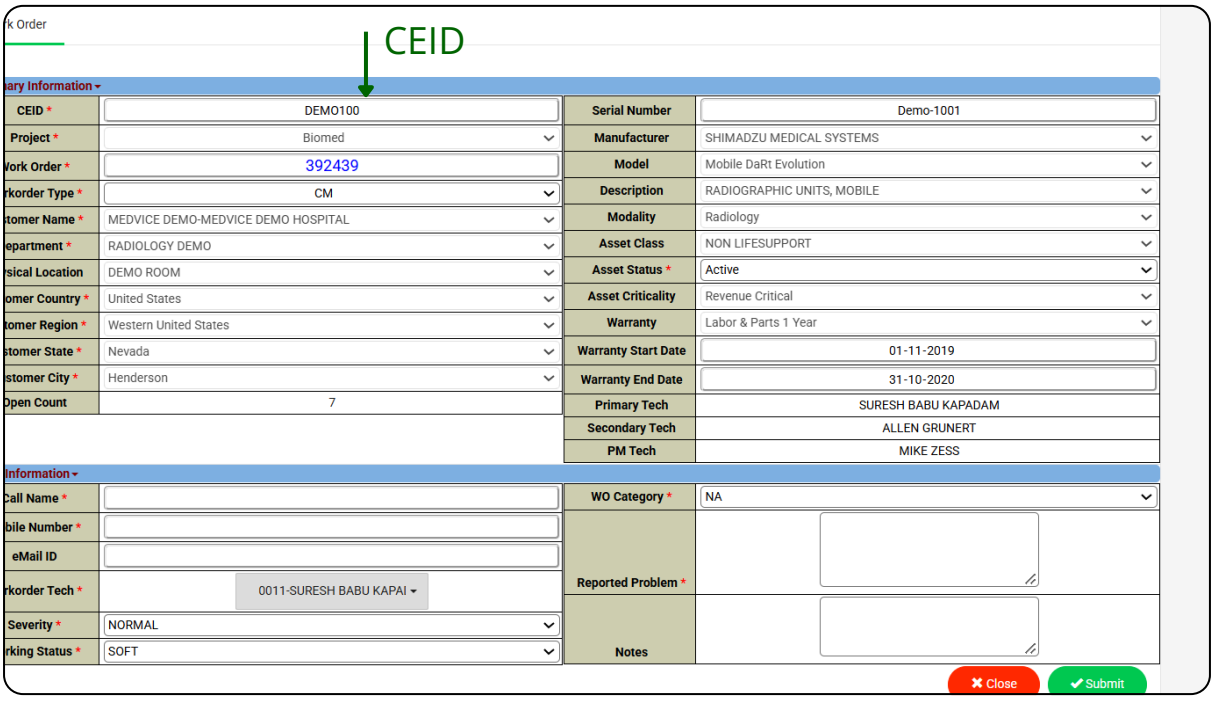
There are two ways to assign a New Work Order:

1. **With CEID**
2. **Without CEID**

1. With CEID



First, enter the CEID and press Enter.
After that, the Primary and Pre-Loaded Asset Information, along with the Work Order (highlighted in blue), will be displayed, as shown in the image below.



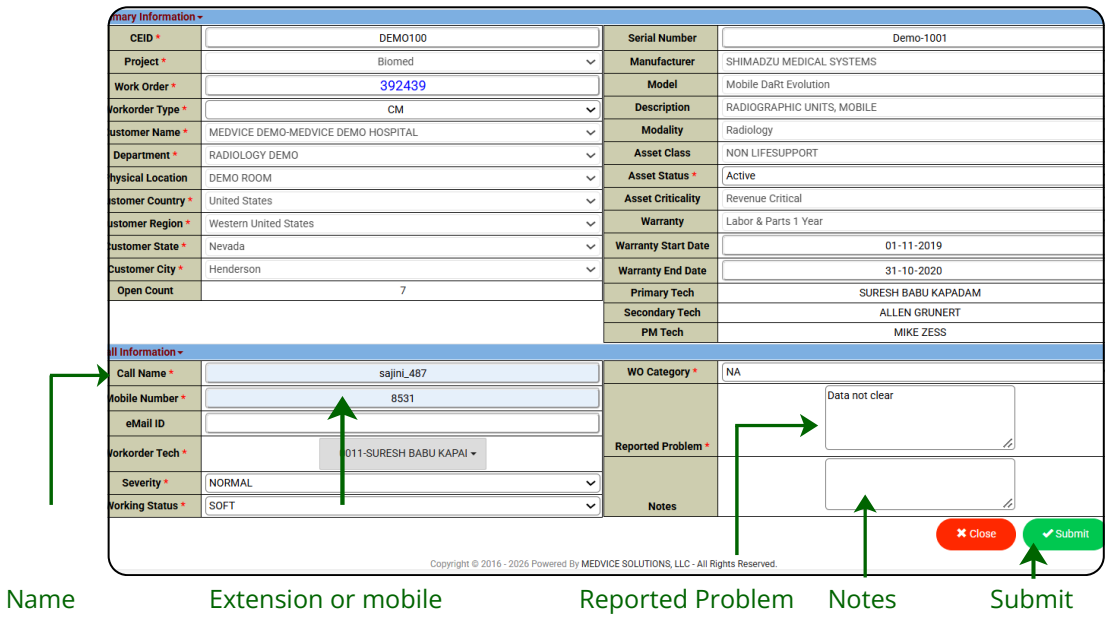
MEDVICE SOLUTIONS

Pre-Loaded & Caller Information

Cross-verify the Pre-Loaded Asset Information with the Customer Information to ensure that the details match the information provided in the Pre-Loaded Asset Information.

Enter the Caller Information manually, as shown in the image below:

a. Caller Name – Enter the caller's name, with or without the Caller ID.
b. Contact Number – Enter the caller's mobile number or extension number.
c. Reported Problem – Enter the exact issue reported, along with the relevant location details.
d. Notes – Enter any additional information related to the Work Order, if applicable.



After entering all required information along with Severity (for Severity details, refer to page 18 of the manual), select Submit to initiate the creation of the new Work Order.

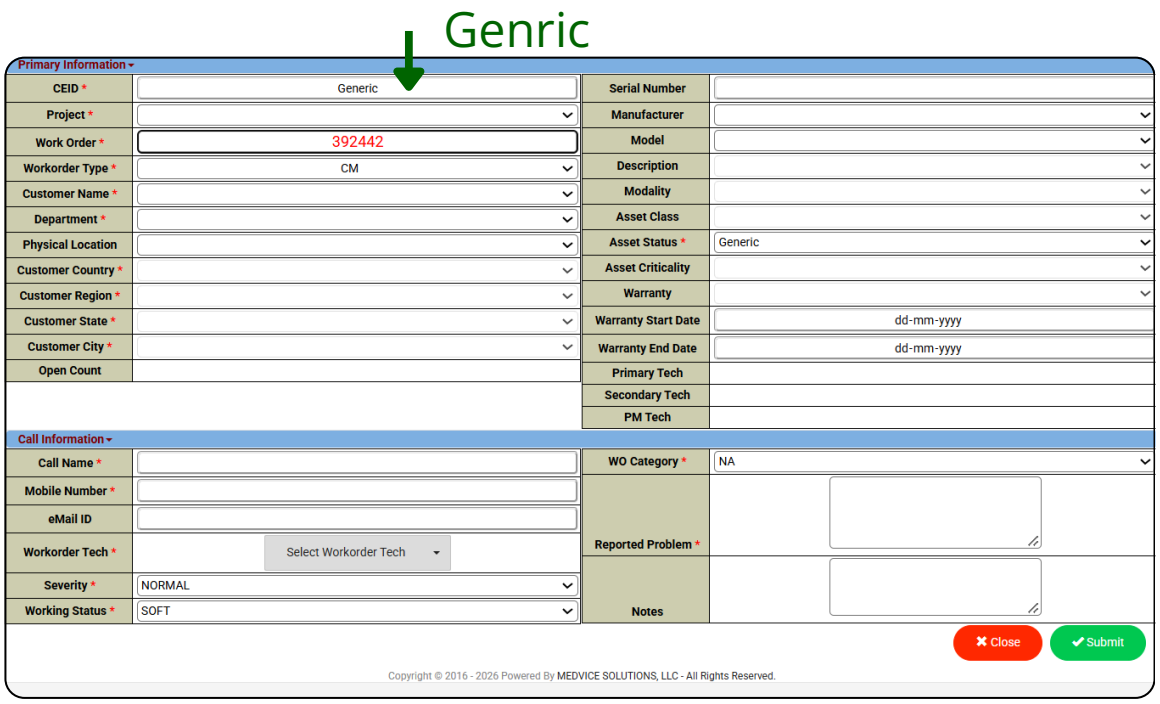
If the Pre-Loaded Asset Information and Work Order (highlighted in blue) are not displayed after entering the CEID, this indicates that the CEID has not been configured or updated in the system.

In such cases, proceed using the Without CEID method and manually enter the required Primary Asset Information.

Assigning The Work Order without CEID

2. Without CEID

Instead of entering a CEID, specify Generic in the designated field and proceed. The system will display only the Work Order (highlighted in red). The Pre-Loaded Asset Information will not be available, as shown in the image below.



Select the appropriate Project Type based on the nature of the service request, such as FM, IT, or Biomed. Based on the selected Project Type, manually specify the required Primary Information and Caller Information.

Primary Information:

1. Hospital

2. Department

3. Floor / Room Number

Caller information:

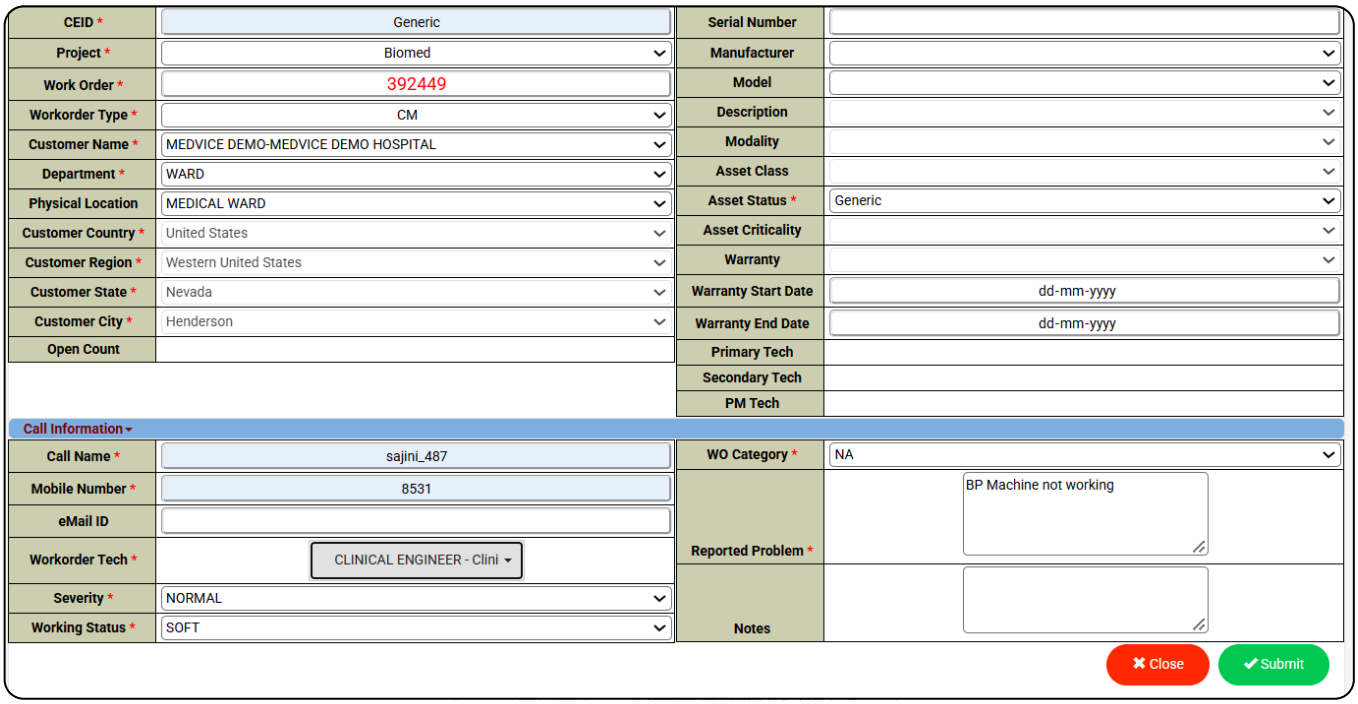
a. Caller Name – Enter the name with or without the Caller ID.

b. Contact Number – Enter the Mobile Number or Extension Number.

c. Reported Problem – Enter the exact issue, along with the location details.

d. Notes – Enter any Additional Information related to the work order, if applicable.

New Work Order Submission



After entering all required information along with Severity (for Severity details, refer to page 18 of the manual), select Submit to initiate the creation of the new Work Order.

Upon successful assignment, the designated technician will receive a notification on their mobile device.

The technician can review the notification and proceed with the assigned Work Order accordingly.

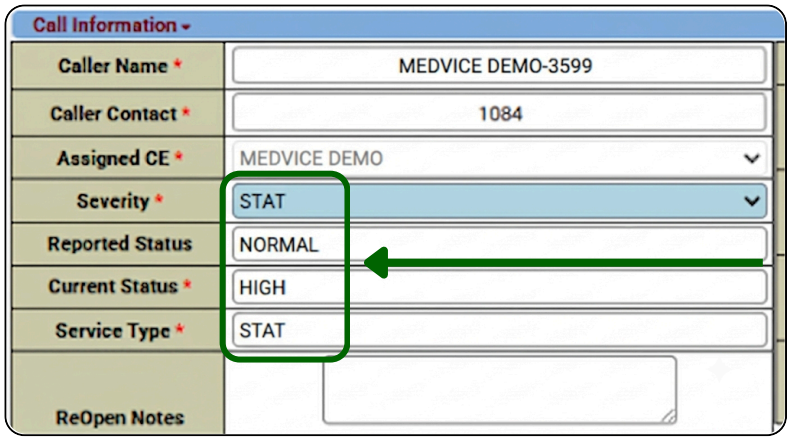
The New Work Order has been successfully created.

Work Order Acknowledgement

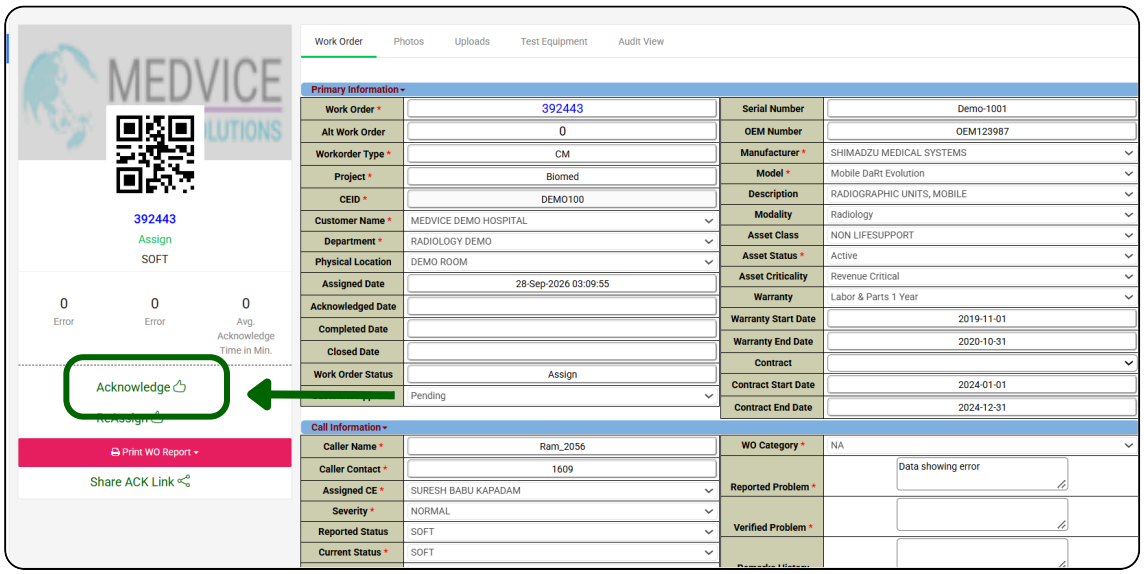
Work Order Acknowledgement

Work Order Acknowledgement Based on Severity

- **NORMAL:** The assigned technician must acknowledge the Work Order within 60 minutes of assignment.
- **HIGH:** The assigned technician must acknowledge the Work Order within 30 minutes of assignment due to its higher priority.
- **STAT:** The assigned technician must acknowledge the Work Order immediately. This priority is applicable to critical or emergency situations requiring immediate attention.

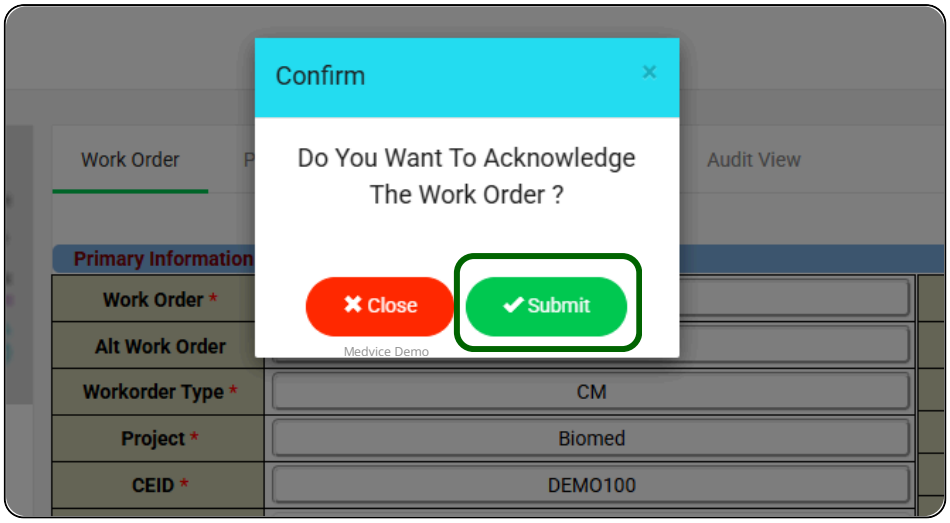


- Upon successful creation of the CM Work Order, the Acknowledgement option will become available.
- Select Acknowledgement to formally acknowledge the Work Order and confirm receipt of the assigned task.

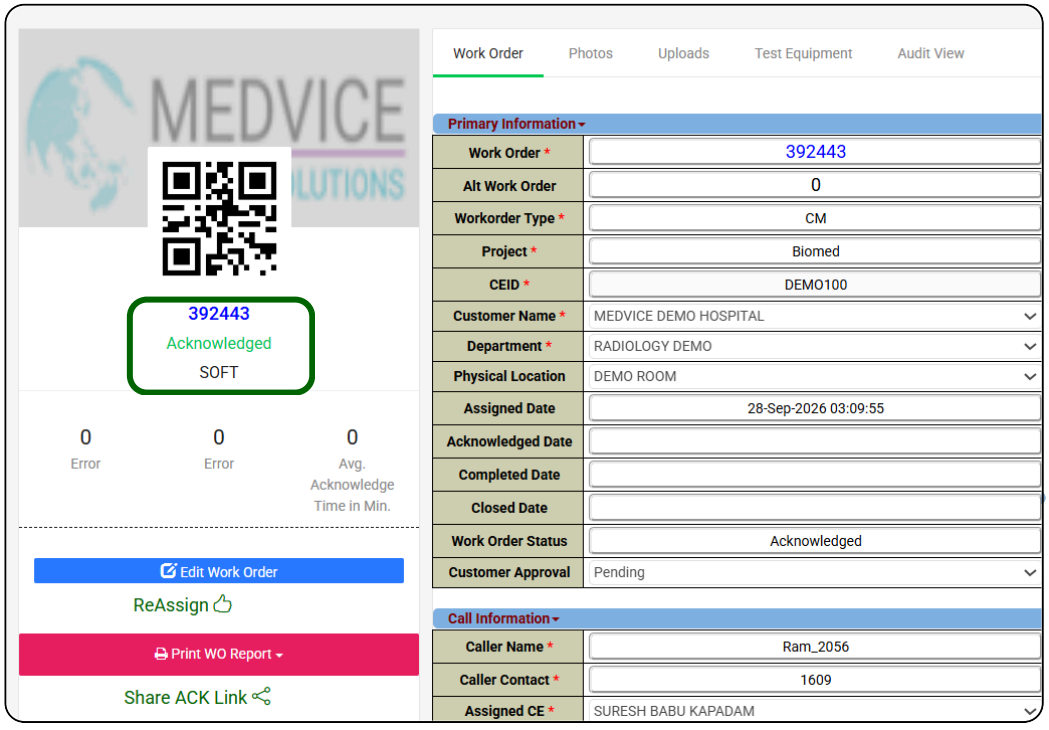


MEDVICE SOLUTIONS

- An Acknowledgement pop-up will appear.
- Click Submit in the pop-up.



- The Work Order will be successfully acknowledged.



The Work Order has been successfully acknowledged through Insight.

Work Order Email Notification

- Once the Work Order is created, the assigned technician will receive an email notification within 30 seconds.

- The technician can view and acknowledge the Work Order directly from the email using a mobile device, without requiring a separate login to MEDVICE Insight.

WO Acknowledgement	Click Here To Acknowledge
Work Order	392443
CEID	DEMO100
Severity	NORMAL E1
Equipment Status	SOFT

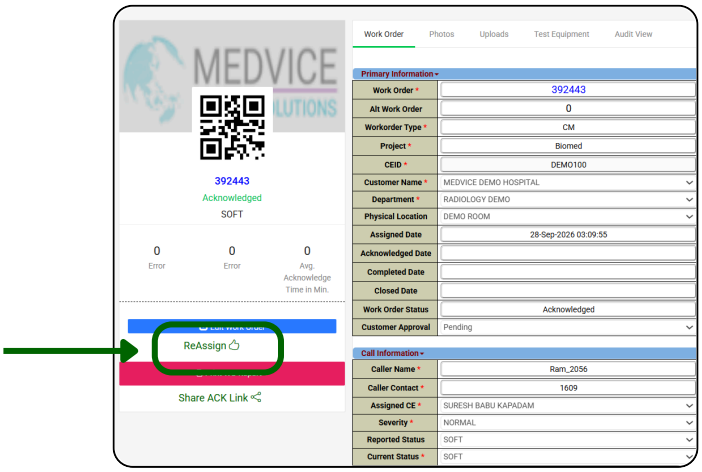
Customer	MEDVICE DEMO HOSPITAL
Department	RADIOLOGY DEMO
Physical Location	DEMO ROOM
Manufacturer	SHIMADZU MEDICAL SYSTEMS

Reassigning Work Order

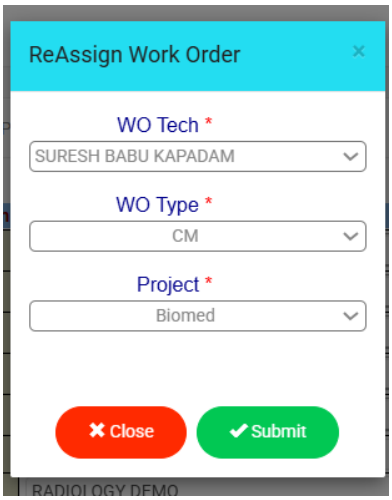
Reassign Work Order

In the event of an assignment discrepancy, such as a Work Order being assigned to a different Technician, Project, or Work Order Type than required, or when the assigned Technician is unavailable due to emergency leave, the Work Order can be reassigned or updated using the Reassign option.

- Open the Work Order that needs to be reassigned.
- Select Reassign. A pop-up will display the current Technician, Project, and Work Order Type.



- Select the required details, verify the updated details, and select Submit to reassign the Work Order.



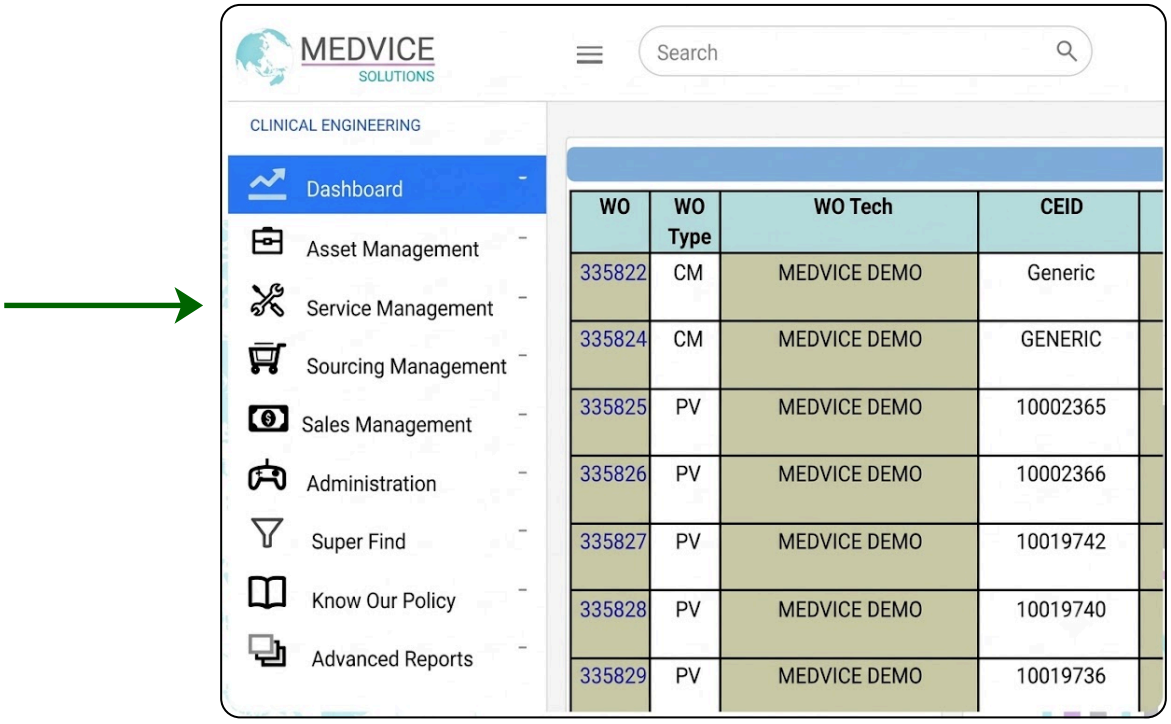
The Work Order will be successfully reassigned to the appropriate Technician, Project, and Work Order Type.

Completing CM Work Orders Without Part

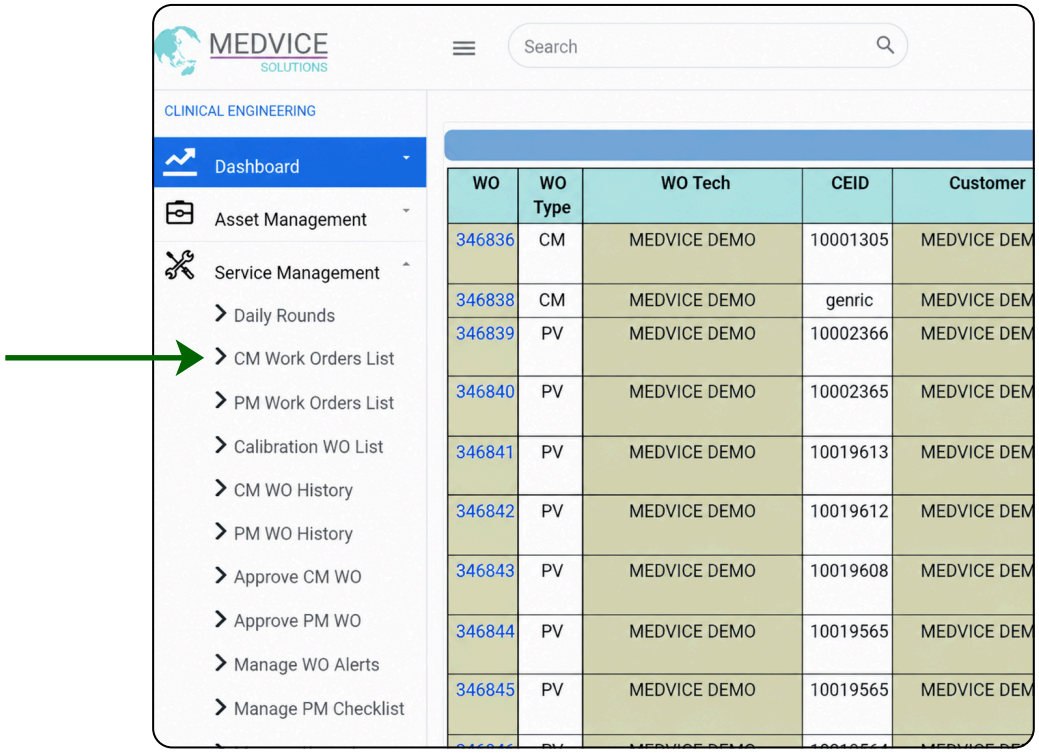
Dashboard

After successful login, the MEDVICE Insight Dashboard will be displayed, as shown in the image below.

Navigate to the Service Management tab.

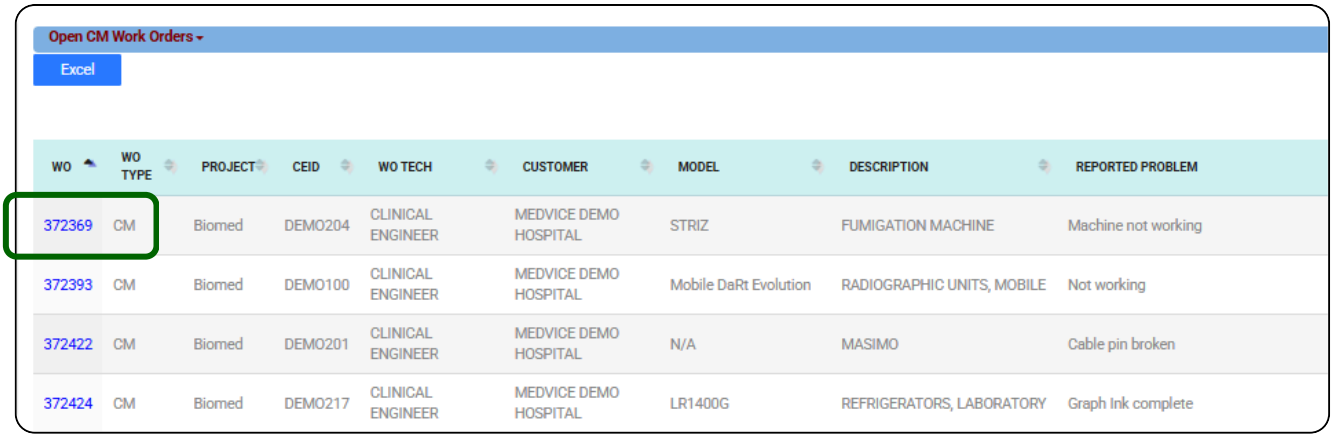


Under the Service Management section, select CM Work Orders List.

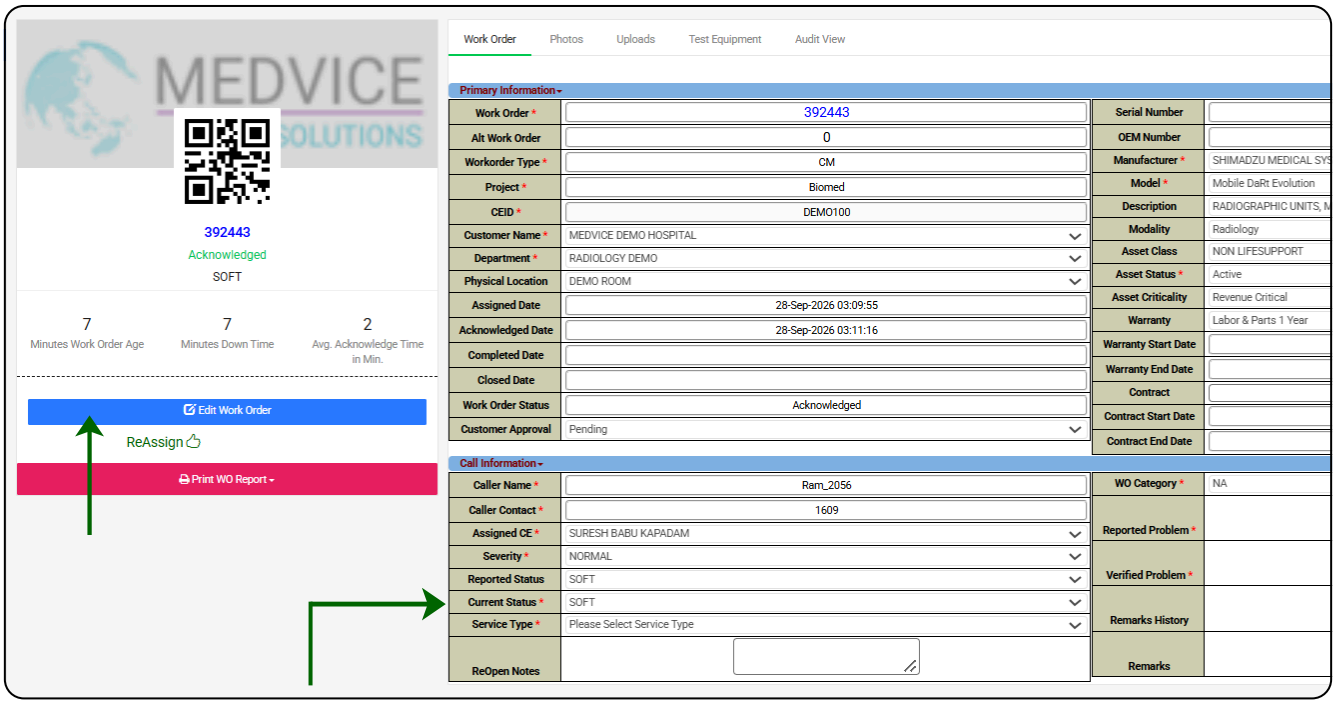


CM Work Orders List

Select the CM Work Orders List tab to access the CM Work Orders page, as shown in the image below.



Select the respective Work Order Number to access the detailed Work Order page, as shown in the image below.

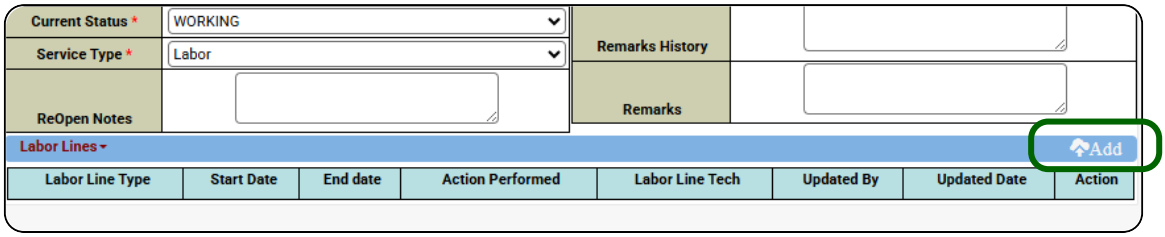


Edit Work Order Current Status

Add Labour line

Initially, the Labour Lines section will not be displayed. Select Edit Work Order and update the Current Status to Working. The Labour Lines section will then be displayed.

Select Add to open the Add Labour Line pop-up window.



In the Add Labour Line Pop-up, specify the Labor line type, relevant Date and Time, and select the applicable Labour Line Type based on the technician's activity.

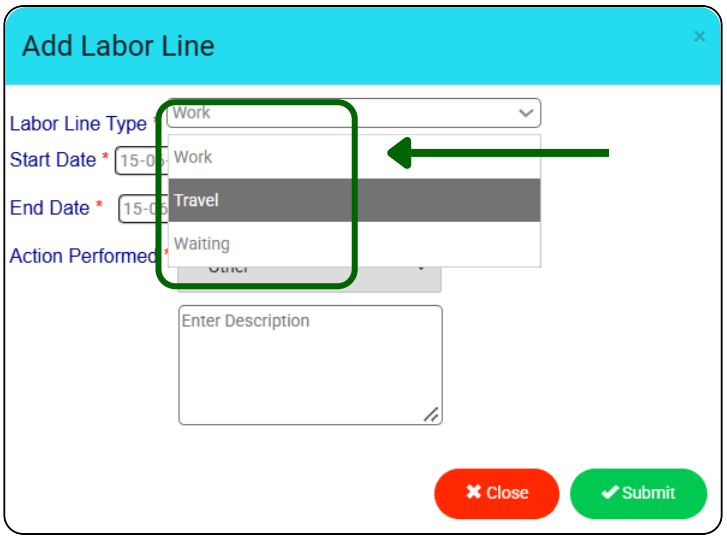
Labor line types

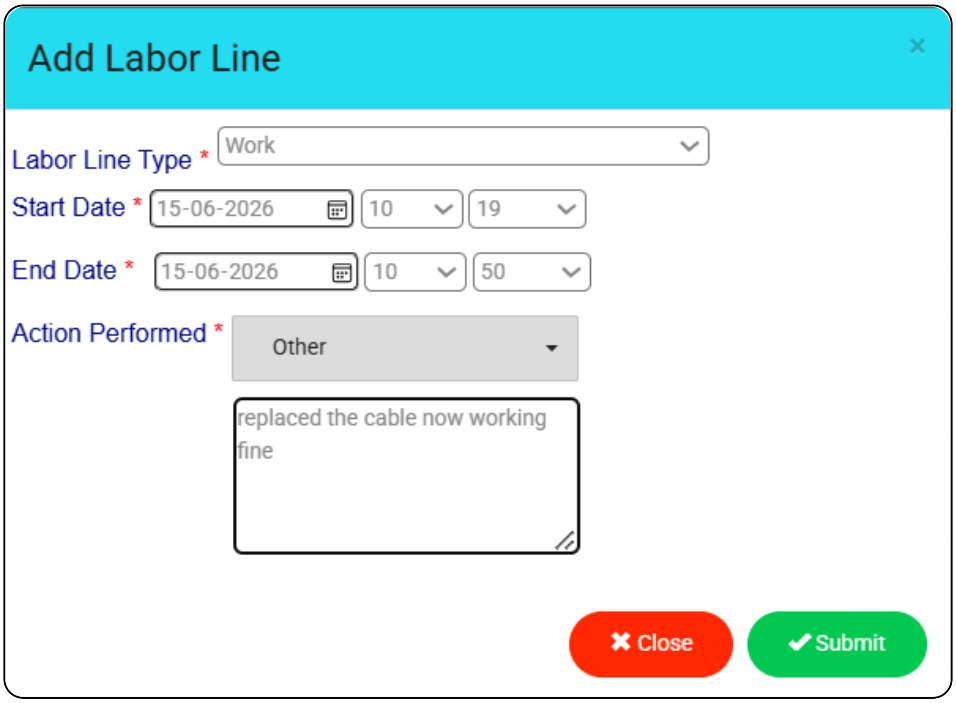
- **Work:** Select when the technician has reached the designated department or location and has commenced work on the equipment.

- **Travel:** Select when the technician is travelling to the designated department or location to attend the equipment and work has not yet commenced.

- **Waiting:** Select when the technician is awaiting confirmation, authorization, approval, equipment access, or any other required action before commencing the work.

Select the appropriate Labour Line Type based on the Technician's activity. Use Travel and Waiting when applicable for multi-location assignments. Accurate activity entries support tracking of equipment uptime and Labour Hours.

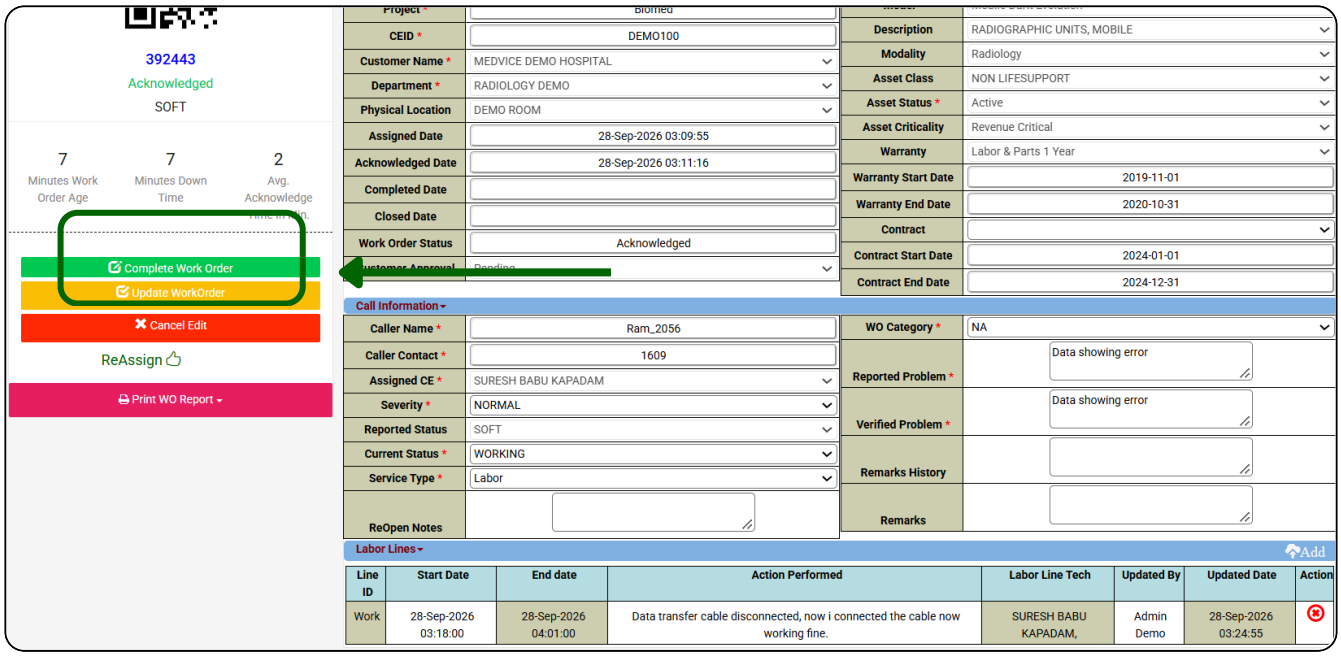




Specify the Start Date, Start Time, End Date, and End Time based on the actual duration of the activity. Under Action Performed, select the applicable activity for the equipment and record the actual work performed. Include relevant observations or remarks, such as "Equipment checked and found to be working fine" where applicable.

Completing CM Work Order

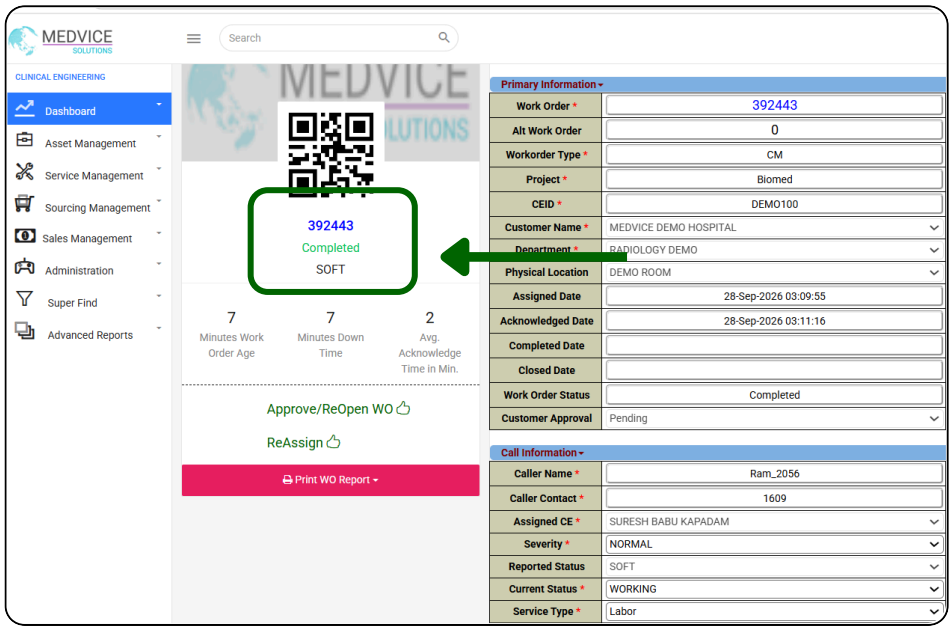
To complete the Work Order, select Complete Work Order.



A confirmation pop-up will be displayed. Select Submit to finalize the Work Order, as shown in the images below.

MEDVICE SOLUTIONS

Once the Work Order is completed, the Status will be updated to Complete, as shown in the image below.

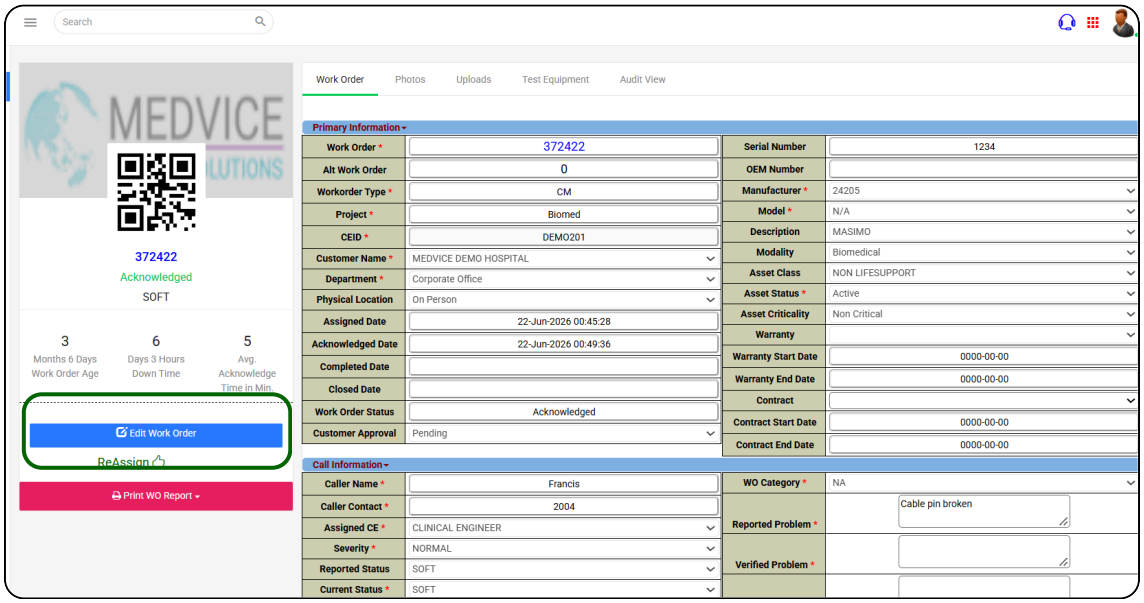


Upon completion of the Work Order, proceed with the Approval process. Work Order Closure can be performed only by authorized users, including designated Managers, Engineers, or Department Heads.

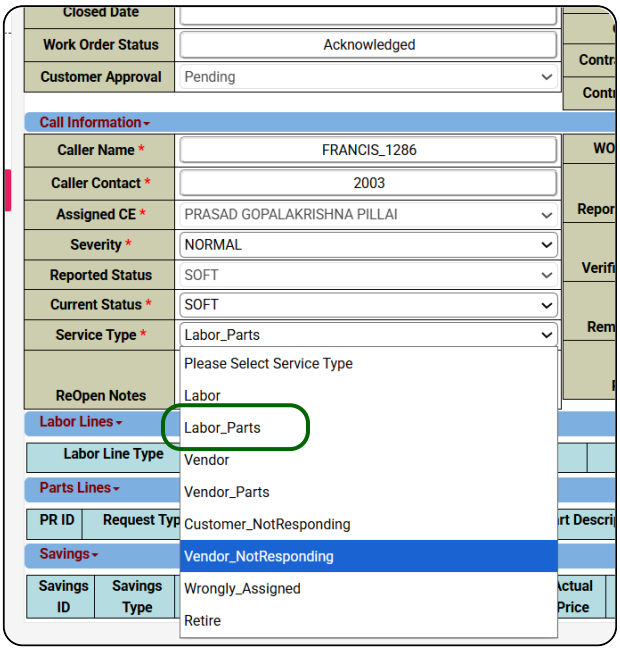
Completing CM Work Orders With Part

Work Orders With Part

Select the respective Work Order (WO) for which the Part Request is to be raised. Select Labour Parts as the Service Type, then add the required parts under the Labour Line section.

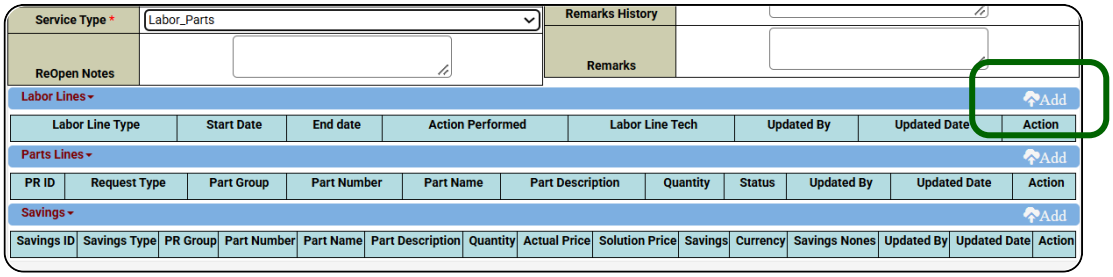


Select Labour_Parts as the Service Type.

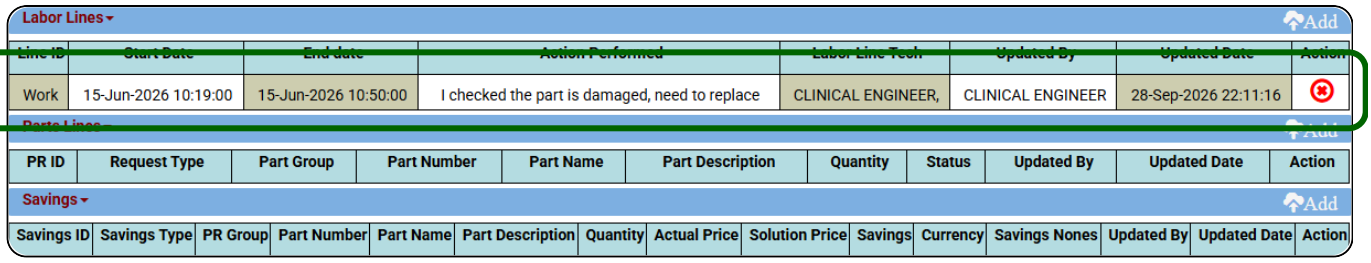


MEDVICE SOLUTIONS

The Labour Lines, Part Lines, and Savings sections will then be displayed, as shown in the image below.

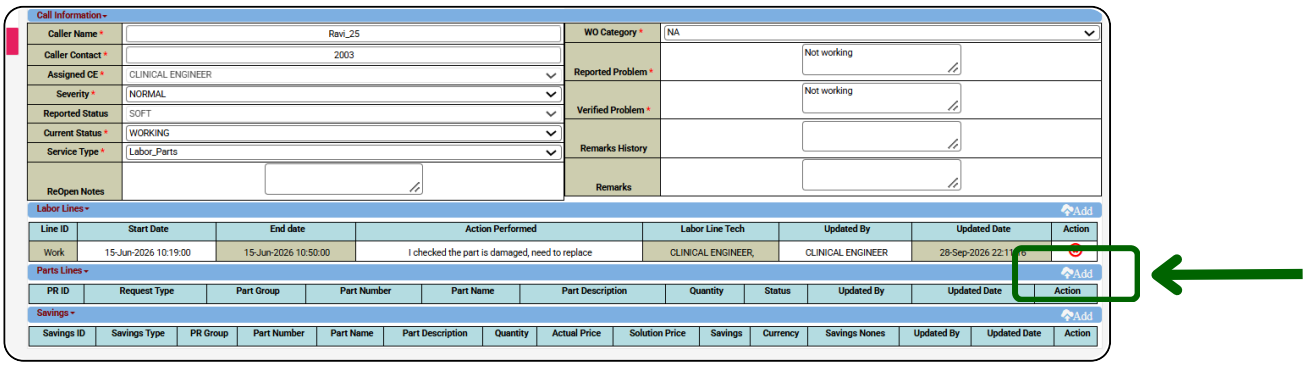


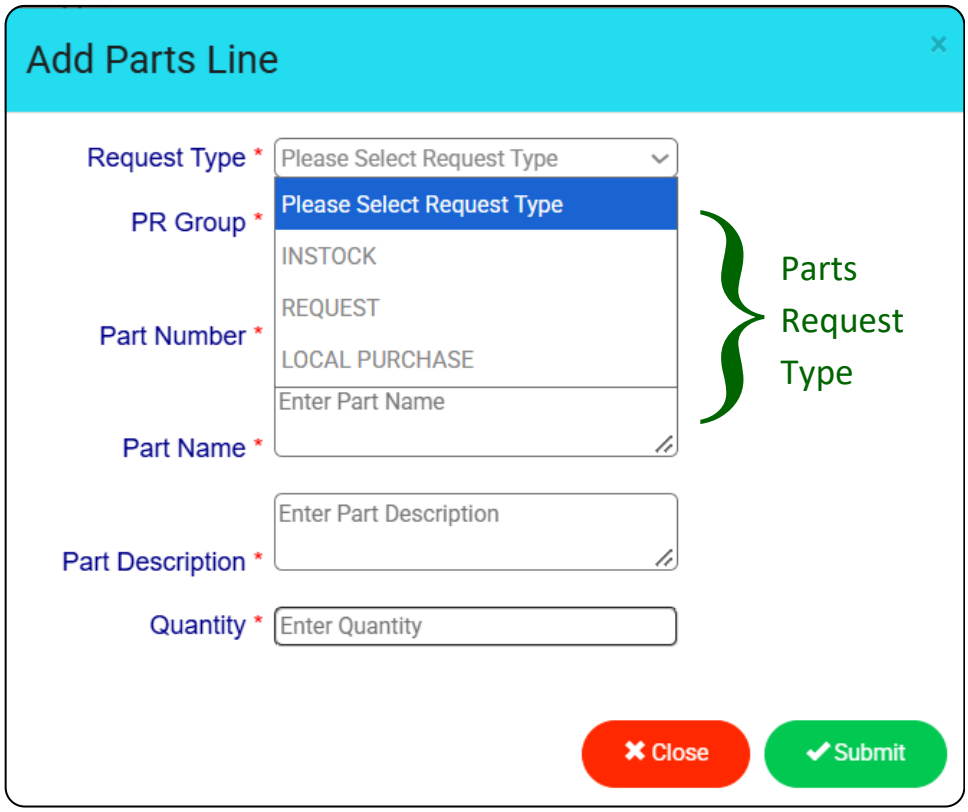
Add the Labour Line after assessing the asset and identifying the need for a spare part. Record the complete details of the assessment under Action Performed, along with the time taken to identify the issue.



MEDVICE SOLUTIONS

To add a new part, select Add in the Part Lines section.
The Add Part pop-up window will be displayed, allowing you to specify the required part details.





MEDVICE SOLUTIONS

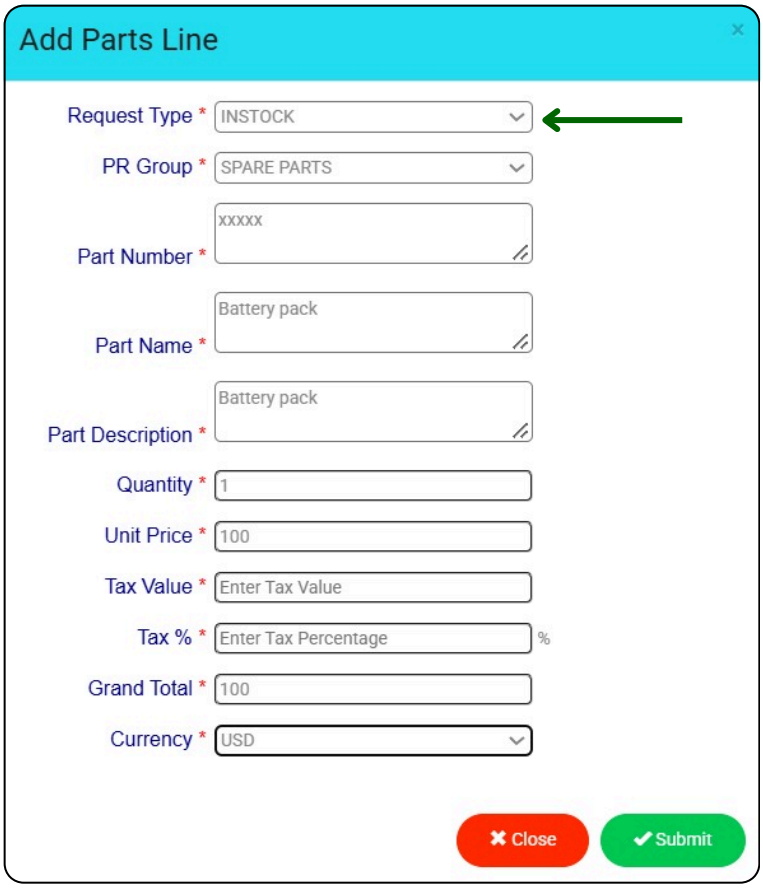
Requesting Parts Lines

Select the appropriate Request Type based on the service requirement. Each request type follows a specific workflow and serves a distinct purpose. The criteria and process for each request type are detailed in the following sections.

1. InStock
2.Local Purchase
3. Request

1. InStock

If the required part is available in inventory, select In Stock to allocate the available part to complete the Work Order. No additional Part Request is required.



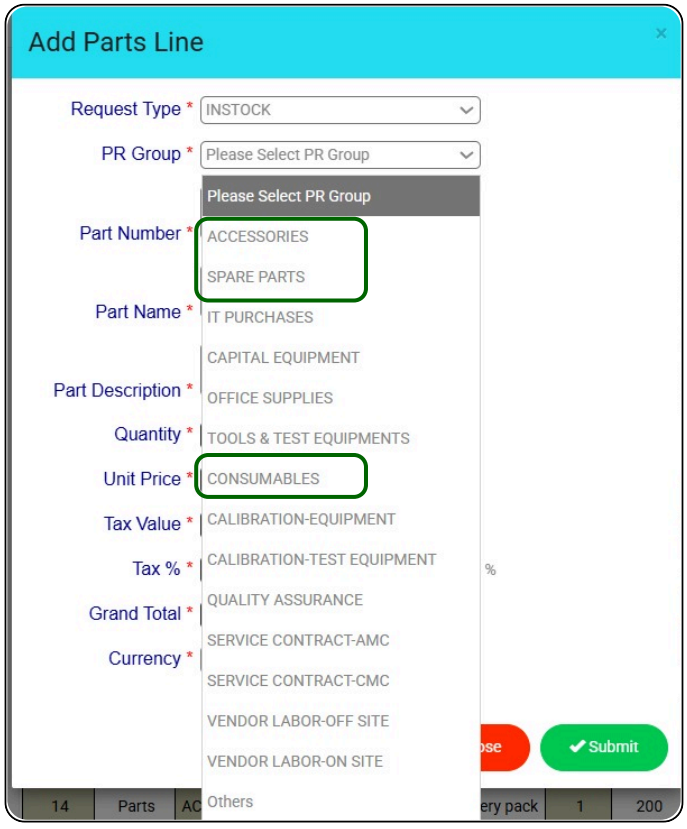
MEDVICE SOLUTIONS

PR Group :

Select the appropriate PR Group based on the part being requested, For In Stock requests, Accessories, Spare, and Consumables are the primary PR Groups to be used.

- **Accessories** – Supporting items used with the equipment.
- **Spare Parts**– Replacement parts required to restore or maintain equipment functionality.
- **Consumables** – Items that are regularly used and require periodic replacement during maintenance.

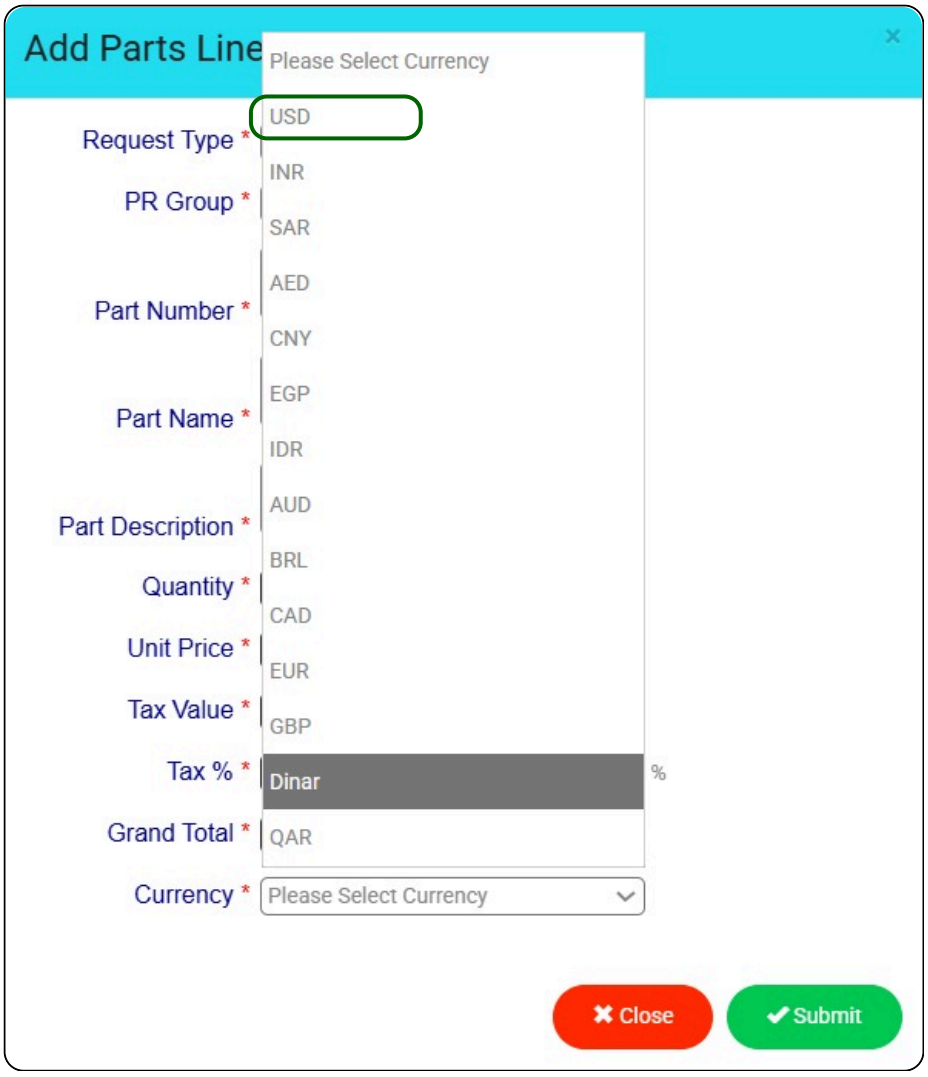
For In Stock requests, select the applicable PR Group and provide the required part details in the relevant fields



Note: The PR Group and Currency selections apply to all three request types: In Stock, Local Purchase, and Part Request. For PR Group, select the applicable option based on the part, with Accessories, Spare, and Consumables as the primary options.

Currency :

Select the appropriate Currency based on the applicable country or region. USD may be used as the primary currency, while other available currencies can be selected based on the operating location.



Note: The Currency selection applies to all three request types: In Stock, Local Purchase, and Part Request. Select USD as the primary currency or choose the applicable currency based on the operating country or region.

After completing all required fields, select Submit to save the Part Line details. The saved Part Line information will be displayed as shown in the image below.

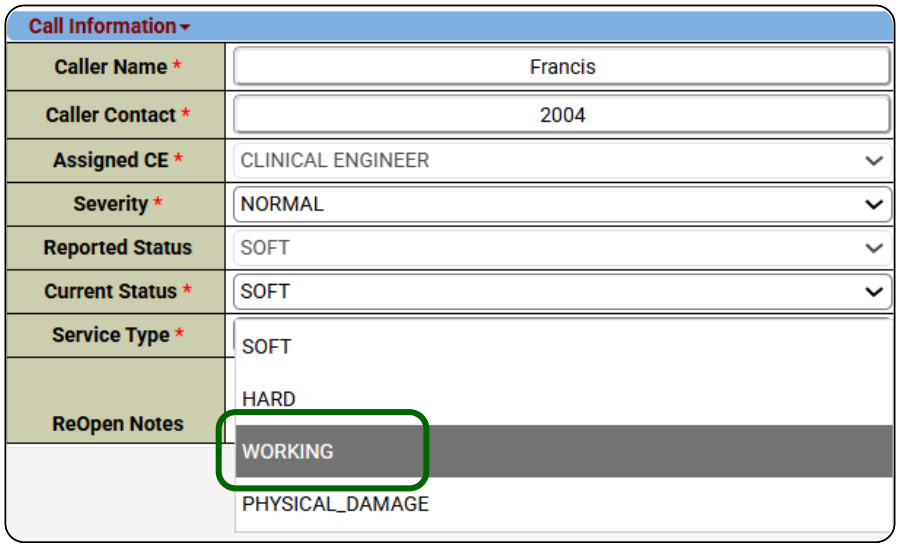
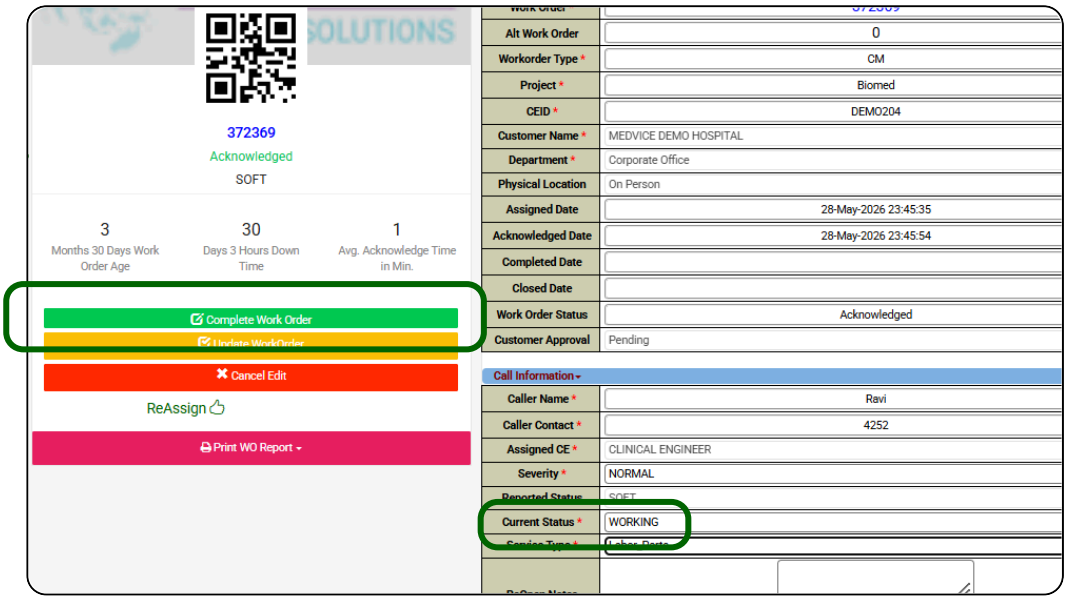
10796	InStock	ACCESSORIES	Battery Pack	NA	Battery Pack	1	Sourcing ACK	OPERATIONS MANAGER	19-Aug-2026 23:33:47	

Note: The Current Status must be updated to Working before the Work Order can be completed.

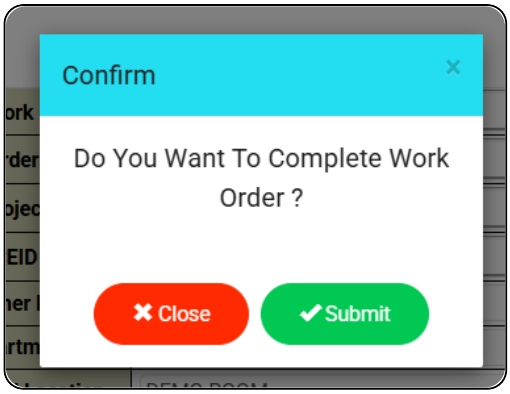


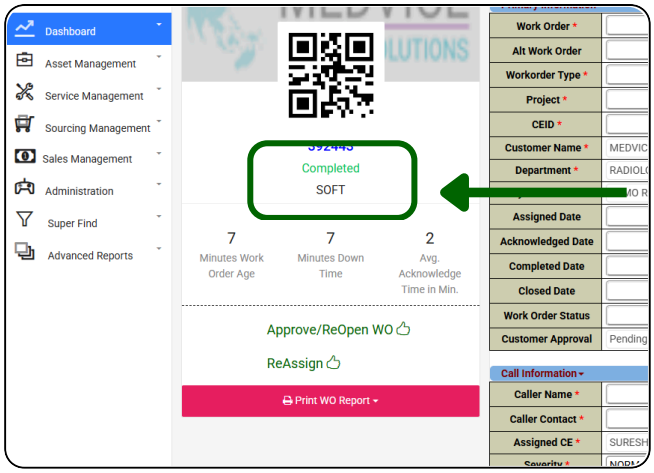
MEDVICE SOLUTIONS

Update the Current Status to Working. Once the status is updated, verify all required details, including the Labour Lines, Part Lines, Part Details, and Part Pricing, and select Complete to finalize the Work Order.



Upon completion, the Work Order Status will be updated to Completed.





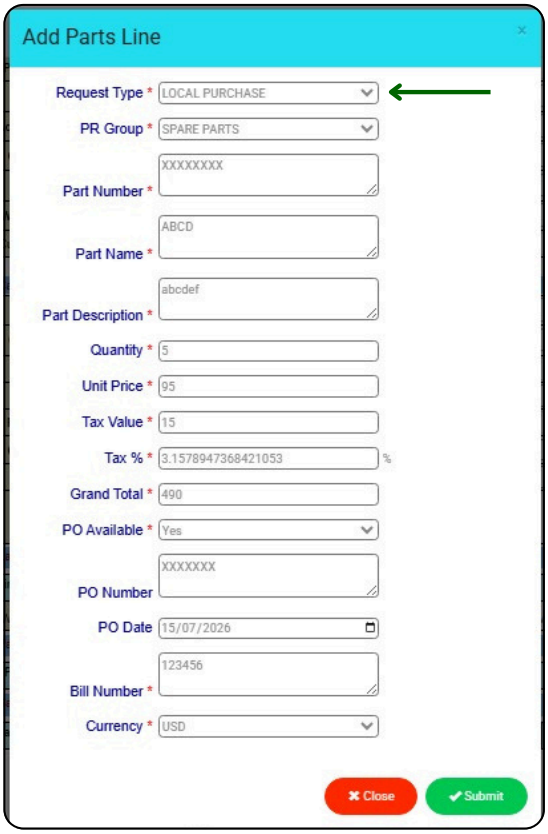
Note: The following complete procedure is applicable to all three Request Types: In Stock, Local Purchase, and Part Request. The same process should be followed for each Request Type, with the applicable fields and requirements completed accordingly.

2. Local Purchase

If the required part is not available in inventory, procure the part through Local Purchase from an authorized supplier or vendor. Obtain the corresponding purchase invoice for the transaction.

Select Local Purchase and specify the required details in the pop-up window, including Part Name, Quantity, Unit Price, Taxes, Invoice Details, and other mandatory fields.

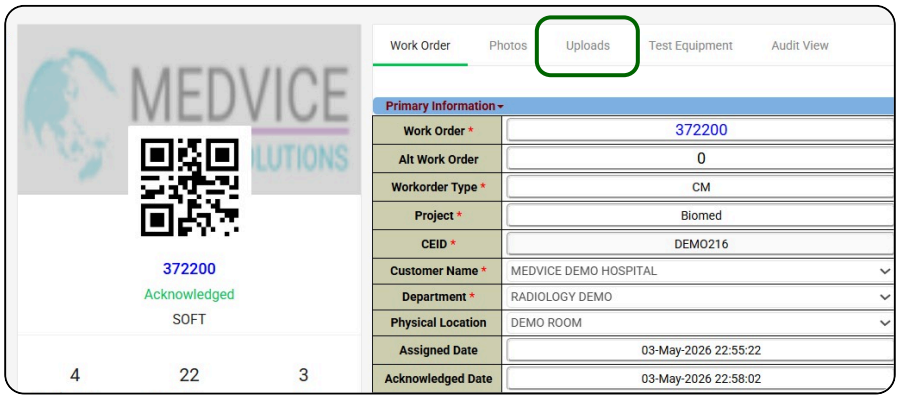
After completing all required fields, select Submit to record the purchase transaction and save the Part Line details. The recorded details will be displayed under Part Lines.



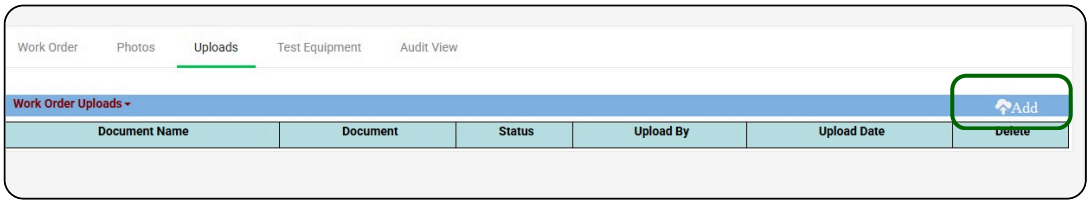
Note: PR Group and Currency apply to all three request types: In Stock, Local Purchase, and Part Request. Refer to pages 43–44 for more details.

Obtain the purchase invoice from the supplier and upload the invoice document in the designated field. Ensure that the invoice details correspond to the purchased part and recorded transaction details.

On the same Work Order page, select the Upload option to attach the purchase invoice.

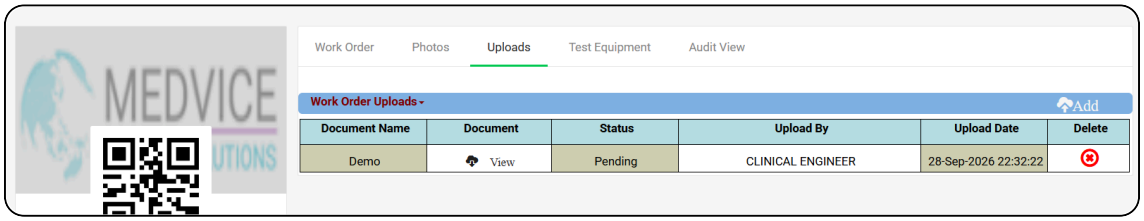


On the Work Order Uploads section, select Add on the left side to upload the purchase invoice.



A pop-up window will be displayed. Attach the required invoice file and select Submit to upload and save the document to the Work Order Uploads section. Only PDF files are supported for invoice uploads.

Once uploaded, the invoice will be stored in the system and can be accessed and viewed from the Work Order Uploads section.



After completing all required fields, select Submit to save the Part Line details. The saved Part Line information will be displayed as shown in the image below.

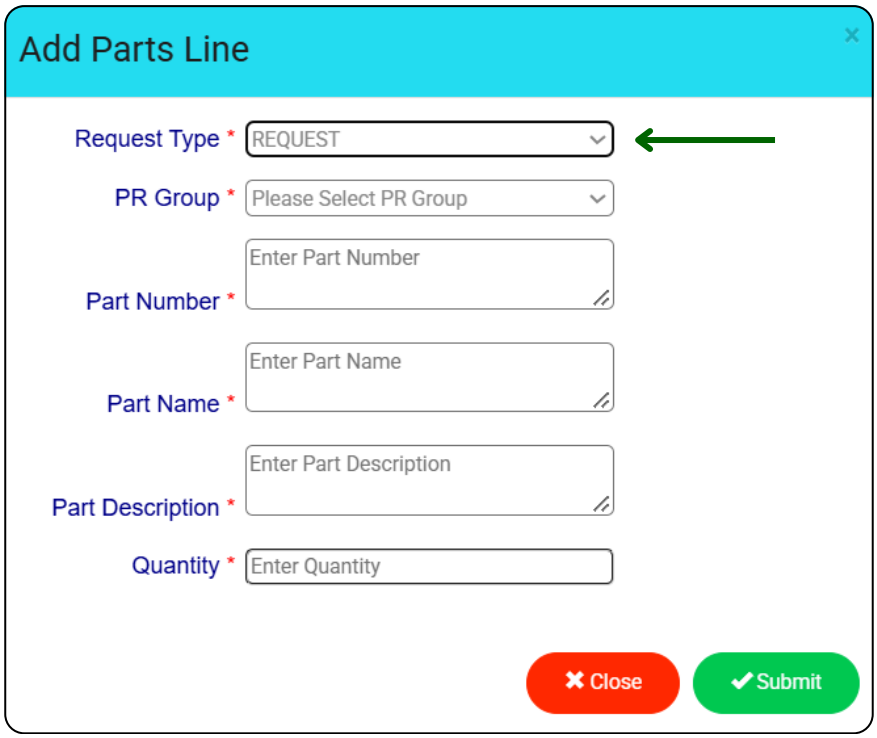
Note: The Work Order completion process is the same for all three Request Types: In Stock, Local Purchase, and Part Request. Follow the same completion procedure described in the In Stock process. For detailed reference, refer to page 46 from the manual.

Reuqest Pop-Up

3. Request

If the required part is unavailable through both In Stock, the technician must raise a Part Request by specifying all required information.



Note: The PR Group field are applicable to all three request types: In Stock, Local Purchase, and Part Request. Select the appropriate PR Group based on the part category. For reference, the corresponding PR Group are detailed on pages 43 of the manual.

Request Email

Upon submission, the Part Request will be forwarded to the Supply Chain team for processing. A Part Request notification will be sent to the designated email address, as shown in the image.

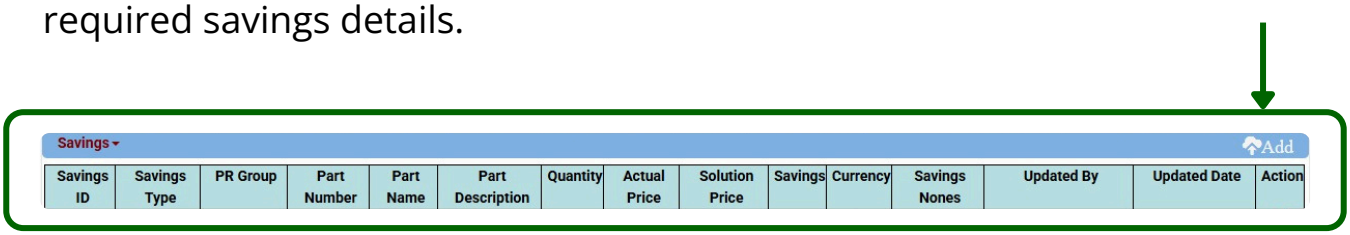
10603	REQUEST	SPARE PARTS	XXXXXXXX	ABCD	abcdef	5	Requested	OPERATIONS MANAGER	15-Jul-2026 00:23:57

3. Savings refers to the cost reduction achieved when an part is procured at a price lower than its original or expected cost.

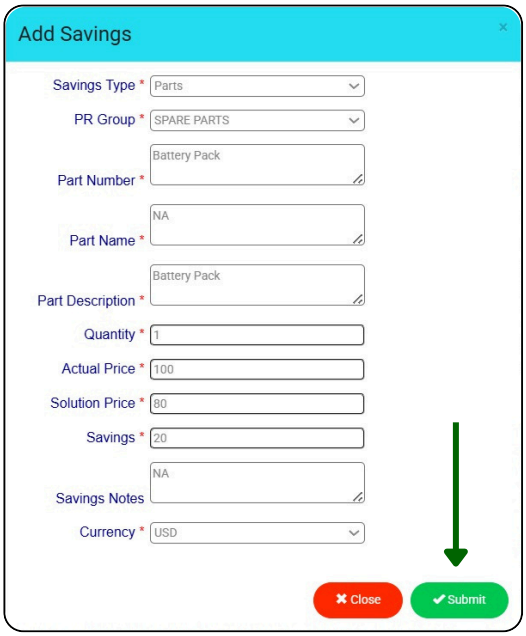
Example: If a part has an original or expected cost of ₹100 and it is purchased for ₹80, the resulting savings is ₹20.

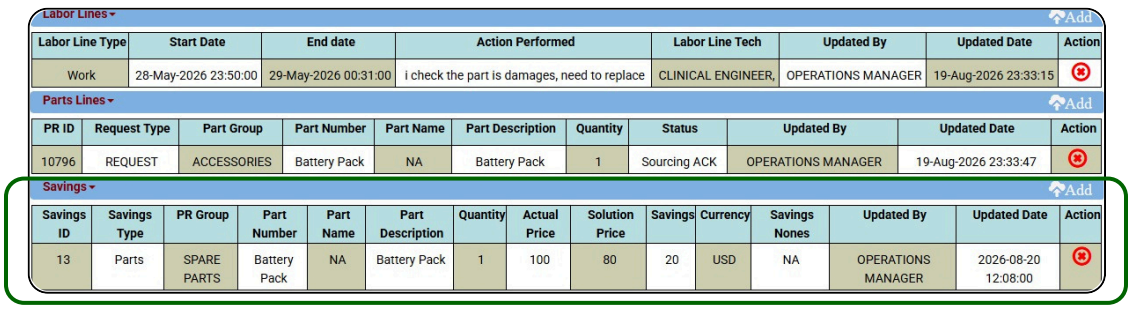
Under Savings, select Add to open the pop-up window and specify the required savings details.



Select the Savings Type and specify the required details, including PR Group(PR Group reference, see pages 43-44), Part Number, Part Name, Quantity, Actual Price, Solution Price, Savings, Notes, and Currency.

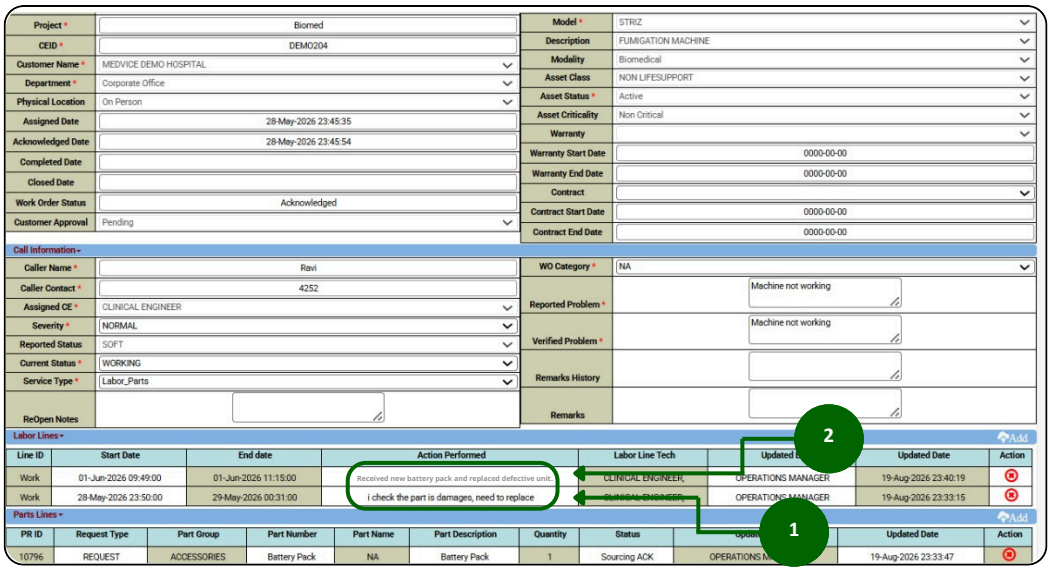
Select Submit to save the recorded savings details.





Once the requested part has been received and the work has been completed, add the second Labour Line to record the completed work.

Once the requested part has been received and the work has been completed, add the second Labour Line with the complete details of the work performed. If the asset is operational after the part replacement, update the status accordingly and ensure the completed Labour Line details are recorded for Supply Chain processing.



Note: The Work Order completion process is the same for all three Request Types: In Stock, Local Purchase, and Part Request. Follow the same completion procedure described in the In Stock process. For detailed reference, refer to page 46 from the manual.

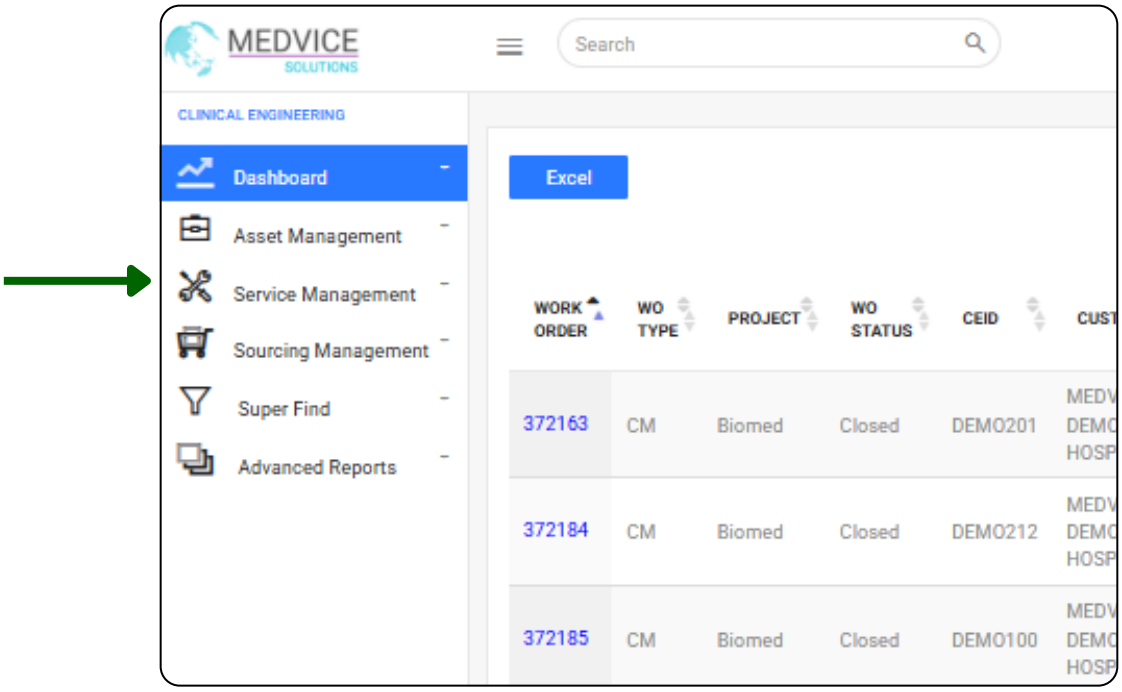
The Work Order has been successfully completed with the required parts added.

Completing PM Work Orders

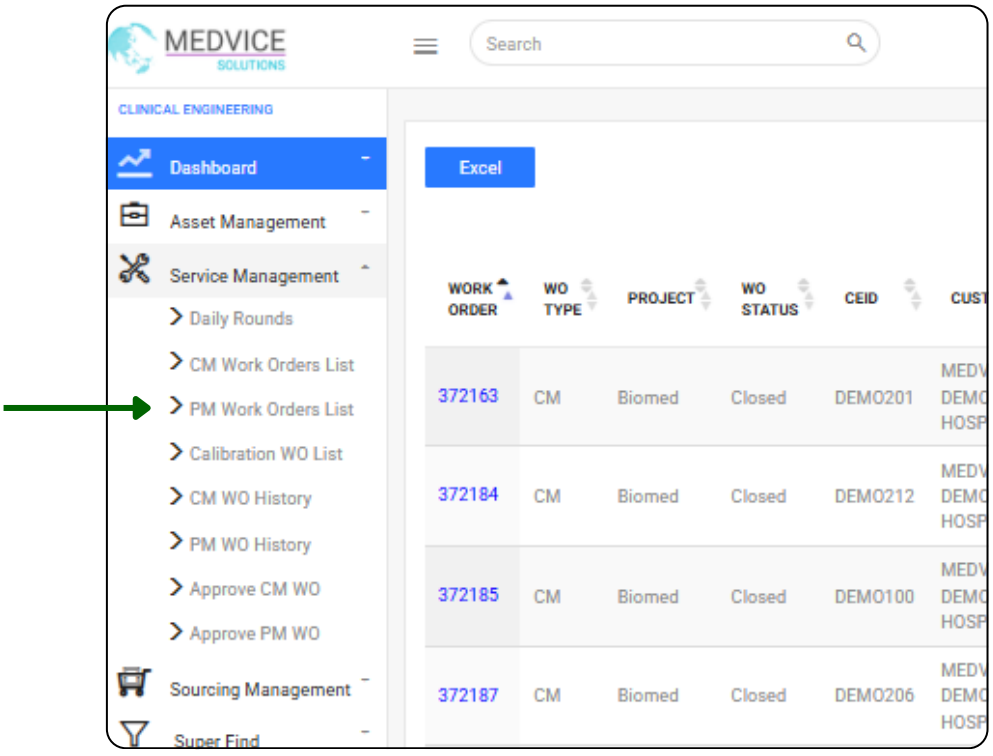
Dashboard

After logging in, the Medvice Insight Dashboard will be displayed, as shown in the image below.

Navigate to the Service Management tab.

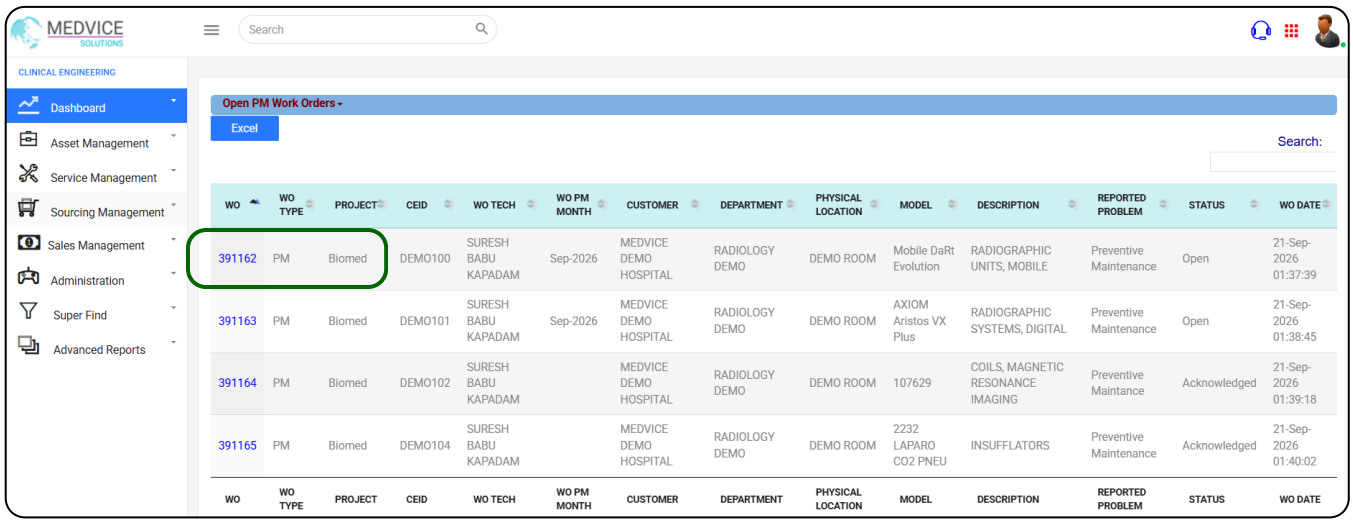


Under the Service Management section, select PM Work Orders List.

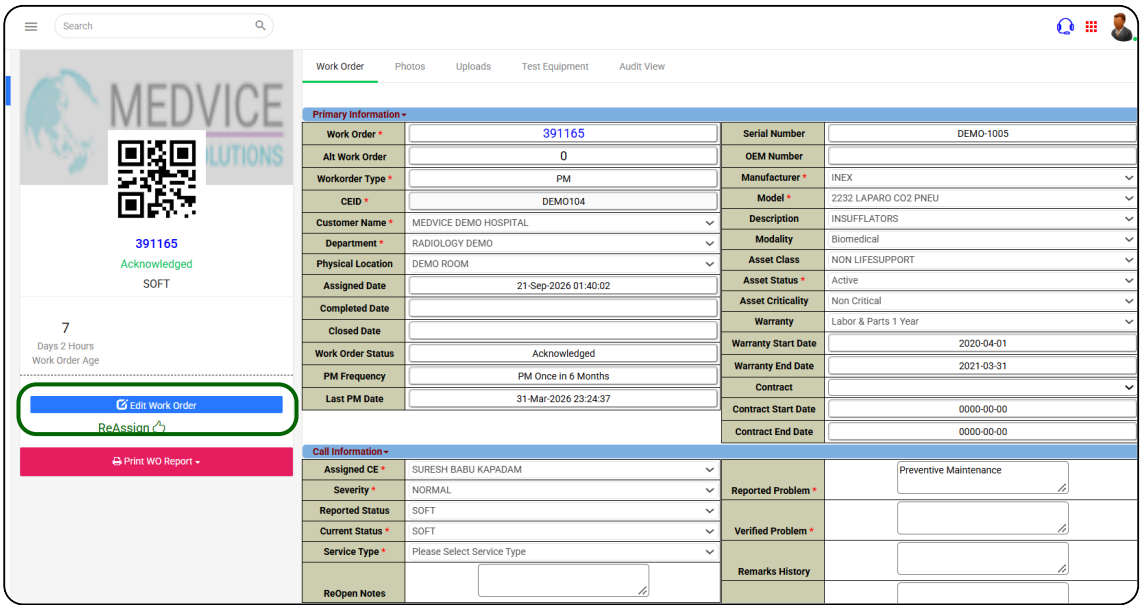


PM Work Orders List

Select the PM Work Orders List tab to access the PM Work Orders page, as shown in the image below.



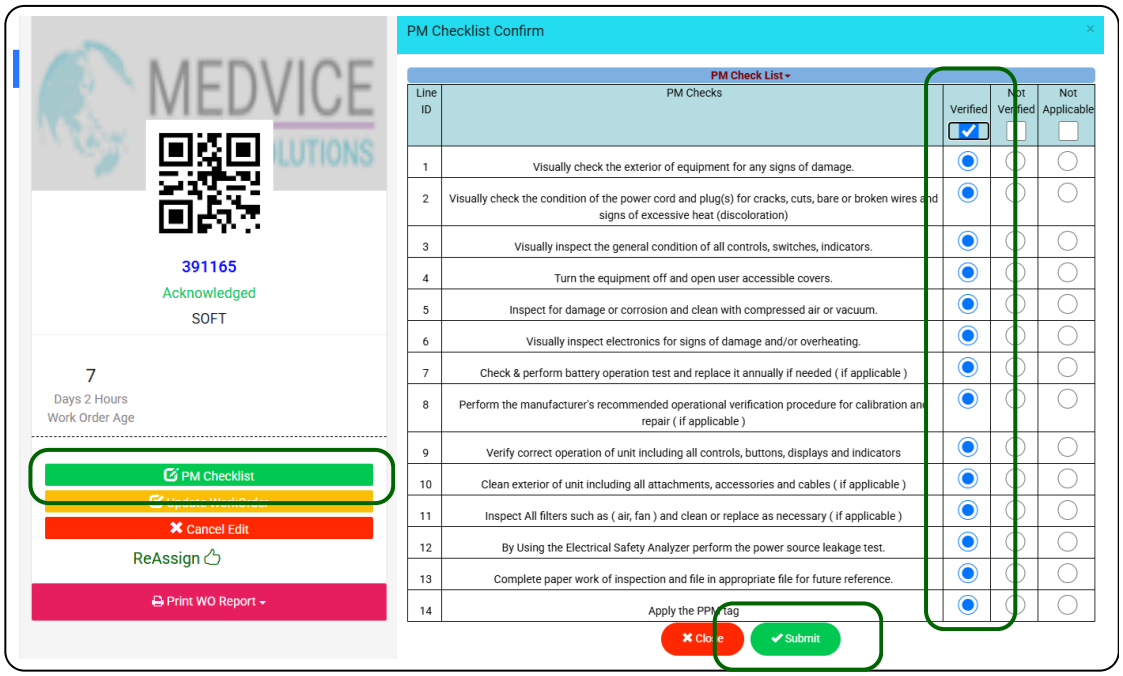
Select the respective Work Order Number to access the detailed Work Order page, as shown in the image below.



Select Edit Work Order to modify the Work Order details.

PM Work Orders List

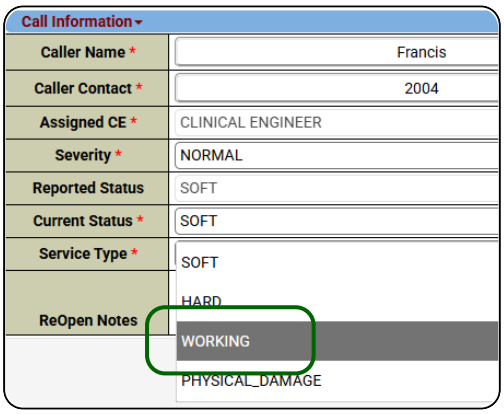
After selecting Edit Work Order, the PM Checklist option will be available. Select PM Checklist to display the checklist, as shown in the image below.

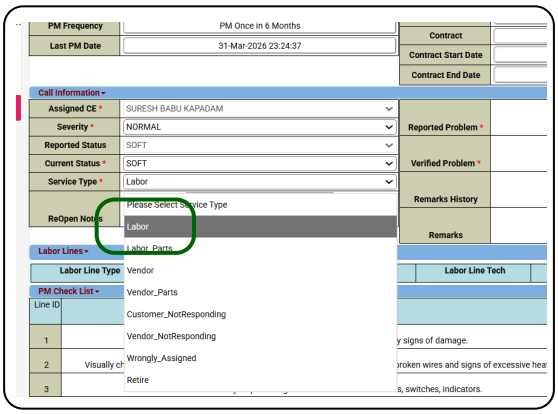


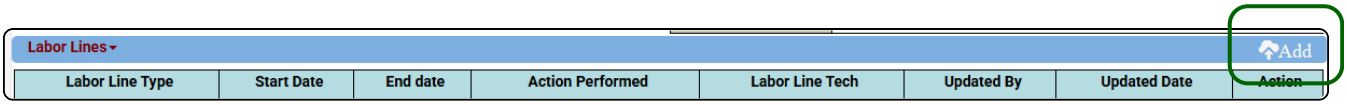
Select the applicable options and select Submit to save the PM Checklist details.

Note:-
Complete the PM Checklist before updating the Labour Line details. If any defect or issue is identified during the PM inspection, create the corresponding CM Work Order for corrective action. The PM Work Order must remain pending until the related CM Work Order is completed. After completion of the CM Work Order, update and complete the PM Work Order accordingly.

After completing the PM Checklist, proceed to add the Labour Line details. Update the Current Status to Working and select Labour as the Service Type.







The Labour Lines section will then be displayed. Select Add to open the Add Labour Line pop-up window. Specify the Date, Time, and Action Performed details, as shown in the image below.

Select Submit to save the Labour Details.

MEDVICE SOLUTIONS

Once the Labor and PM Checklist details have been added, verify that the Labour Line and PM Checklist sections are displayed. After verification, proceed with the Work Order completion process.

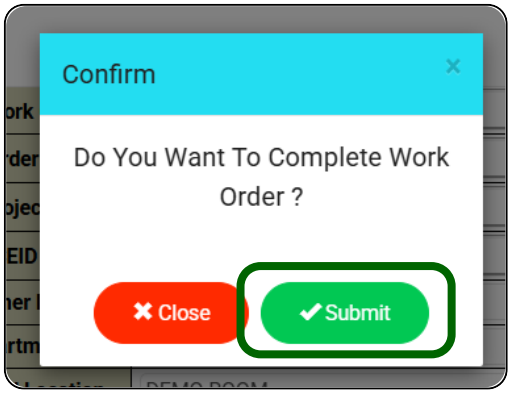
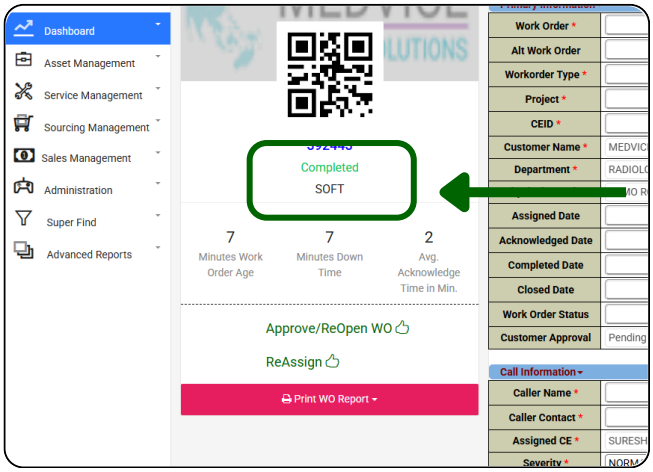
Work	28-Sep-2026 03:18:00	28-Sep-2026 04:01:00	PPM has been carried out as per the OEM standards and checklist attached.	SURESH BABU KAPADAM,	Admin Demo	28-Sep-2026 03:24:55	





Upon completion, the Work Order Status will be updated to Completed.

After completing the Work Order, proceed with the Approval process.

Work Order Closure can be performed only by authorized users, such as designated Managers, Engineers, or Department Heads.

Note:-

The PM Schedule varies by equipment type, maintenance requirements, and procedures specified in the OEM advisory. The frequency and scope of PM activities, including inspections, checks, and servicing, are defined based on the specific requirements of each equipment.

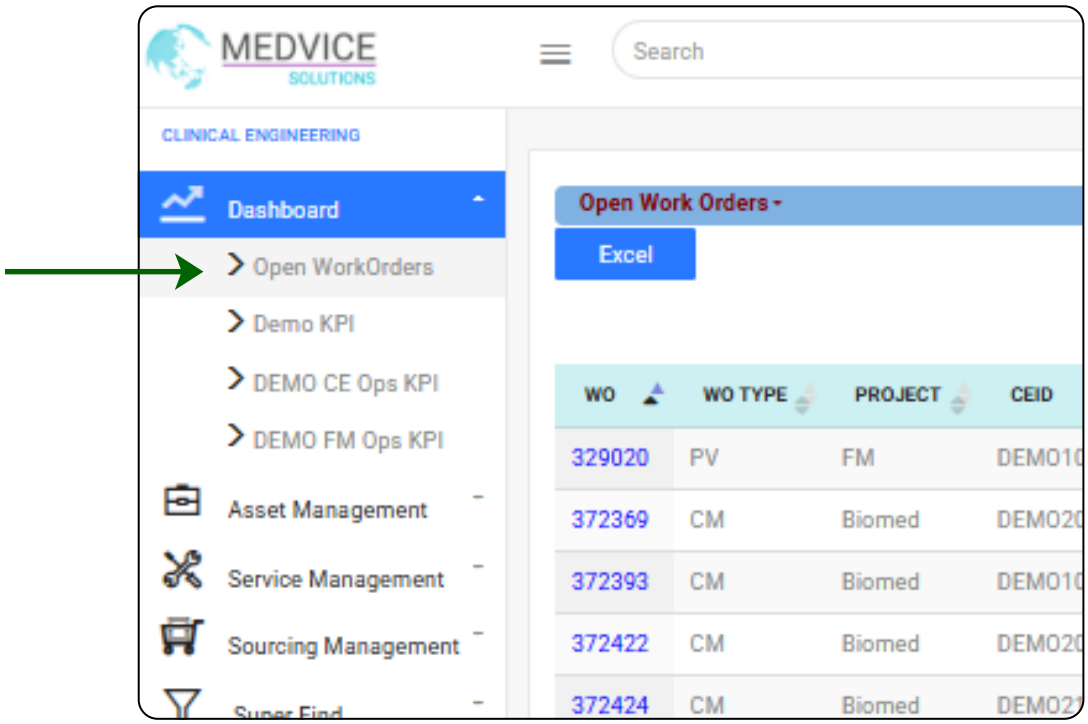
You have now successfully Completed the PM Work Orders.

Completing PV calls

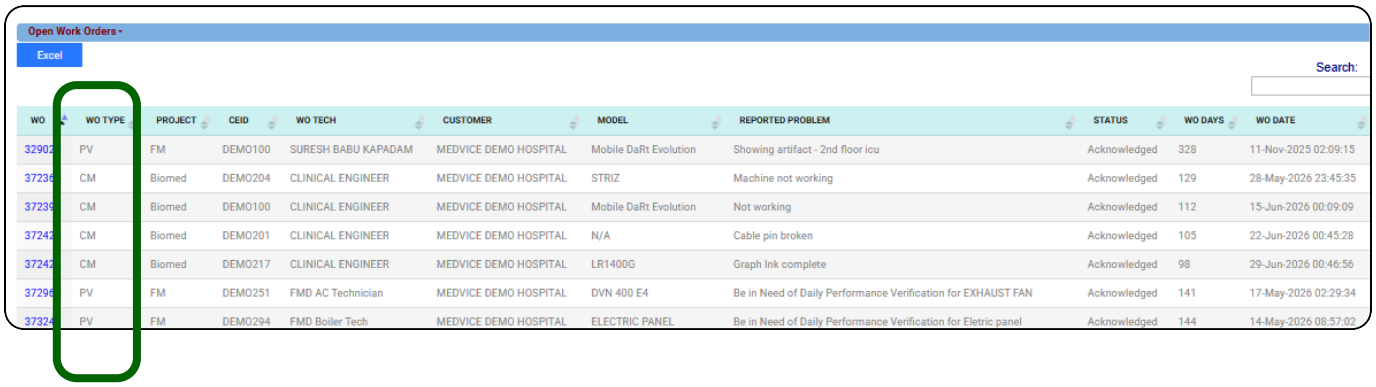
Dashboard

After logging in, the Medvice Insight Dashboard will be displayed, as shown in the image below. Navigate to the Dashboard tab.

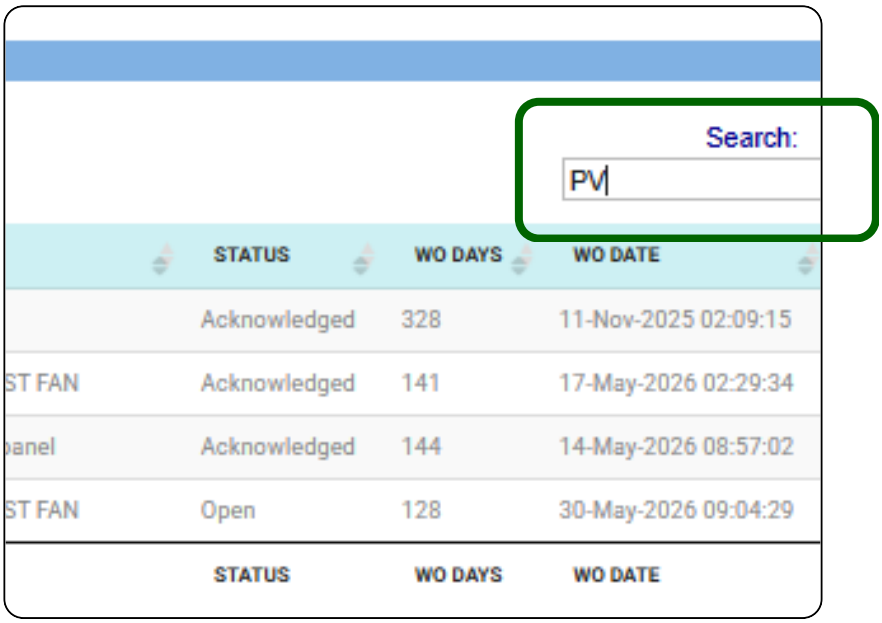
Under the Dashboard section, select Open Work Orders.



Once the Open Work Orders page is displayed, all Work Order types will be listed, as shown in the image below.

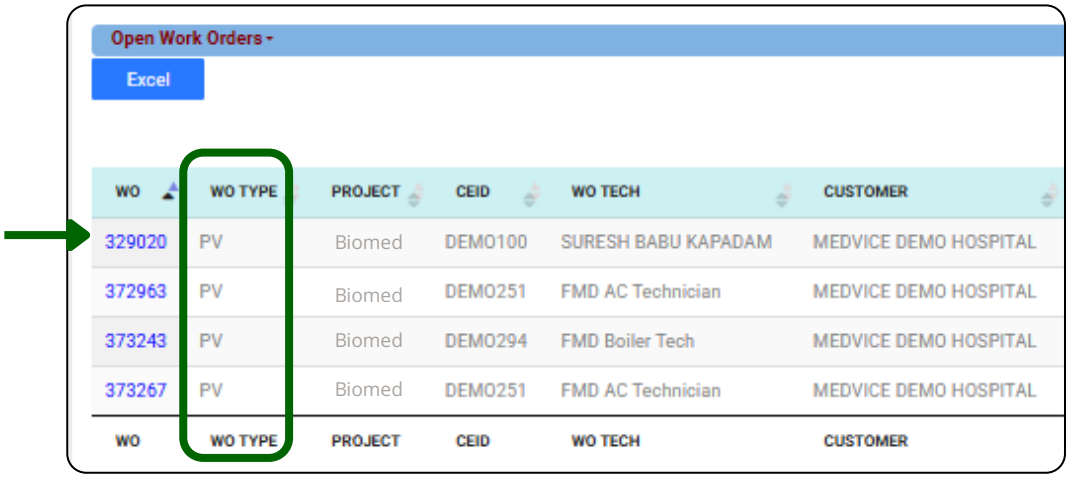


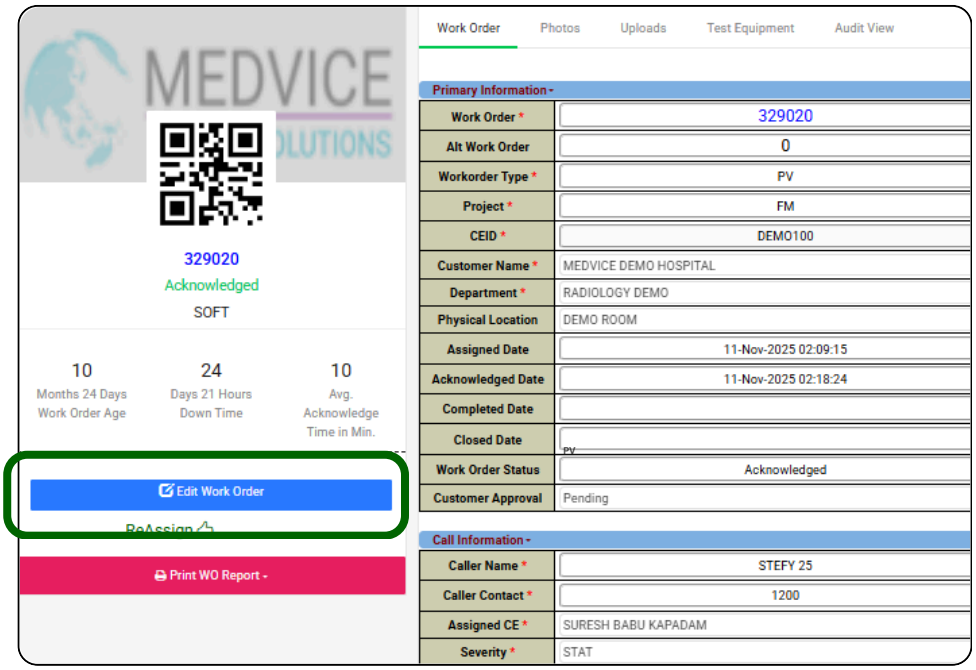
Use the Search bar and specify PV to filter and display the PV Work Orders.



MEDVICE SOLUTIONS

After applying the search, only PV Work Orders will be displayed. Select the respective Work Order to access the detailed Work Order page and proceed with the subsequent steps and procedure.

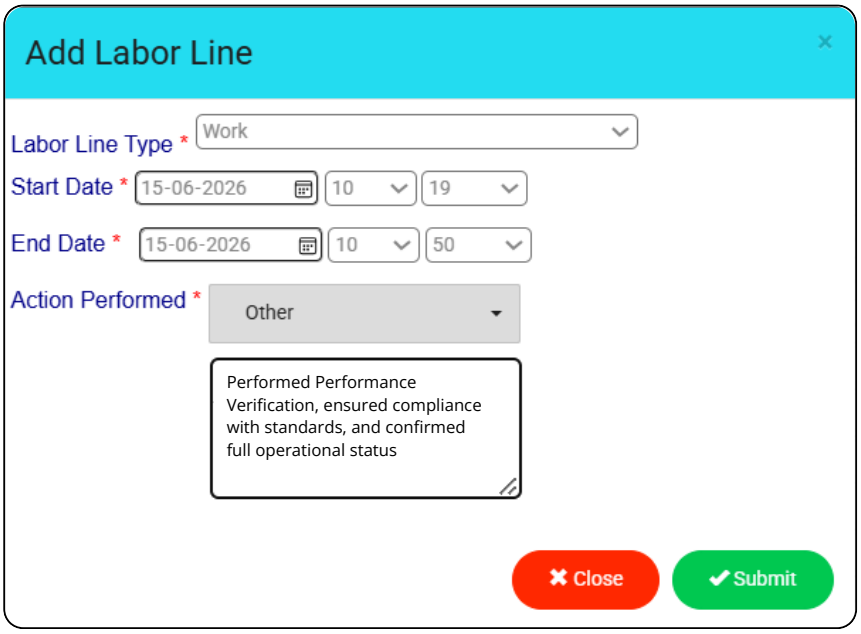




select ‘Edit Work’ Order to proceed with the next step.

Add Labour line

After selecting Edit Work Order, the Add Labour Line pop-up window will be displayed automatically. Specify the appropriate Technician, Date, and Time. The Action Performed field will be automatically populated based on the equipment description. Verify the details and select Submit to save the Labour Details.

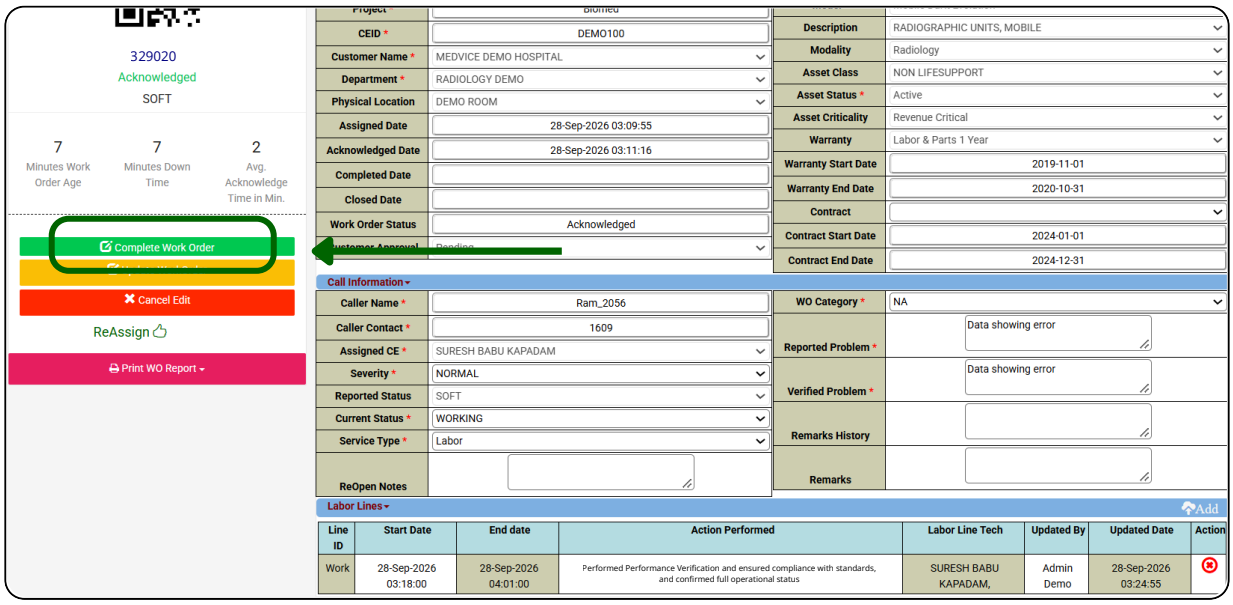


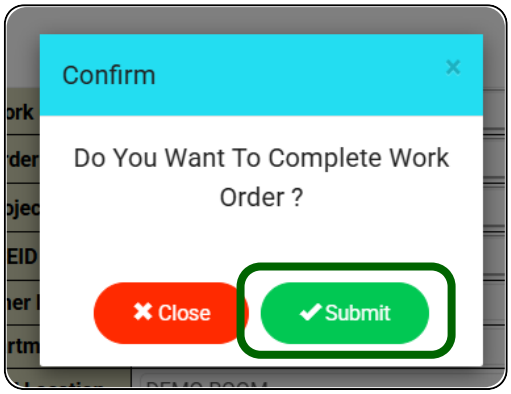
To proceed with the PV Call, assign the appropriate Technician based on the applicable duty shift. Depending on the defined maintenance requirements, equipment may require routine checks once, twice, or three times per day.

Note:-
Technicians are assigned based on their technical specialization, area of responsibility, and duty shift. Assignments are aligned with the equipment type and required maintenance frequency to ensure that scheduled checks are performed by the appropriate technician in accordance with the equipment's maintenance requirements.

Complete PV Work Order

Once the Labour Lines are added to the Work Order, select Complete Work Order to proceed with the Work Order completion process.





After completing the Work Order, proceed with the Approval process.

Work Order Closure can be performed only by authorized users, such as designated Managers, Engineers, or Department Heads.

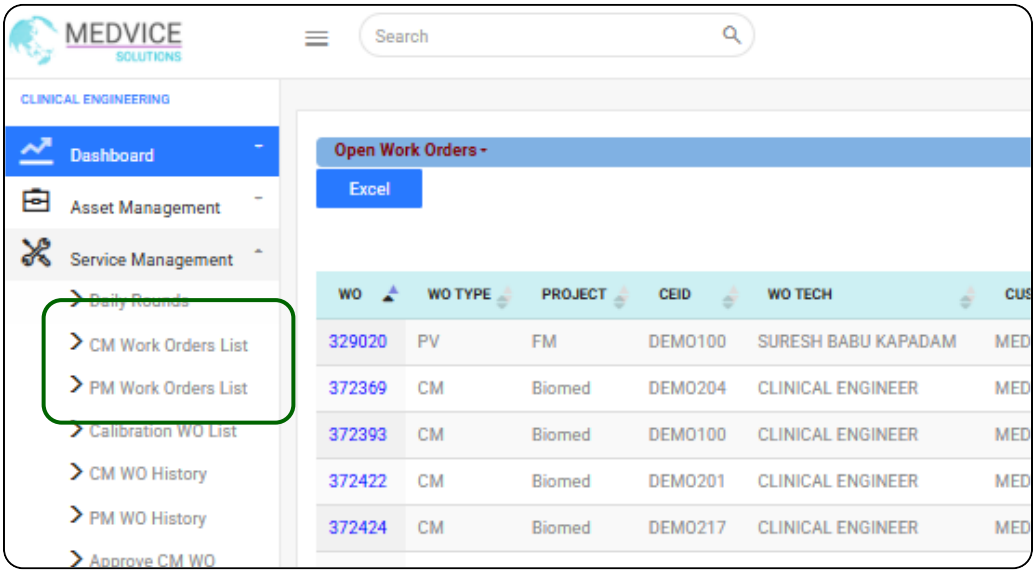
You have now successfully Completed the Open PV Work Orders.

MEDVICE SOLUTIONS

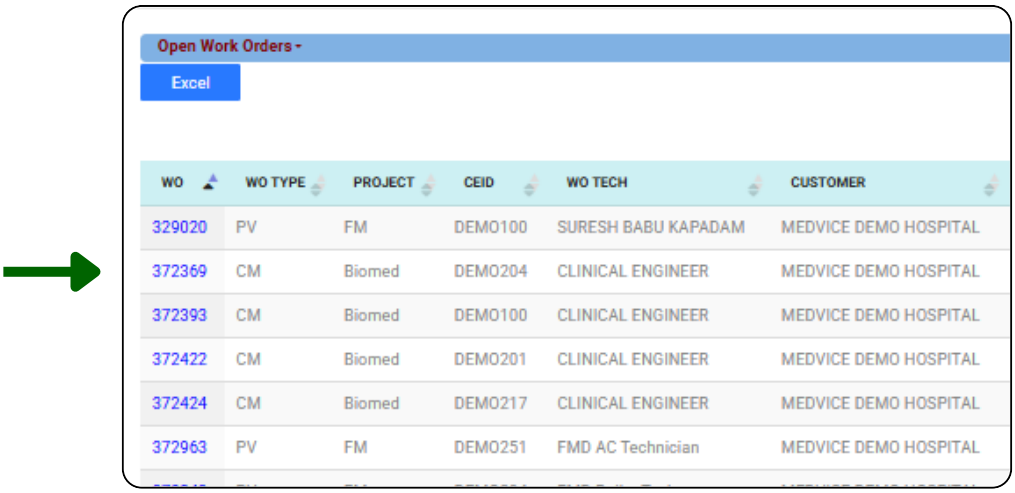
Approve / Reopen Work Order

Navigate to Service Management and select the respective CM or PM Work Order requiring approval. Access the Work Order details and proceed with the Approval process.

For PV Work Orders, follow the same Work Order access procedure described in the preceding sections, Refer to pages 62–64 for the detailed procedure.

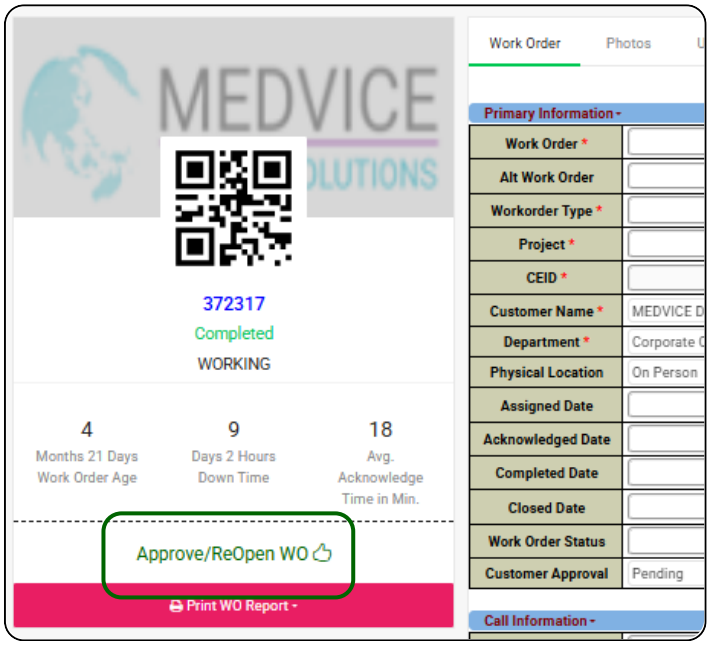


Select the respective Work Order for which the Approval process is to be completed.

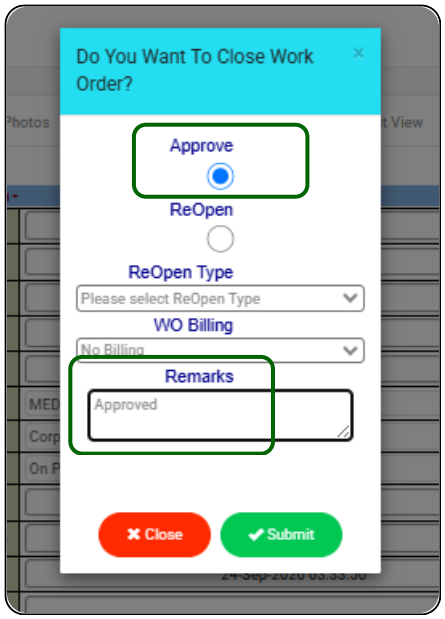


Open the respective Work Order requiring approval. The Manager will review the Work Order as part of the Approval process.

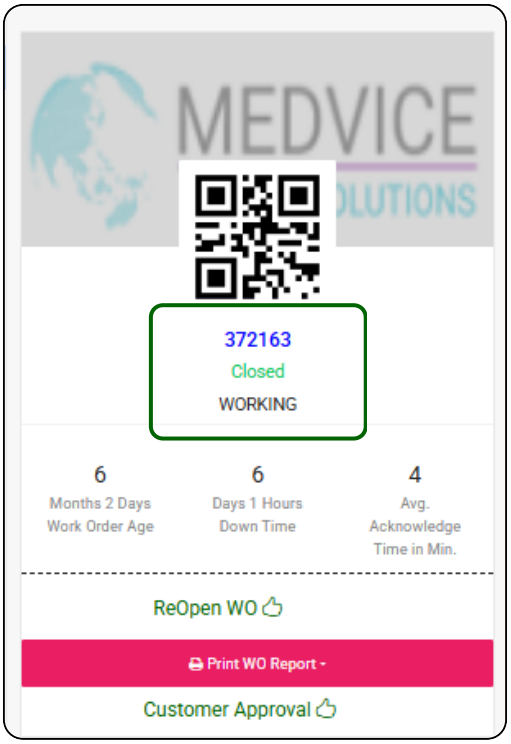
Click Approve from the left-side menu. A pop-up window will appear.



- Select Approve under Approval Status.
- Select the applicable Billing Type and specify Approved in the Remarks field.
- Select Submit to finalize the Approval process.



Note:-
Once the Work Order is approved by the Manager, its status will be updated to Closed, indicating that the Work Order has been formally completed and closed.



The above Approval process applies to all Work Order types.

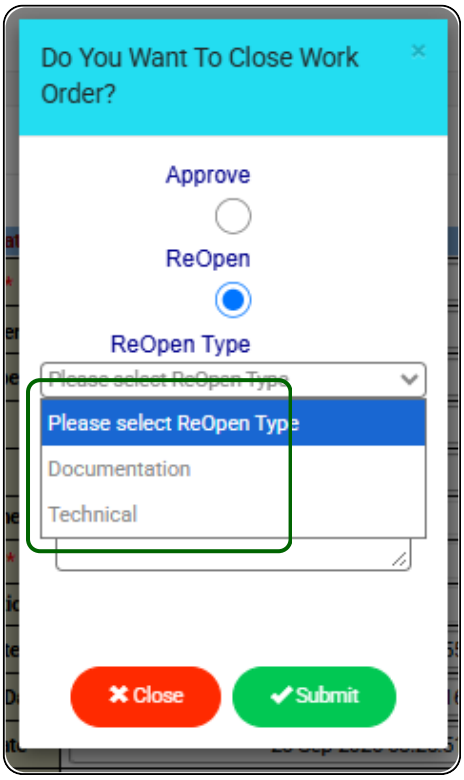
You have now successfully Approved the work orders.

The Reopen process follows the same procedure as the Approval process described above. Navigate to Service Management and access the respective Work Order. Select Reopen from the left-side menu to initiate the Reopen process.

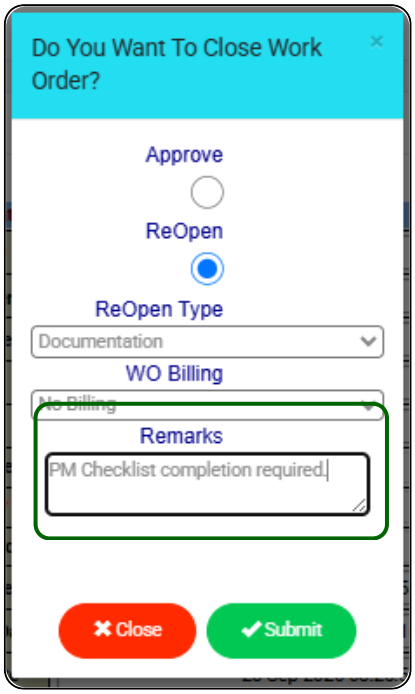
In the Reopen pop-up window, select Reopen and choose the appropriate Reopen Type:

- Documentation: Select when the Work Order requires documentation updates, such as correcting incorrectly entered information, completing a missed PM Checklist, or uploading a missing purchase invoice for a Local Purchase transaction.

- Technical: Select when the equipment requires further technical work because the issue has not been fully resolved or the equipment has not been restored to the required operational condition.



Specify the purpose for reopening the Work Order in the Remarks field and select Submit to reopen the Work Order.



Once the Work Order is reopened, its status will be updated to Reopen, allowing the required documentation or technical work to be completed.

Note: The above Reopen process applies to all Work Order types.

The Work Order has been successfully reopened.

Creating The New Customer

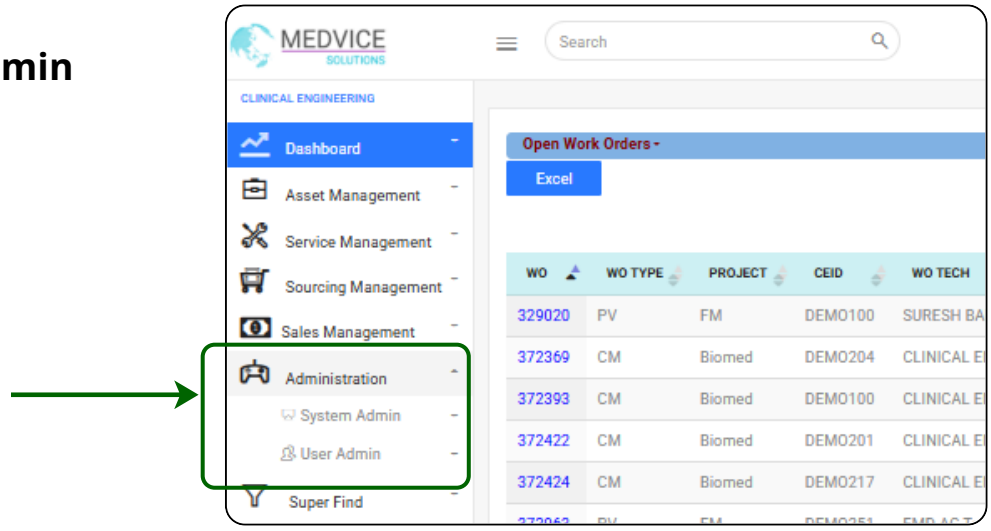
Note:-
Before creating Customer Groups or Customer Profiles, ensure that the complete geographical hierarchy is configured in the required sequence. This ensures data consistency, prevents validation issues, and supports a streamlined setup process.

Dashboard & Administration

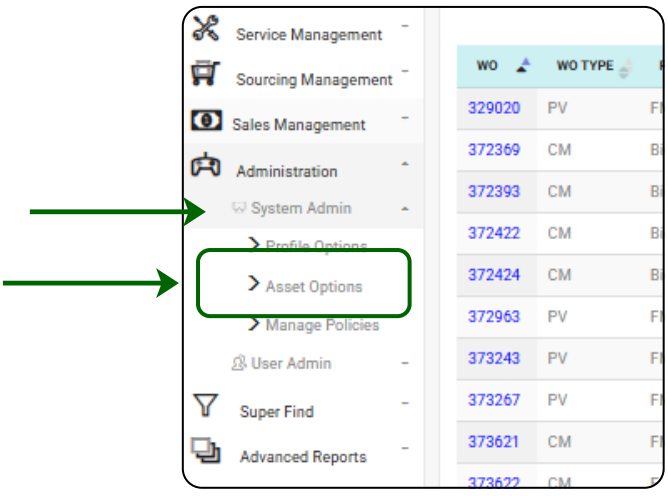
After logging in, the MEDVICE Insight Dashboard will be displayed. The Administration tab is accessible only to Managers and Reference Managers.

Navigate to Administration to access the available options.

1.System Admin

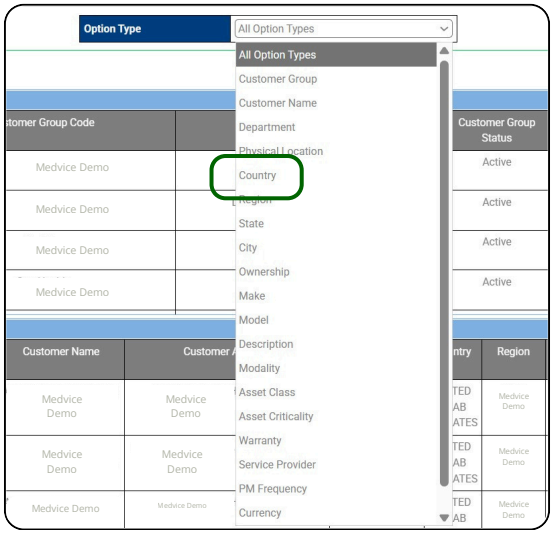


Under the System Admin section, two options are available. Select Asset Options to access the asset configuration settings.

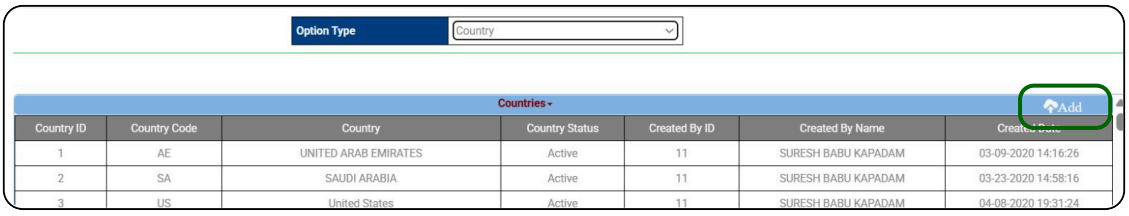


Country

- Navigate to the Asset Options page and select Country from the Option Type drop-down at the top of the page.



- The system will display the list of existing countries. Select + Add in the top-right corner to add a new country.



In the Add Country pop-up window, specify the following details:

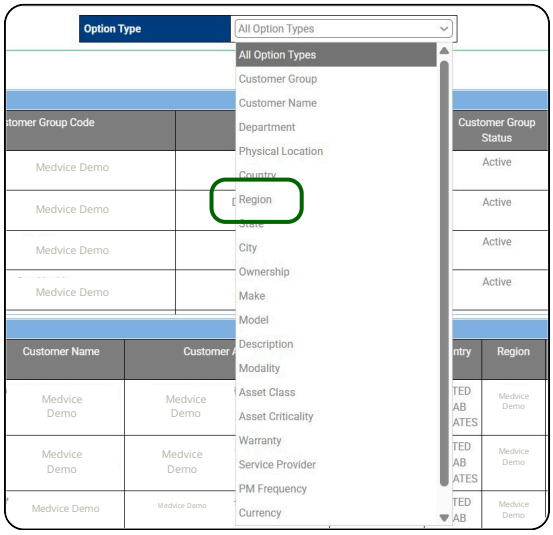
- Country Name: Specify the official name of the country.
- Country Code / ID: Specify the unique internal identifier for the country.

Select Submit to save the country details to the system.

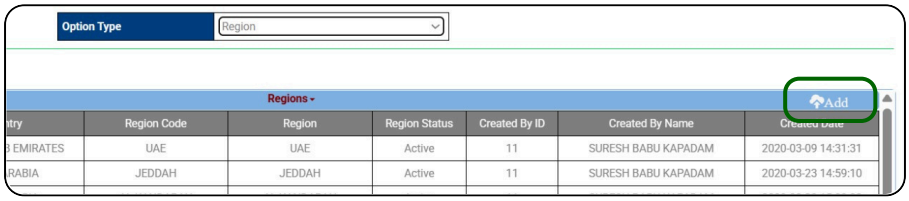
MEDVICE SOLUTIONS

Region

- Navigate to the Asset Options page and select Region from the Option Type drop-down at the top of the page.

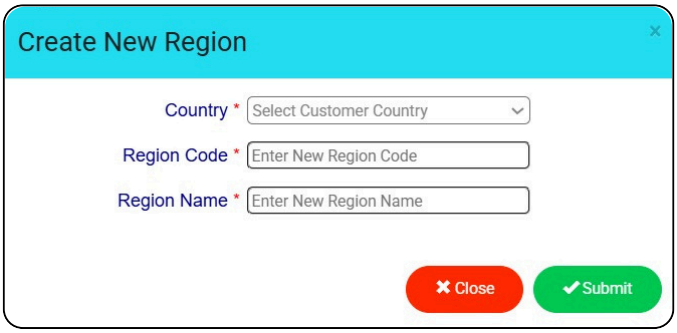


- The system will display the list of existing Regions. Select + Add in the top-right corner to add a new region.



In the Add Regionpop-up window:

- Country: Select the applicable country from the drop-down.
- Region Code: Specify the unique region code.
- Region Name: Specify the region name.

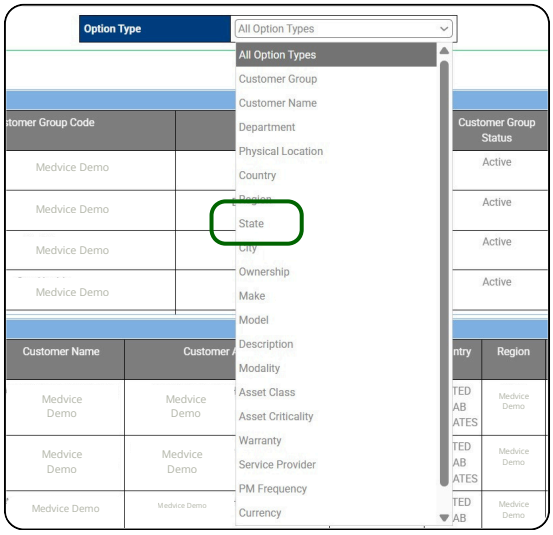


Select Submit to save the Region details to the system.

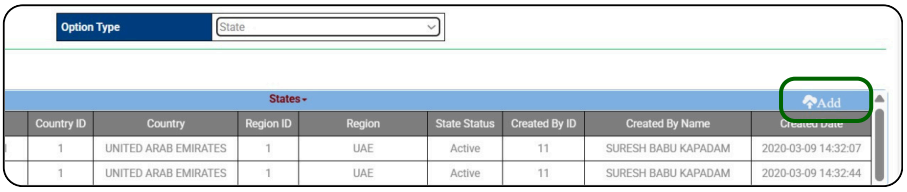
MEDVICE SOLUTIONS

State

- Navigate to the Asset Options page and select State from the Option Type drop-down at the top of the page.



- The system will display the list of existing States. Select + Add in the top-right corner to add a new state.



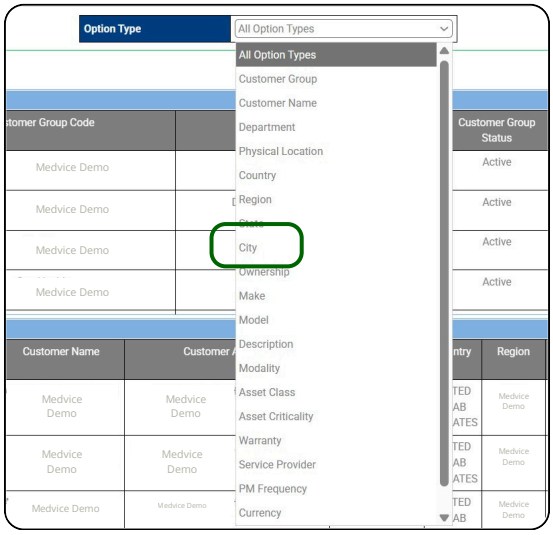
In the Add State pop-up window:

- Country: Select the applicable country from the drop-down.
- Region Code: Select the applicable region from the drop-down.
- State Code: Specify the unique state code.
- State Name: Specify the state name.

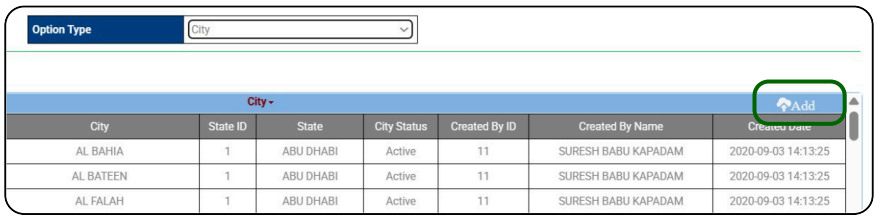
Select Submit to save the State details to the system.

City

- Navigate to the Asset Options page and select City from the Option Type drop-down at the top of the page.

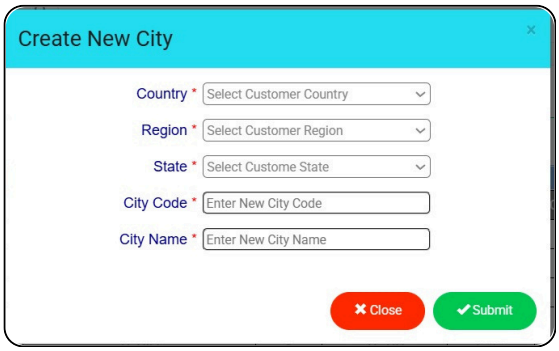


- The system will display the list of existing Cities. Select + Add in the top-right corner to add a new city.



In the Add City pop-up window:

- Country: Select the applicable country from the drop-down.
- Region: Select the applicable region from the drop-down.
- State: Select the applicable state from the drop-down.
- City Code: Specify the unique city code.
- City Name: Specify the city name.

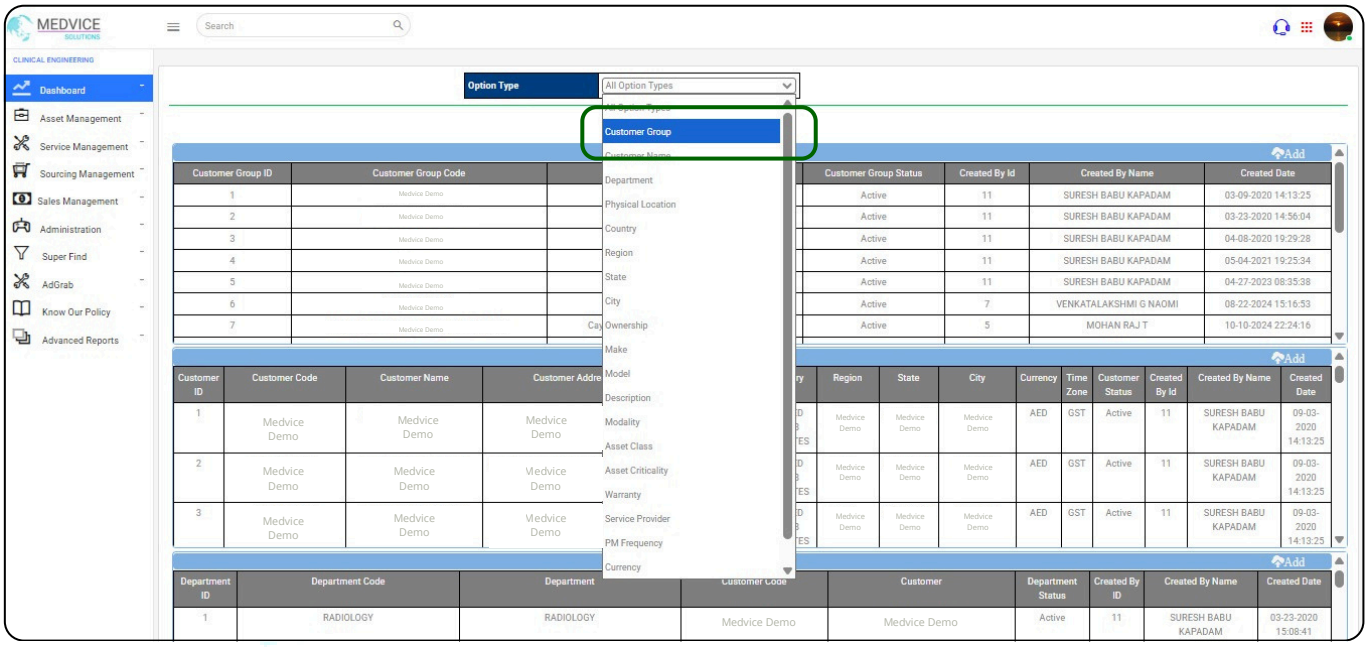


Select Submit to save the City details to the system.

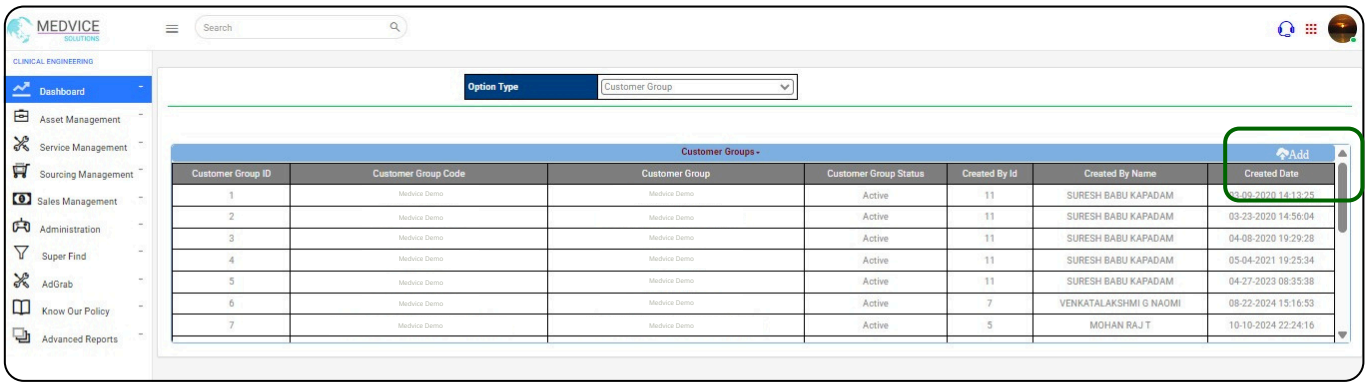
MEDVICE SOLUTIONS

Customer Group Creation

After selecting Asset Options, the corresponding page will be displayed. Select Customer Group from the Option Type field at the top of the page.

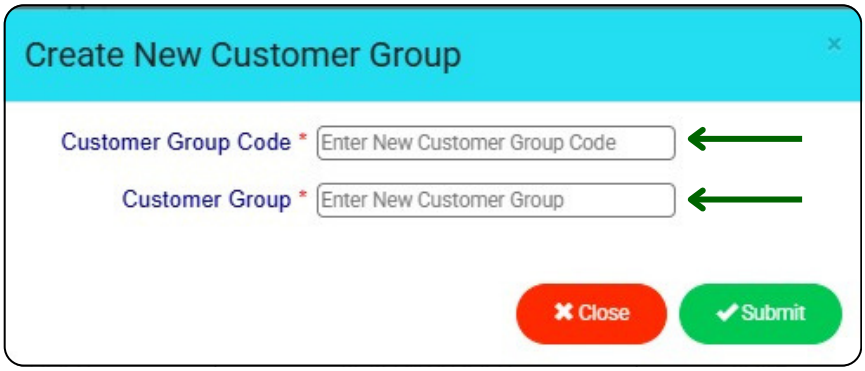


After selecting Customer Group, the system will display the list of existing customer groups. Select Add in the top-right corner to create a new customer group.



MEDVICE SOLUTIONS

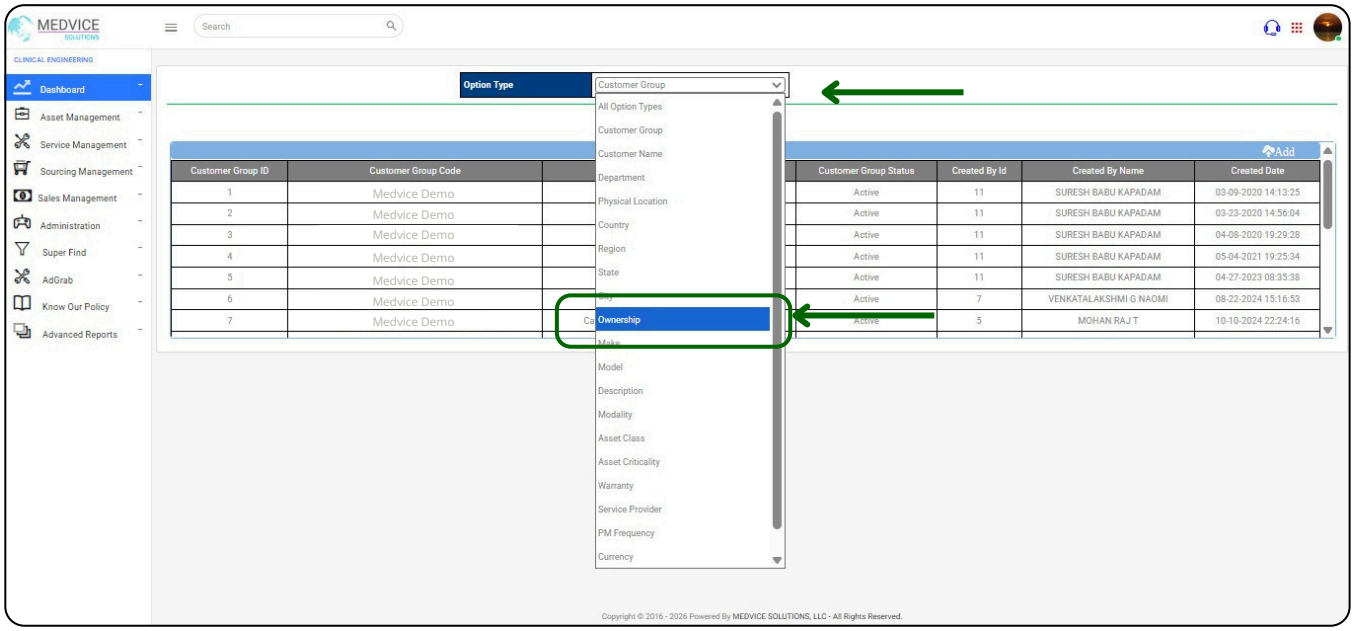
A pop-up window will be displayed. Specify the required Customer Group details



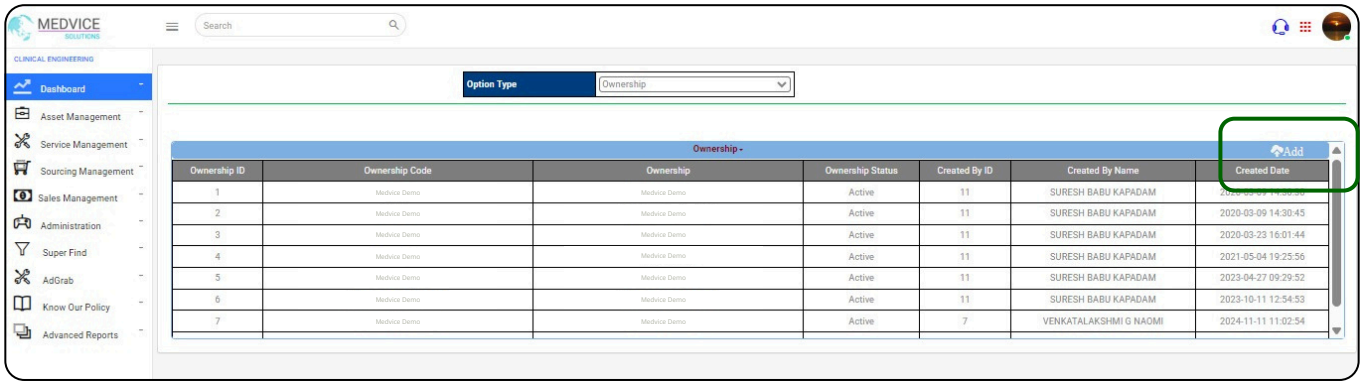
Select Submit to save the Customer Group details to the system.

Ownership Creation

After creating the Customer Group, create the Ownership under the relevant Customer Group. Select Ownership Creation.

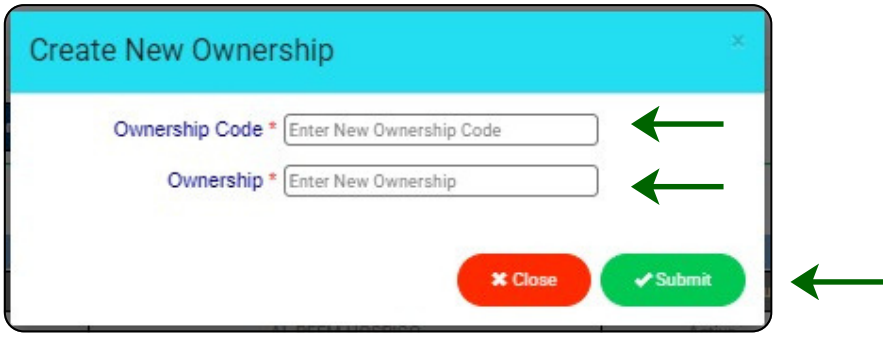


After selecting Ownership the system will display the list of existing Ownership. Select Add in the top-right corner to create a new Ownership.



MEDVICE SOLUTIONS

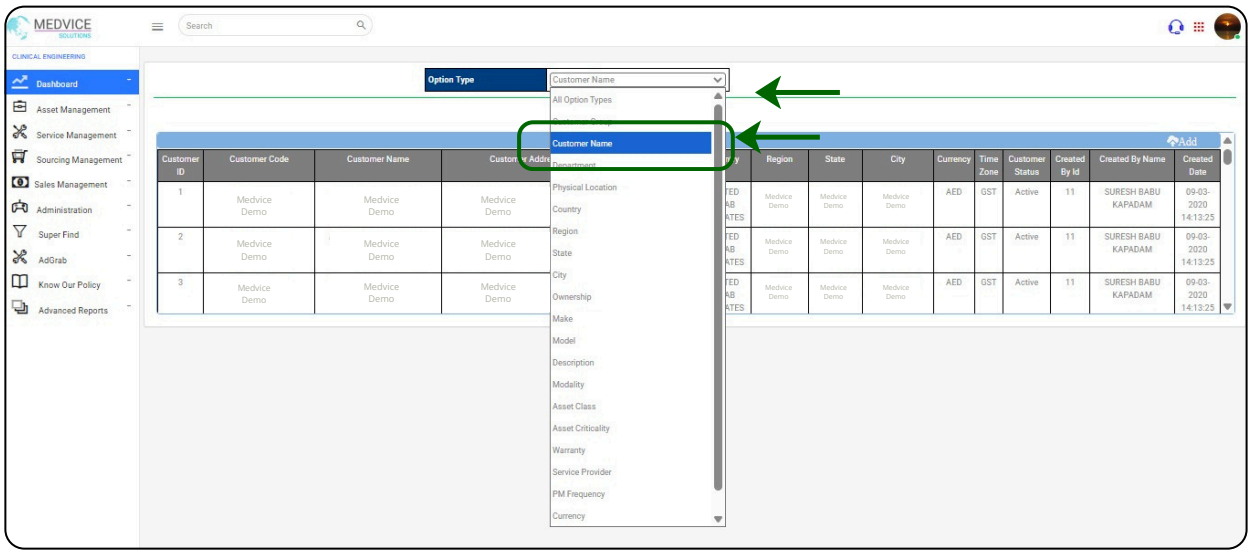
The Create New Ownership pop-up window will be displayed. Specify the required details.



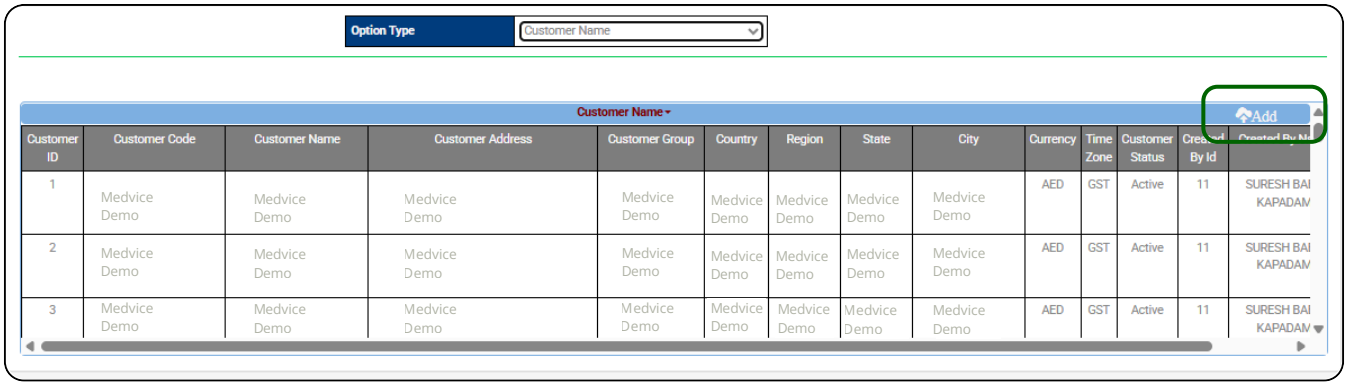
Select Submit to save the Ownership details to the system.

Customer Name Creation

After creating the Ownership, create the Customer Name under the relevant Ownership.

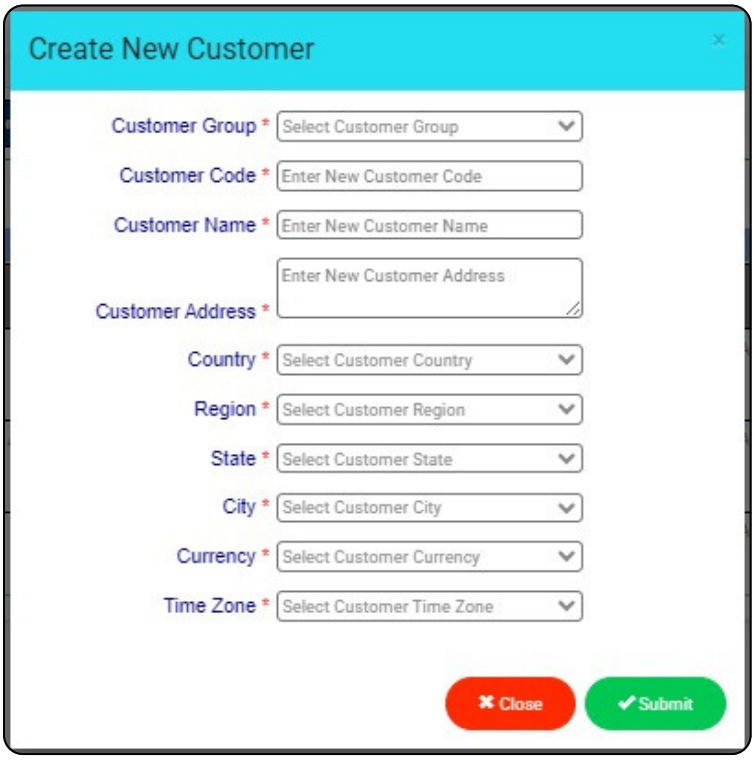


After selecting Customer Name the system will display the list of existing Customer Names. Select Add in the top-right corner to create a new Customer Name.



MEDVICE SOLUTIONS

The Create New Customer pop-up window will be displayed. Specify the required details.



Enter All Required Feilds

Submit

Once the Customer Name is created, the Customer will be successfully added to the system.

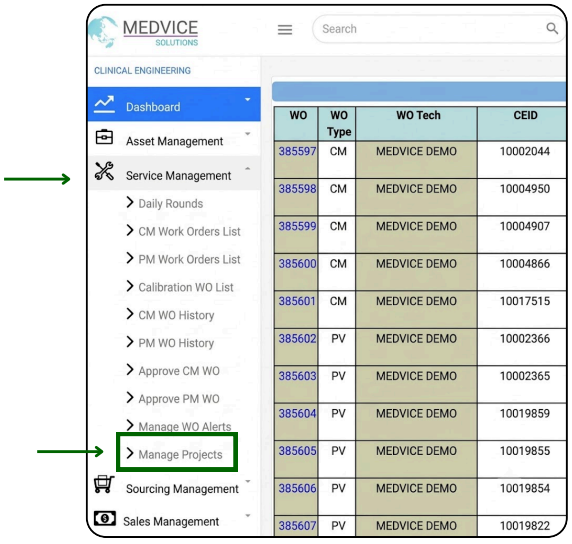
Note: If Country, Region, State, City, Currency, or Time Zone is unavailable while creating a Customer, create the required field first under Asset Options before proceeding.

Adding New Project

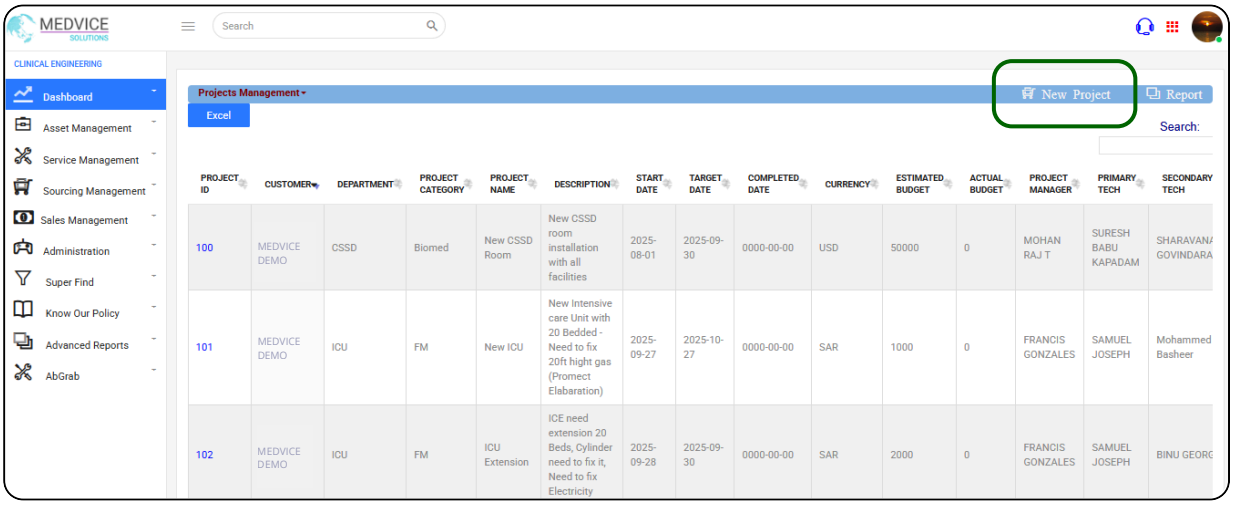
Adding New Project

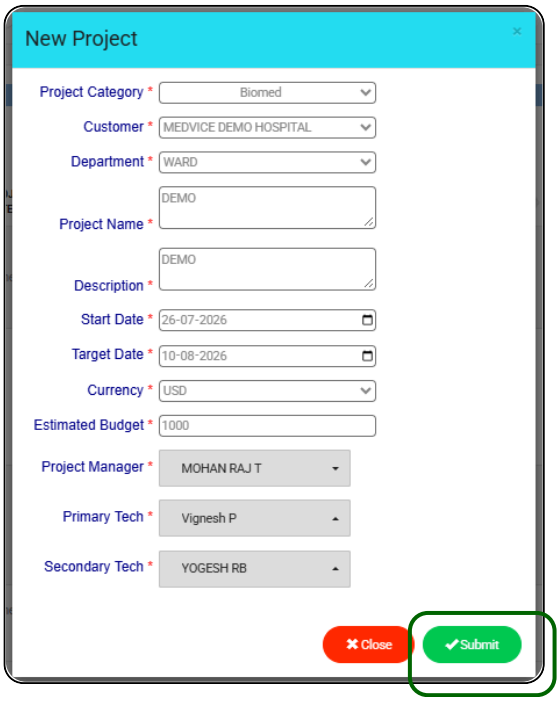
Project creation enables the organization and tracking of work activities, resources, timelines, budgets, and assigned personnel for a specific customer or department.

From the Dashboard, navigate to Service Management and select Manage Projects.



On the Project Management page, all existing projects will be displayed. Select New Project in the top-right corner to create a new project.





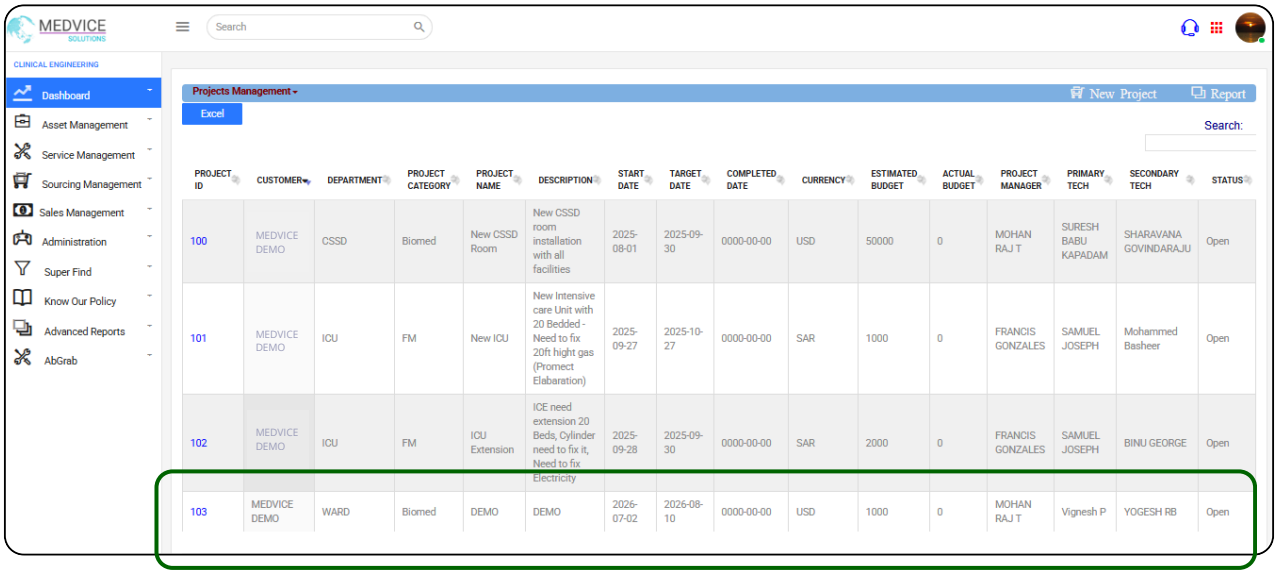
After selecting New Project, the New Project pop-up window will be displayed. Specify the required details as follows:

- **Project Category:** Select the appropriate category based on the nature of the project.
- **Customer:** Select the customer or hospital for which the project is being created.
- **Department:** Select the department associated with the project.
- **Project Name:** Specify a unique and descriptive name for the project.
- **Project Description:** Provide a brief summary of the project scope and objectives.
- **Start Date:** Specify the planned project start date.
- **Target Date:** Specify the expected project completion date.
- **Currency:** Select the applicable currency for the project budget.

- **Estimated Budget:** Specify the estimated cost allocated to the project.
- **Project Manager:** Select the person responsible for managing and coordinating the project.
- **Primary Technician:** Assign the primary technician responsible for the project activities.
- **Secondary Technician:** Assign the secondary technician to support project activities, as required.

After entering all mandatory details, select Submit to create the project.

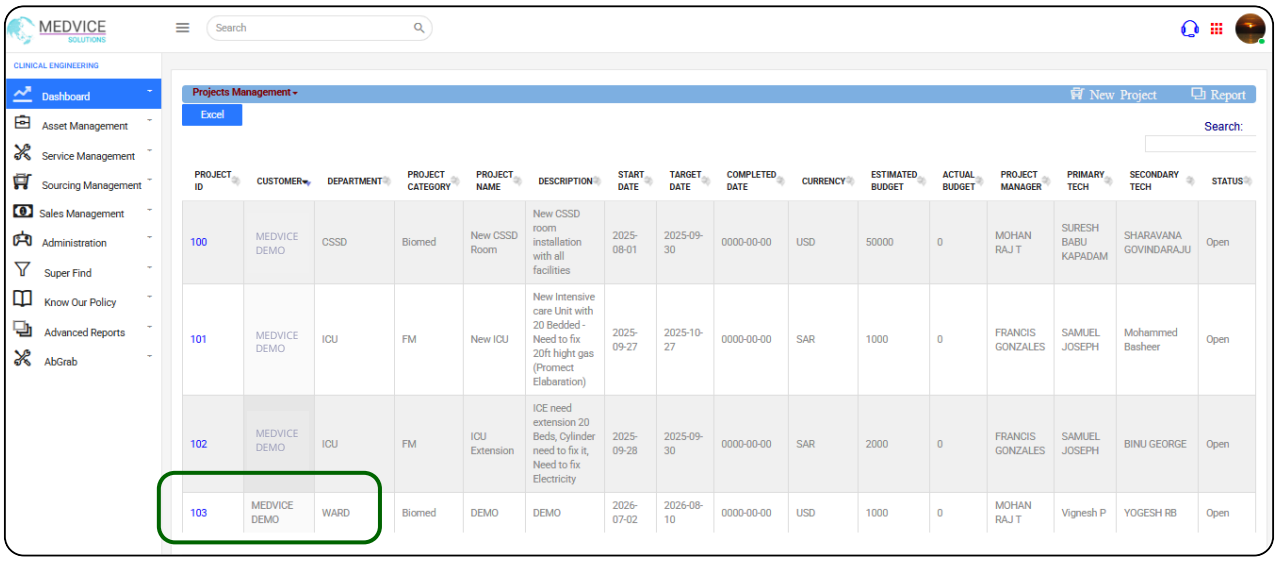
Once created, the project will be added to the Project Management list, as shown in the image below.



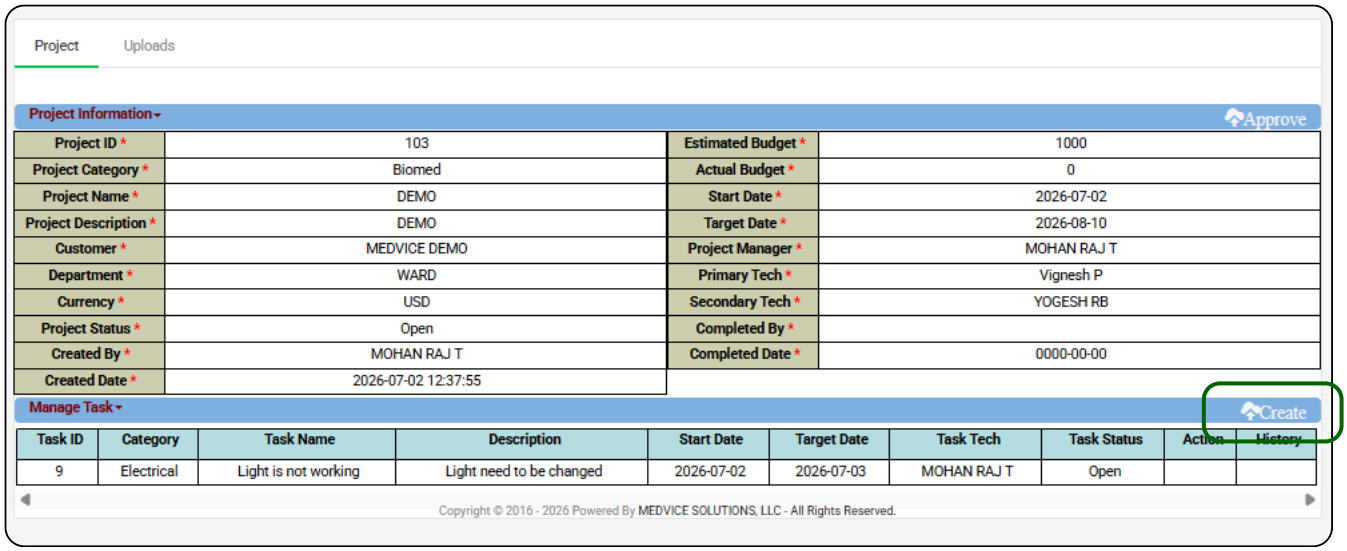
Adding a New task

Task creation allows project activities to be defined, assigned, and tracked, ensuring that the required work is organized and completed within the planned timelines.

Select the respective Project ID to access the project details and assign a new task, as shown in the image above.

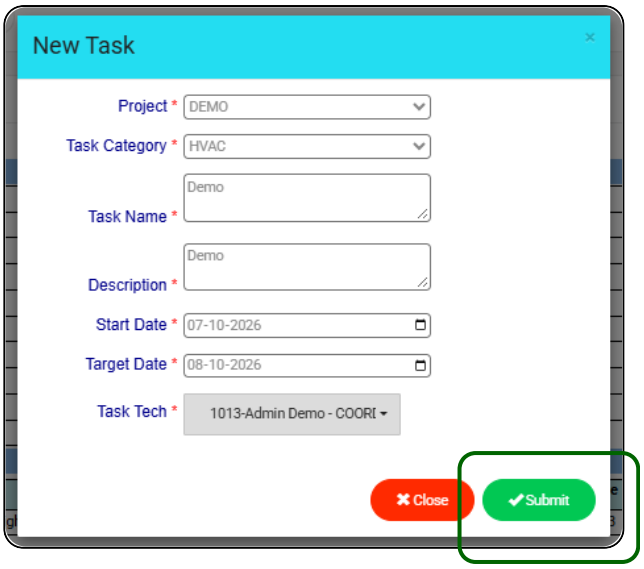


After selecting the Project ID, the Project Description page will be displayed. Select Create in the bottom-right corner to open the New Task pop-up window.



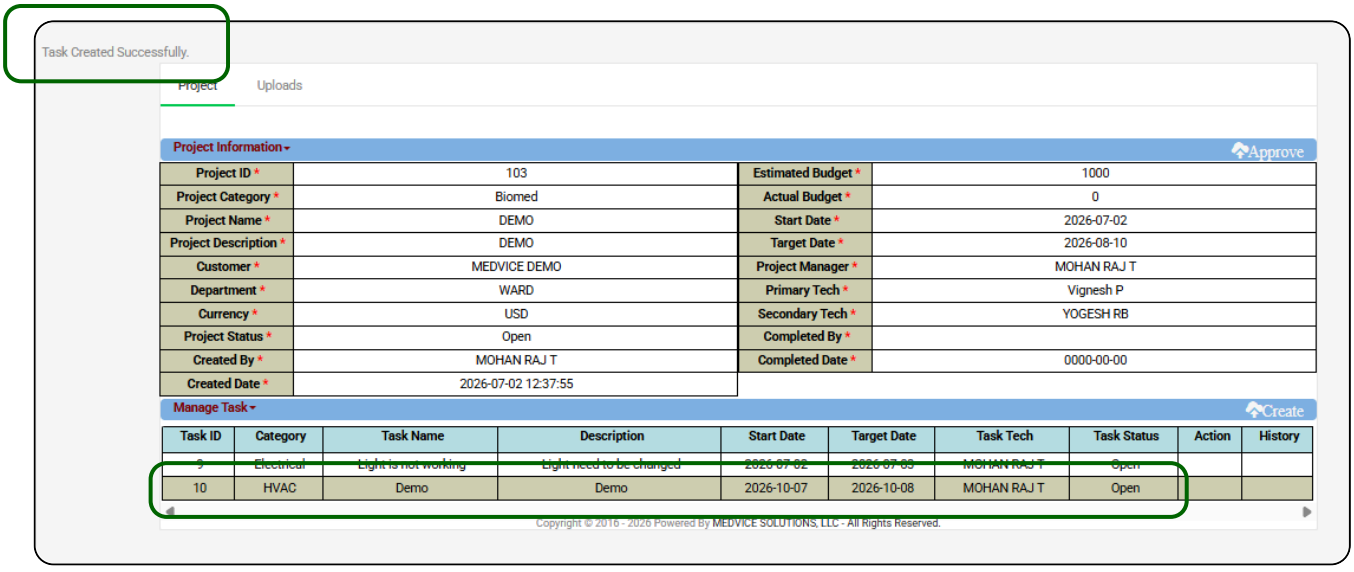
MEDVICE SOLUTIONS

The New Task pop-up window will be displayed. Specify all required Task Details and select Submit to create the task.



Enter All Required Feilds

Once created, the task will be listed under Manage Task for further management and tracking.



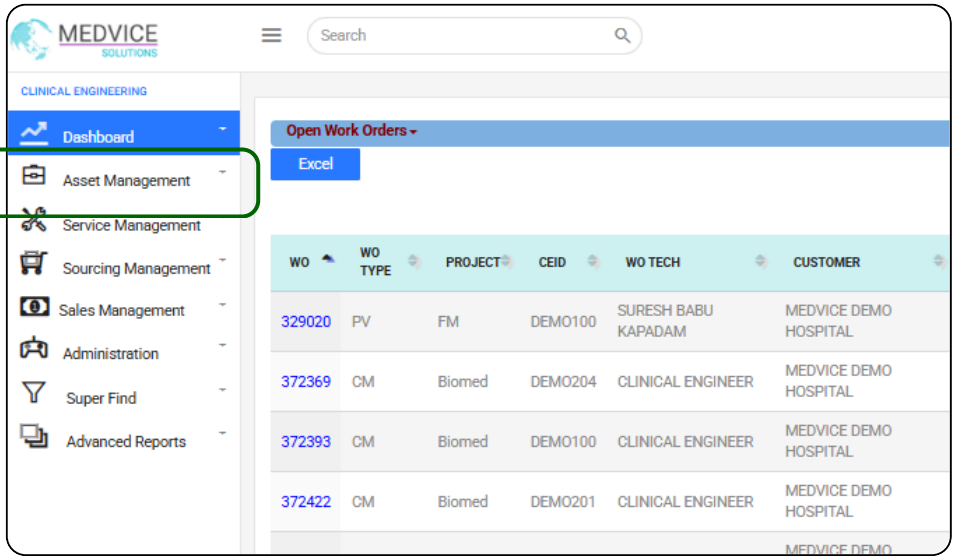
The project has been successfully created, and the task has been assigned.

Adding New Asset

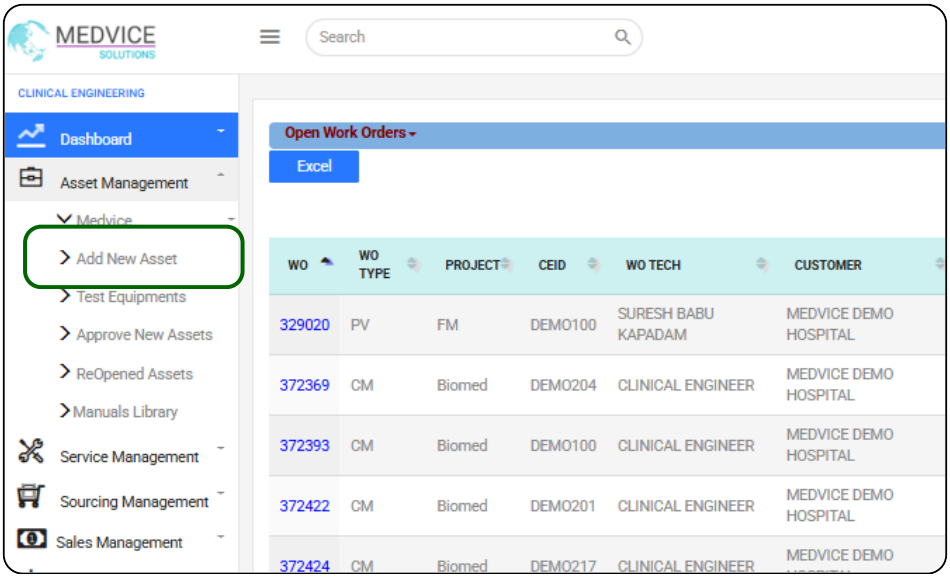
Asset registration assigns a unique CEID (Customer Equipment ID) to each asset, enabling accurate identification, tracking, and maintenance management within Medvice Insight.

After logging in, the Medvice Insight Dashboard will be displayed, as shown in the image below.

Navigate to the Asset Management tab.

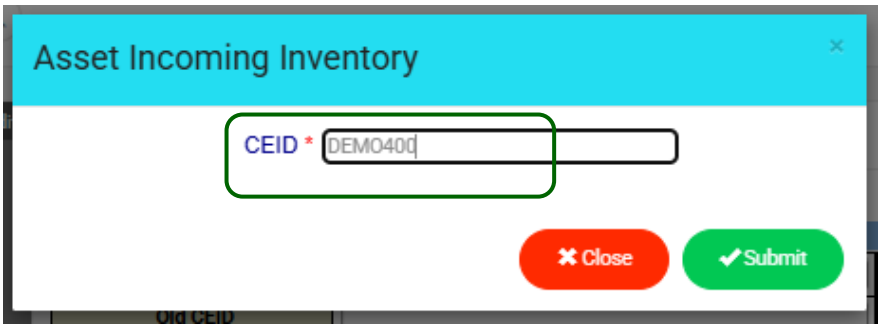


Under the Asset Management , select the Add New Asset tab.



If CEID is pre-listed in the Asset List

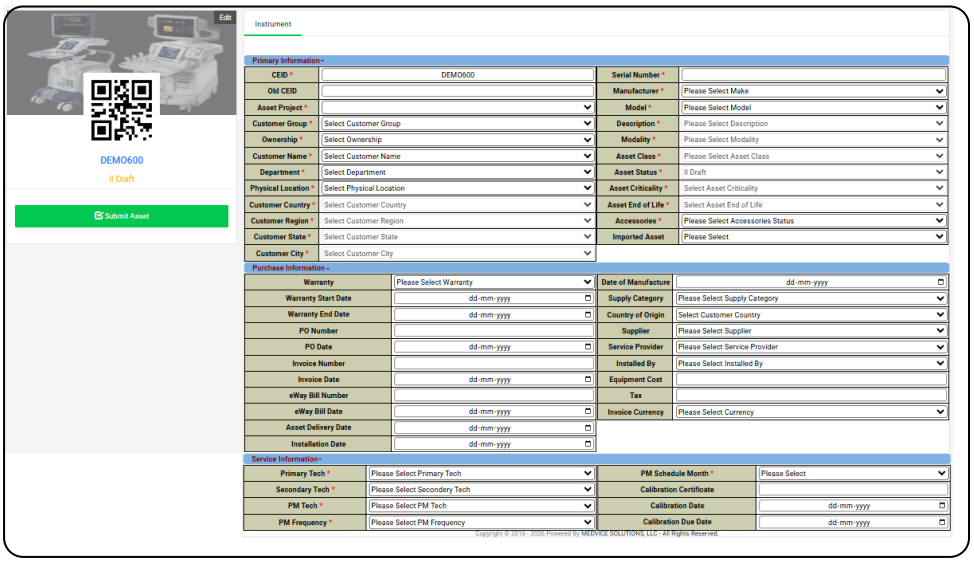
After clicking Add New Asset, an Asset Incoming Inventory window will appear.



After specifying the CEID, select Submit to proceed. If the message "CEID already available in the Asset List" is displayed, the specified CEID is already registered in the Asset List.

Adding New Asset

If the specified CEID is not registered in the system, the Asset page will be displayed, as shown in the image below. Specify the required Asset Details to register the asset.



Once the page is displayed, select Edit Asset and update the required mandatory fields.

Primary Information

1. Asset Project

- Select the appropriate Asset Project: FM, Biomed, or IT.

2. Customer Group

- Select the relevant Customer Group.

3. Ownership

- Select the relevant Ownership.

4. Customer Name

- Select the relevant Customer Name.
- The corresponding Country, Region, State, and City details will be populated automatically.

5. Department

- Select the relevant Department associated with the selected Customer (Hospital).

6. Physical Location

- Select the relevant Physical Location associated with the selected Department.

7. Serial Number

- Specify the asset's Serial Number.

8. Manufacturer & Model

- Select the appropriate Manufacturer & Model associated with the asset.
- The related asset details will be populated automatically.

9. Accessories

- Specify whether Accessories are Applicable or Not Applicable for the asset.

Service Information

1. Primary Technician

- Select the designated Primary Technician assigned to the asset.

2. Secondary Technician

- Select the designated Secondary Technician assigned to the asset.

3. PM Technician

- Select the designated PM Technician assigned to the asset.

4. PM Frequency

- The PM frequency for each equipment shall be determined based on the OEM (Original Equipment Manufacturer) recommendations and standards. Depending on the equipment type, the PM frequency may be set to 3, 6, or 12 months. For equipment that does not require preventive maintenance, select “NA” (Not Applicable).

5. PM Schedule Month

- Select the appropriate PM Schedule Month for the asset.

Adding a New Manufacturer, Model and Description

When registering a new asset, ensure that the Manufacturer, Model and Description details are available in the system. If either entry is unavailable, create it before proceeding with asset registration.

Creating Make, Description and Model

MEDVICE SOLUTIONS

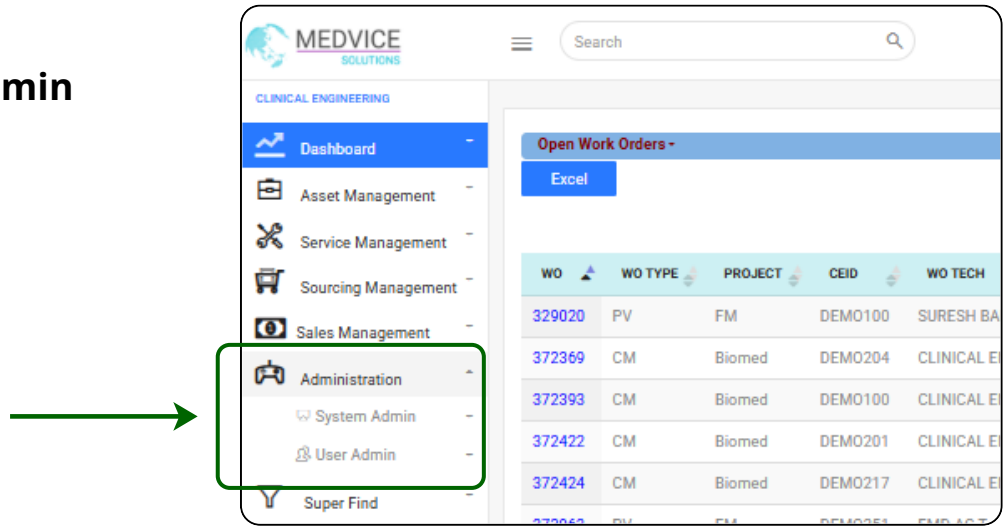
Creating Make, Description and Model

After logging in, the Medvice Insight Dashboard will be displayed, as shown in the image below.

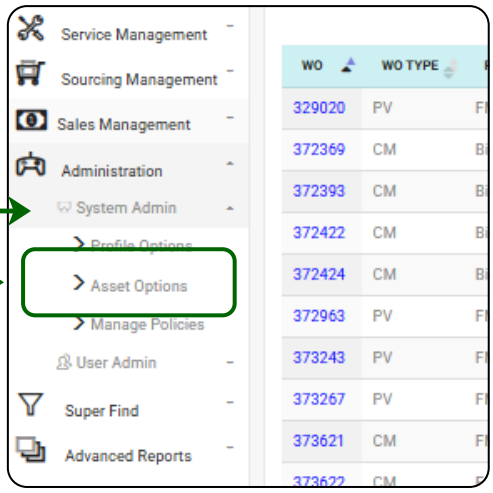
Note: The Administration tab is accessible only to users with Manager or Reference Manager access.

Navigate to the Administration tab. The Administration section provides the following two options:

1.System Admin

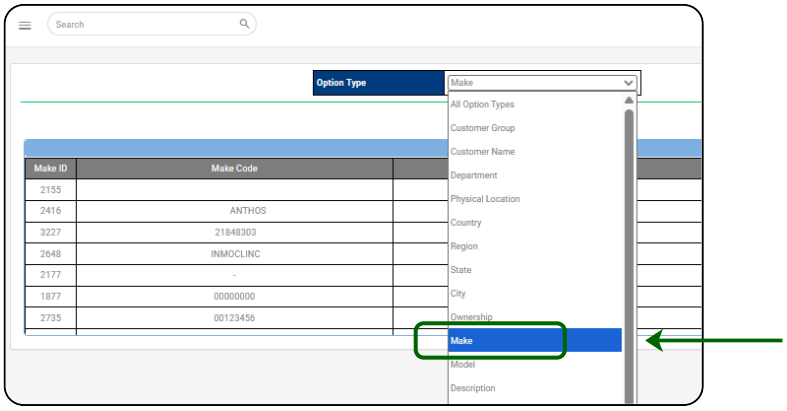


Under the System Admin section, two options are available. Select Asset Options to access the asset configuration settings.

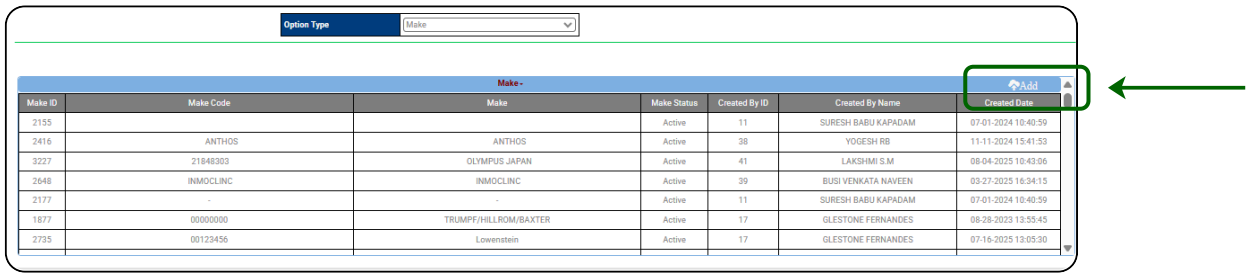


Make

- Navigate to the Asset Options page and select Make from the Option Type drop-down at the top of the page.



- The system will display the list of existing Make. Select + Add in the top-right corner to create a new Make.



In the Create New Make pop-up window, specify the following details:

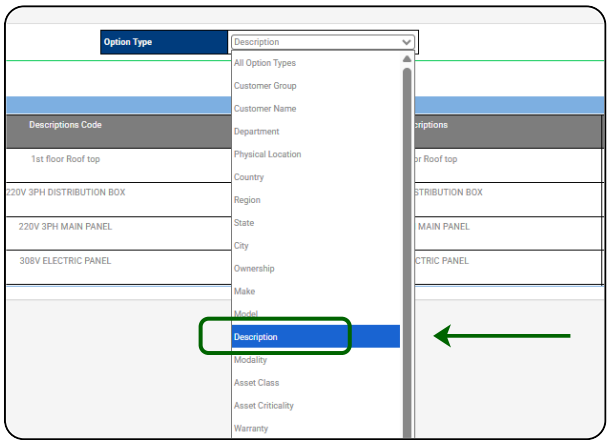
- Make Code: Specify the official Make Code.
- Make: Specify the Make name.

Select Submit to save the Make details to the system.

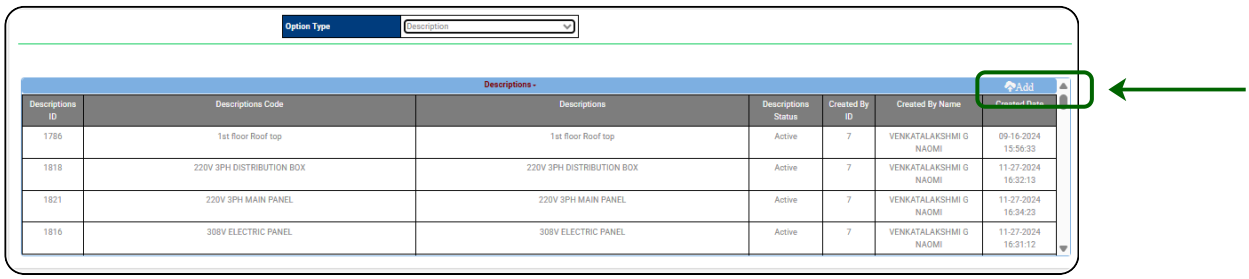
MEDVICE SOLUTIONS

Description

- Navigate to the Asset Options page and select Description from the Option Type drop-down at the top of the page.



- The system will display the list of existing Description. Select + Add in the top-right corner to create a new Description.



In the Create New Description pop-up , specify the following details:

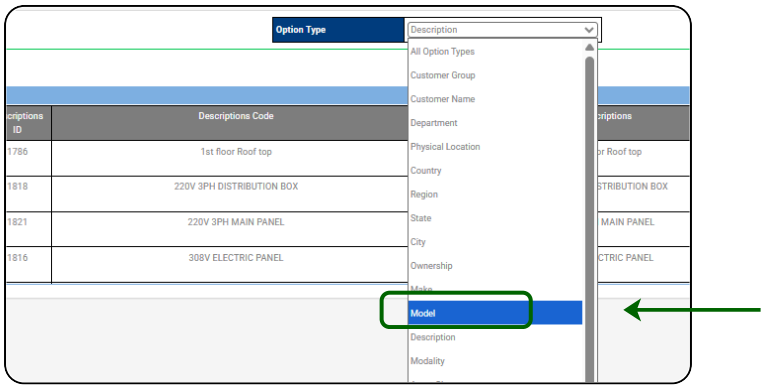
- Description Code: Specify the official Description Code.
- Description: Specify the Description.

Note:-
Please provide or update the equipment descriptions in accordance with the standardized nomenclature and ensure alignment with applicable ECRI standards.

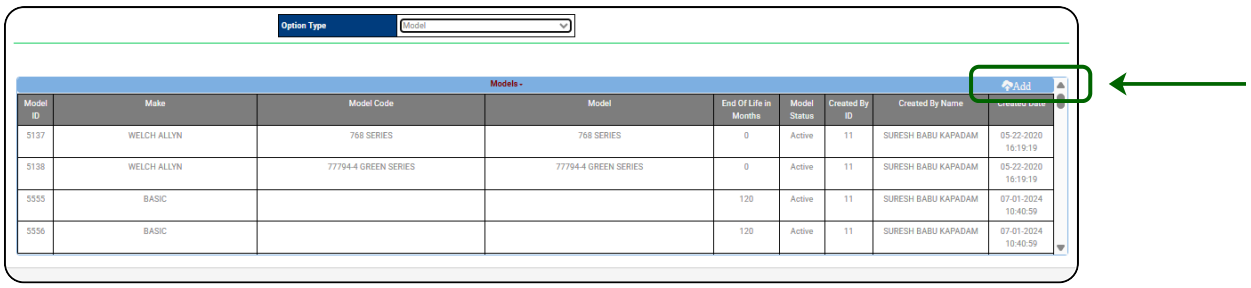
Select Submit to save the description details to the system.

Model

- Navigate to the Asset Options page and select Model from the Option Type drop-down at the top of the page.



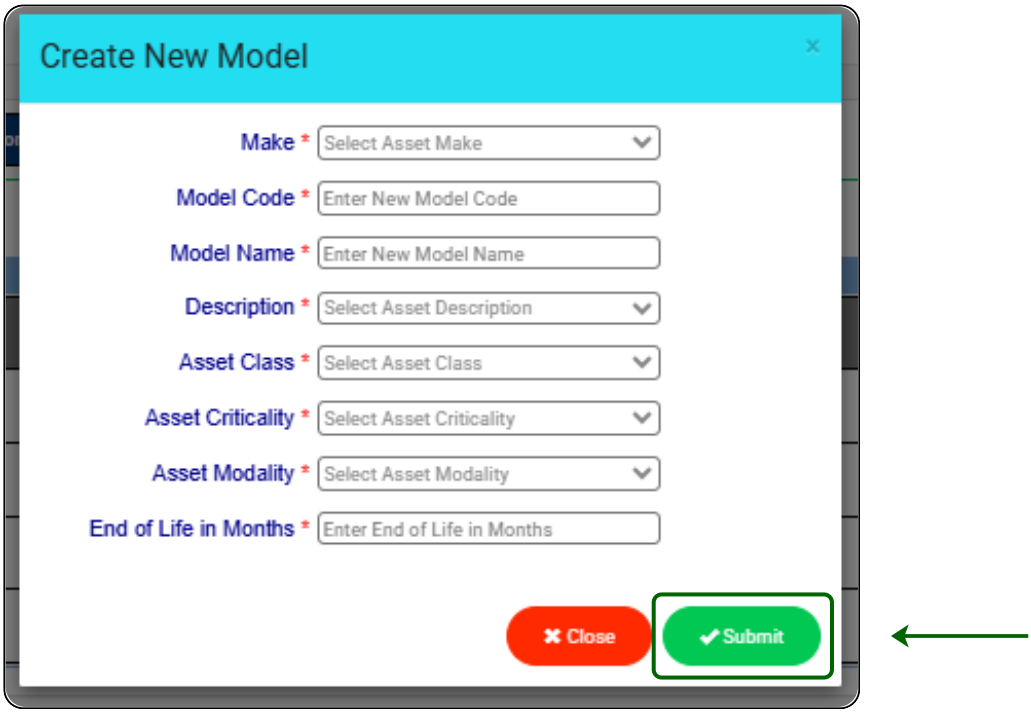
- The system will display the list of existing Model. Select + Add in the top-right corner to create a new Model.



The Create New Model form contains the following fields:

- Make: Select the asset manufacturer.
- Model Code: Enter the unique model code.
- Model Name: Enter the model name.
- Description: Select the asset description.
- Asset Class: Select the applicable asset category.
- Asset Criticality: Specify the asset's criticality level.
- Asset Modality: Select the relevant asset modality.
- End of Life in Months: Enter the expected asset lifespan in months.

MEDVICE SOLUTIONS



Select Submit to save the model details to the system.

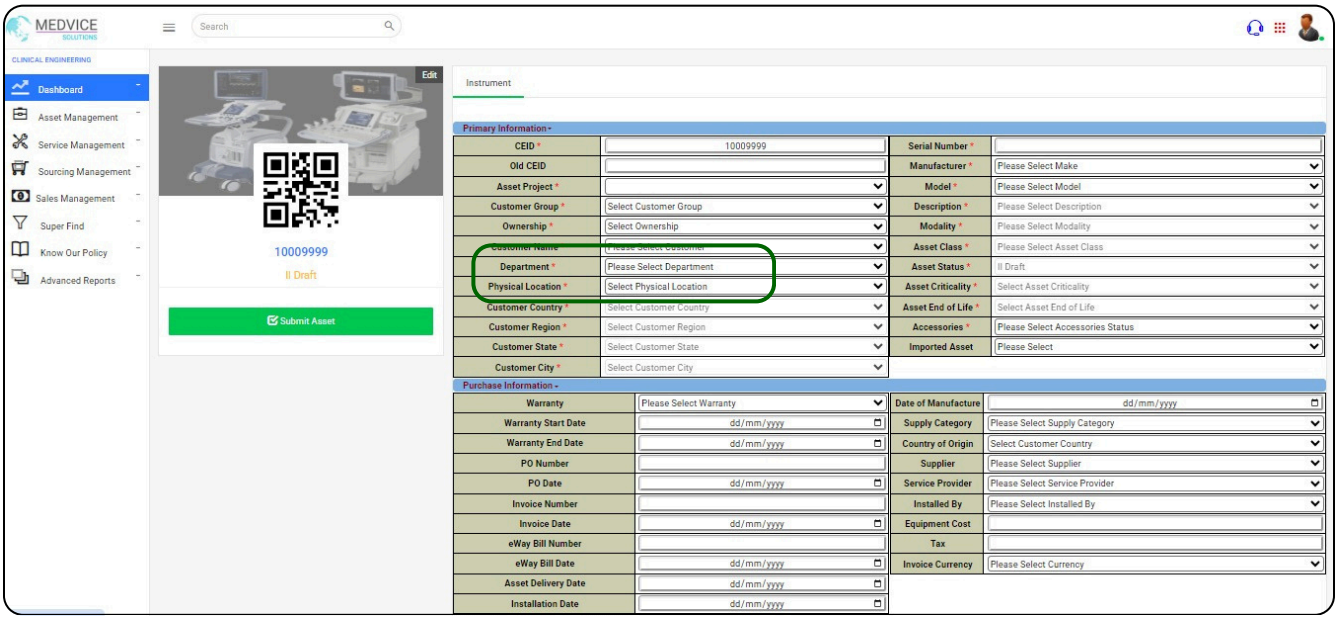
Creating Department & Physical Location

Department & Physical Location

Department and Physical Location must be configured to identify the department responsible for the asset and its specific installation location.

- **Department:** Select the relevant Department associated with the asset. If unavailable, create it in the system before proceeding.

- **Physical Location:** Select the specific location where the asset is installed or used. If unavailable, create it in the system before proceeding.

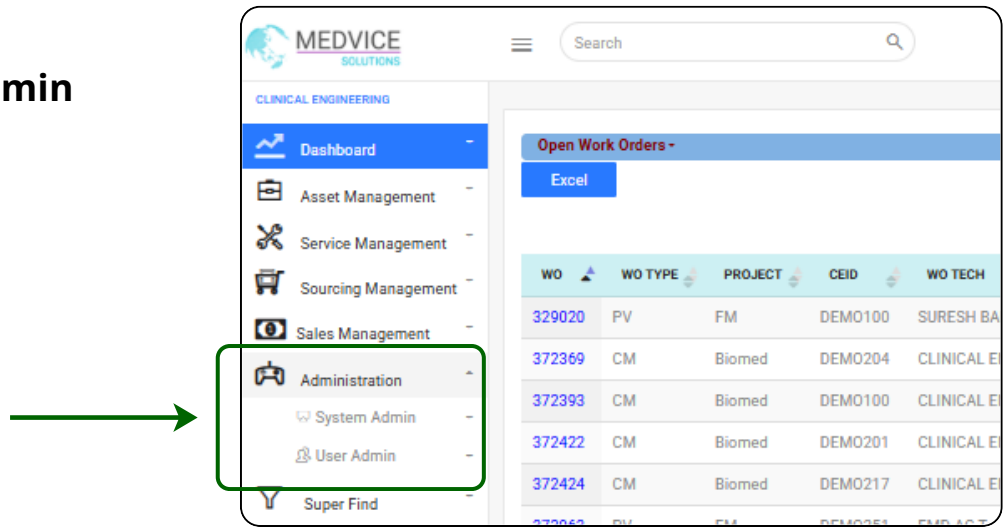


After logging in, the Medvice Insight Dashboard will be displayed, as shown in the image below.

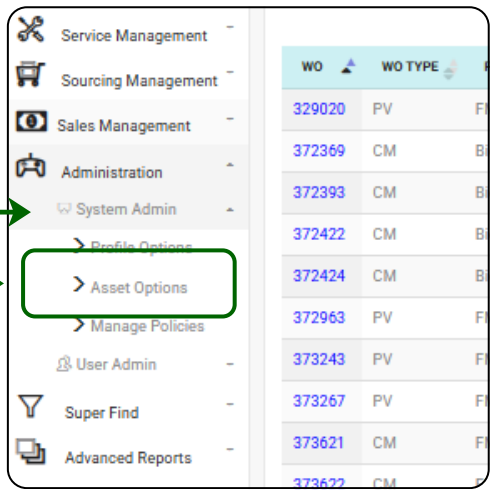
Note: The Administration tab is accessible only to users with Manager or Reference Manager access.

Navigate to the Administration tab. The Administration section provides the following two options:

1.System Admin

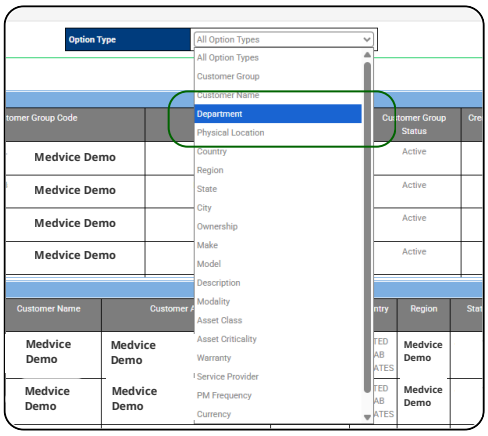


Under the System Admin section, two options are available. Select Asset Options to access the asset configuration settings.

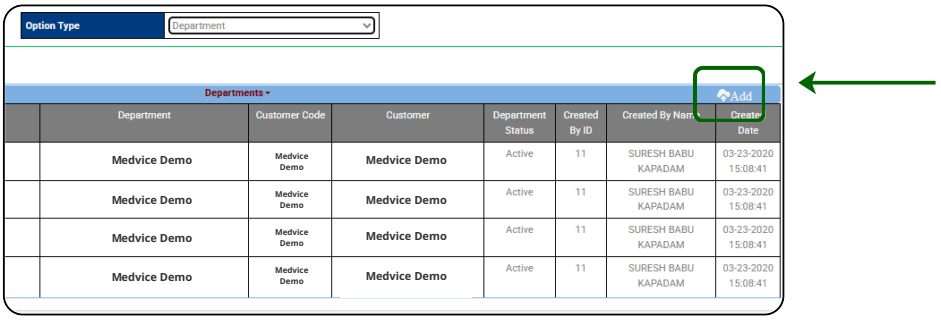


Department

- Navigate to the Asset Options page and select Department from the Option Type drop-down at the top of the page.

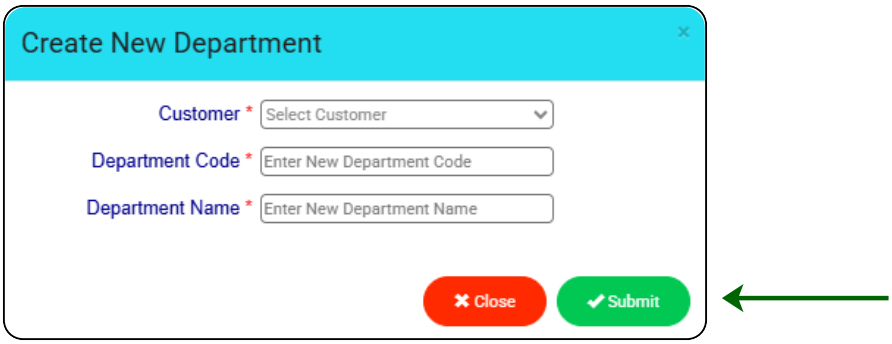


- The system will display the list of existing Departments. Select + Add in the top-right corner to create a new department.



In the Add Department pop-up window, specify the following details:

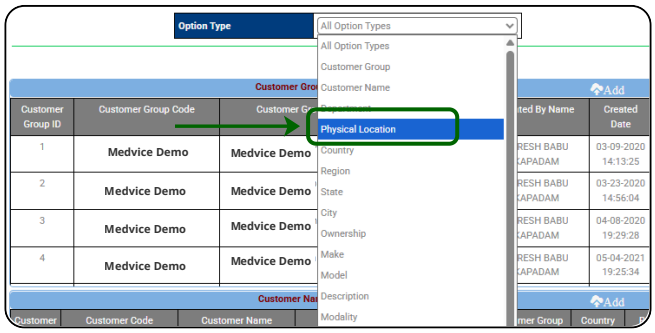
- Department Name: Specify the official department name.
- Department Code / ID: Specify the unique department identifier.
- Description / Notes: Specify any additional operational details.



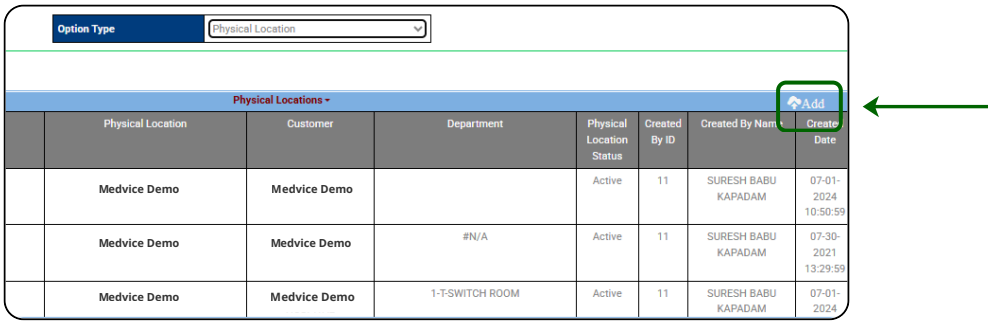
Click Submit to create the new department.

Physical Location

- Navigate to the Asset Options page and select Physical Location from the Option Type drop-down at the top of the page.

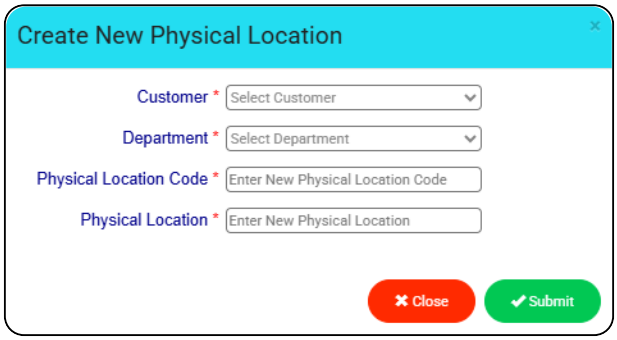


The system displays the list of configured physical locations. Click the + Add button in the top-right corner.



In the Add Physical Location pop-up window, specify the following details:

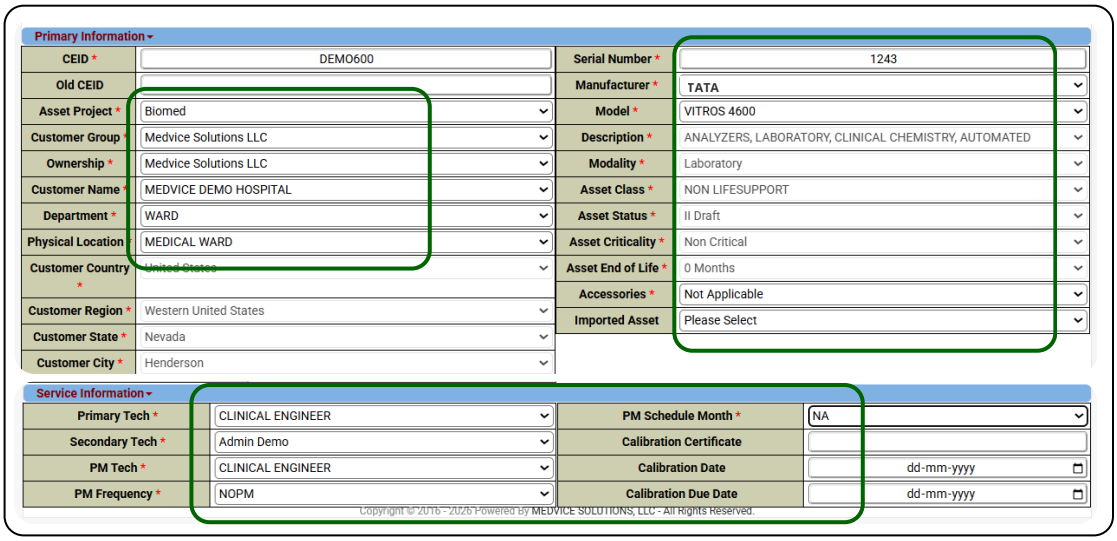
- Customer: Select the relevant customer.
- Department: Select the relevant department.
- Physical Location Code: Specify the unique location code.
- Physical Location: Specify the physical location name or details.



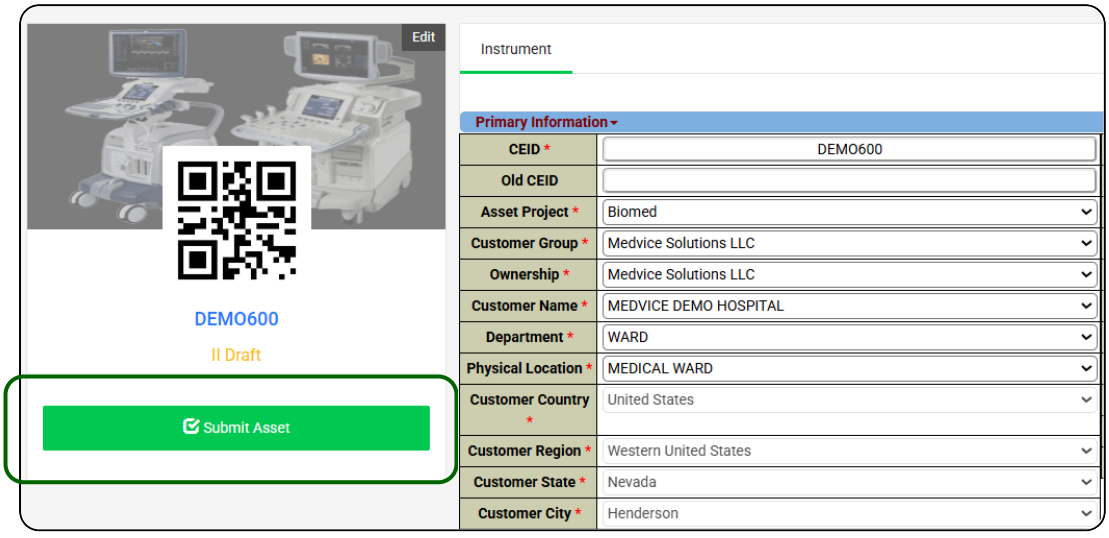
Click Submit to create the new Physical Location.

MEDVICE SOLUTIONS

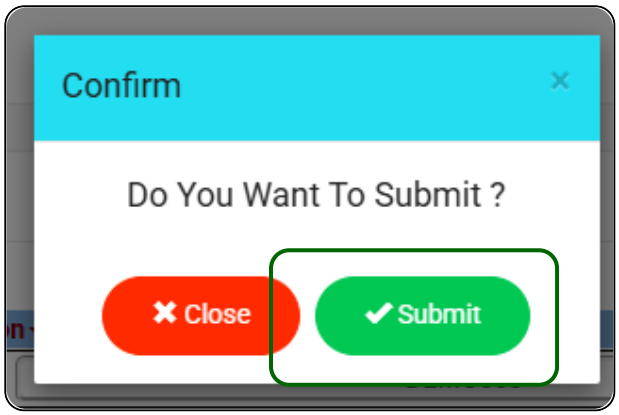
After completing the preceding steps, specify all required asset details in the respective sections and verify that all mandatory fields are completed.



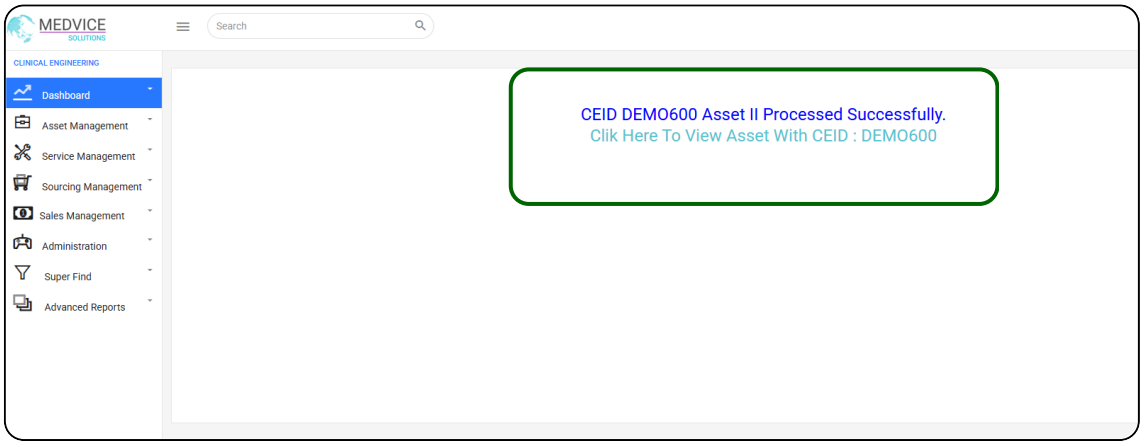
After verifying all required asset details, select Submit to save the asset information to the system.



After selecting Submit, a confirmation pop-up will appear. Select Submit again to confirm and save the asset details to the system.



Once submitted, the asset will be added to the Asset List, and a confirmation page indicating successful asset creation will be displayed.

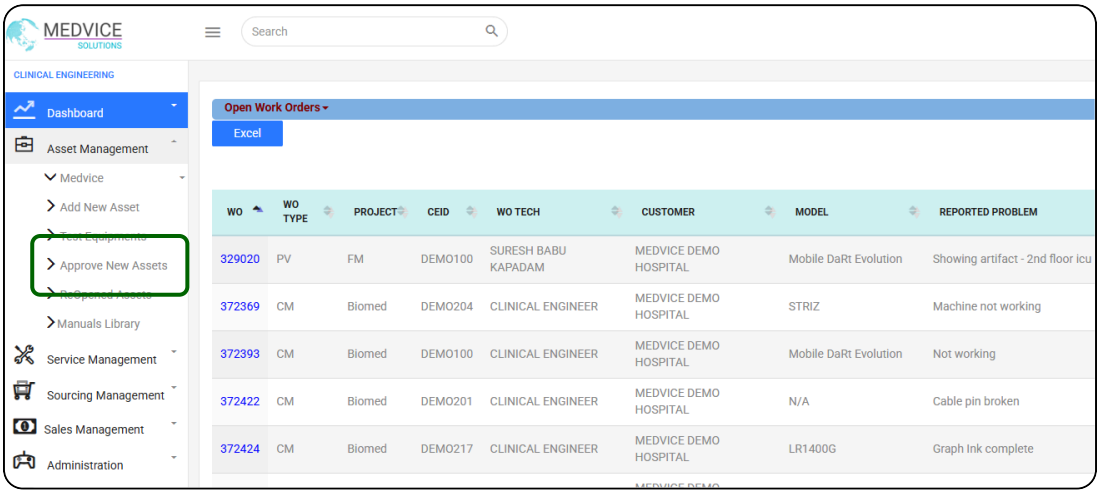


The asset has been successfully added to the system.

Approving Assets Lists

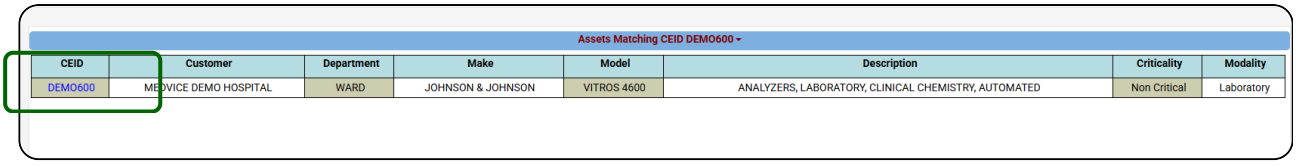
After filling in all the required information, click Submit Asset, located on the left side of the page.

Once the asset is submitted, it must be verified and approved by the Manager before the asset becomes active.



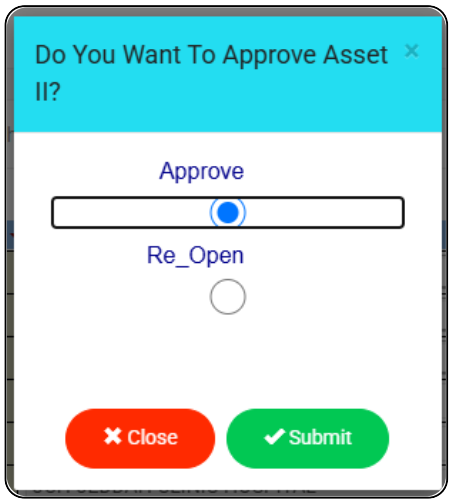
After the asset is created, the Manager will verify the asset details. Once the Manager has reviewed and confirmed the information, go to the Assets Management section and select the Approve New Assets tab.

You will see a list of newly created assets. Click on the corresponding CEID Number, as shown in the image above. The corresponding asset page will be displayed.

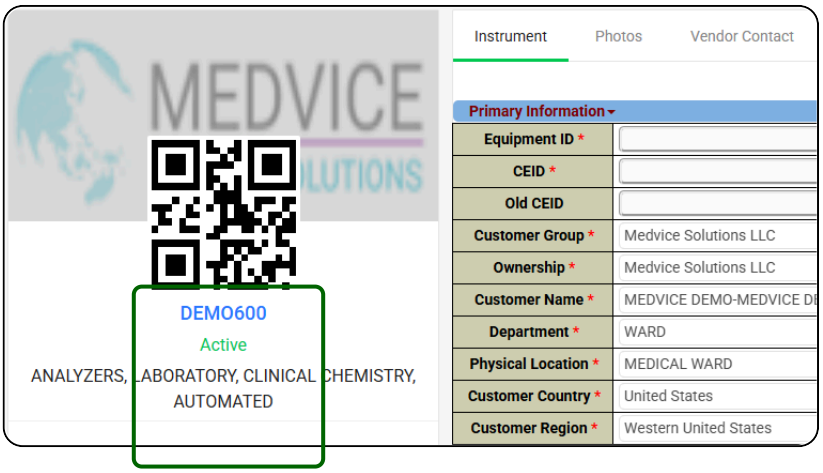


To approve the asset, click the Approve Asset button at the top. This will open the Approve Asset pop-up window.

The Manager should review the asset and, if everything is correct, select Approve and click Submit.



Once the approval process is completed, the asset status will change to Active, as shown in the images below.



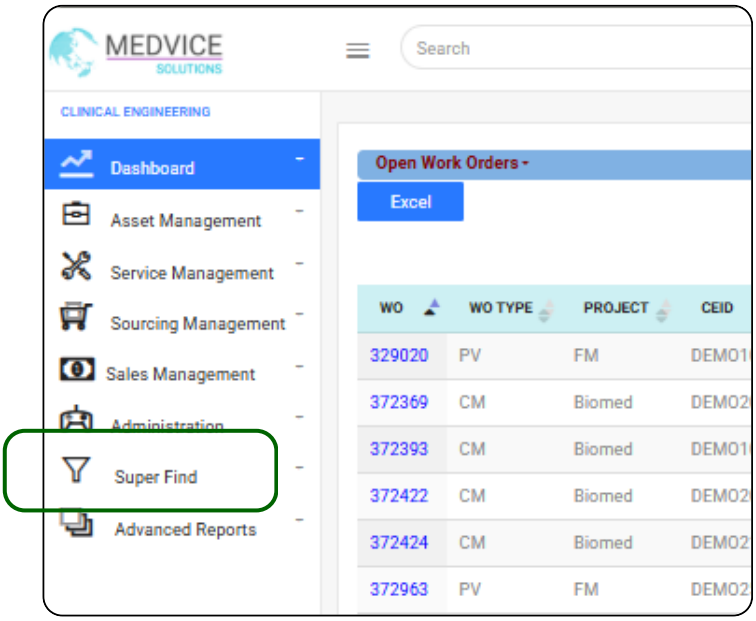
The new asset has been successfully added to the system

Super Find

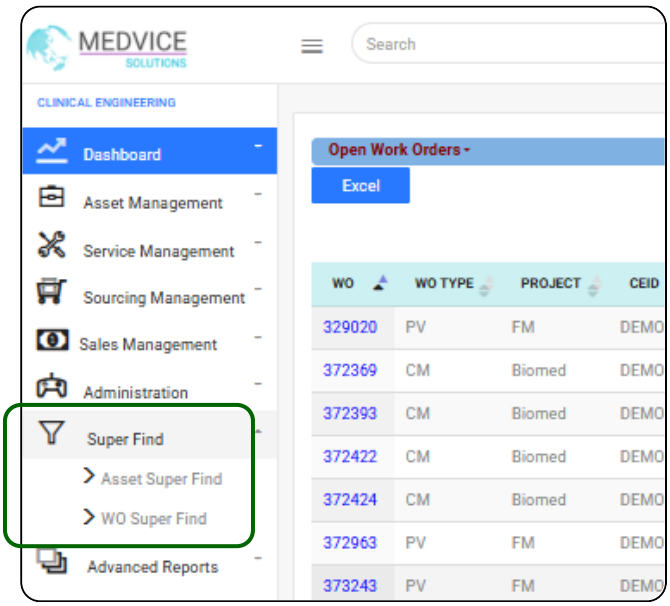
Dashboard & Super Find

After logging in, the MEDVICE Insight Dashboard will be displayed, as shown in the image below.

Navigate to the “Super Find” tab.



Under the Super Find section, two sub-tabs are available.

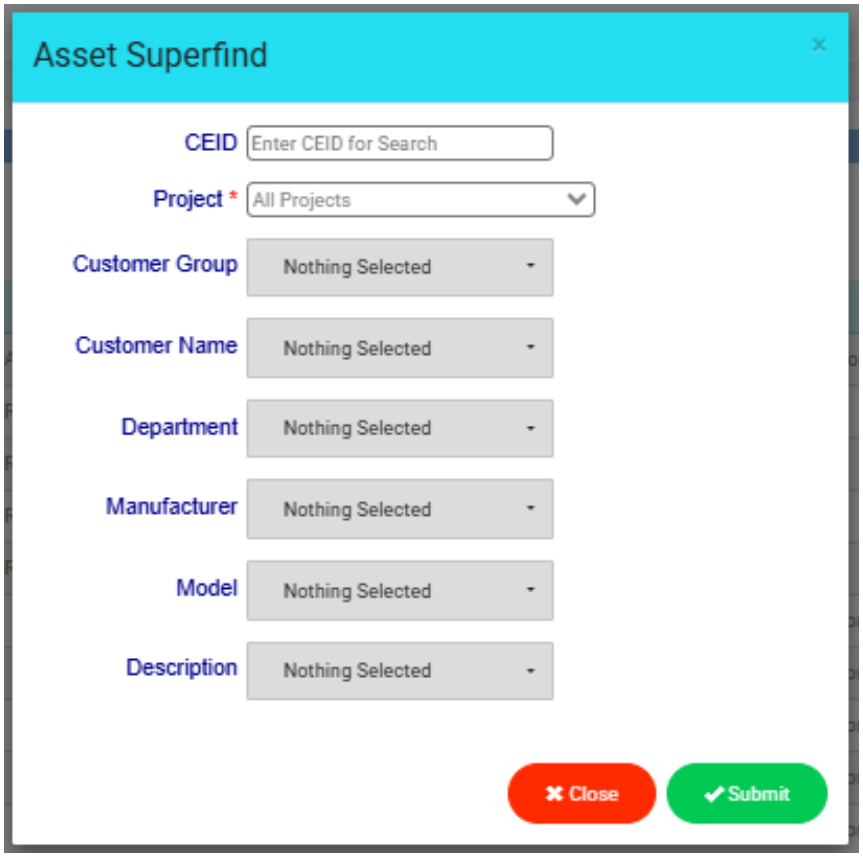


Asset Super Find

1.Asset Super Find
2.WO (Work Order) Super Find

1. Asset Super Find

Under the Super Find section, select Asset Super Find. A pop-up window will appear. Specify the required information in the respective fields, as shown in the image below.



MEDVICE SOLUTIONS

Assets Find Filters

In the Asset Super Find pop-up window, assets can be searched using the following filters:

1. CEID

- Specify the asset's CEID in the designated field to retrieve the corresponding asset details.

2. Project

- Select the relevant Project from the drop-down list to display associated assets.

3. Customer Group

- Select the relevant Customer Group to display associated assets across its customers or hospitals.

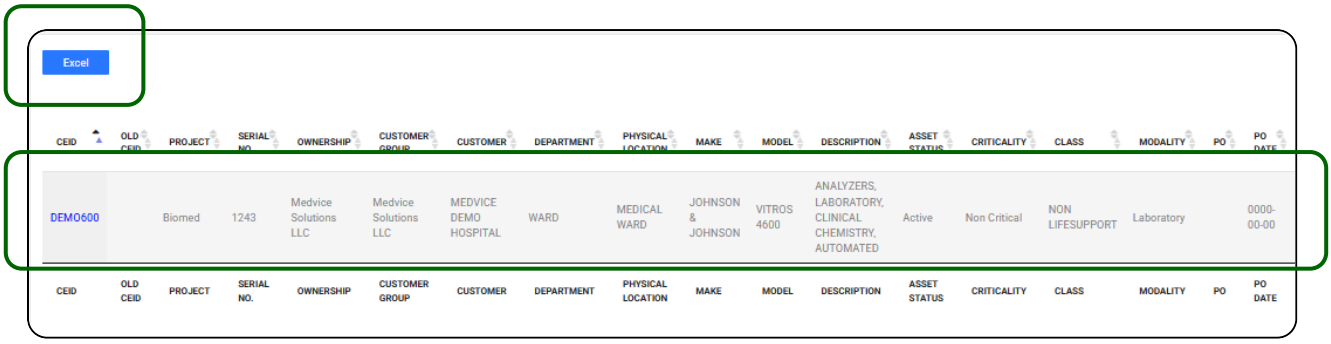
4. Customer Name

- Select the relevant Customer Name (Hospital) to retrieve the associated assets.

5. Department, Manufacturer, Model, or Description

- Select the applicable filter and specify the relevant details to retrieve matching asset records.

After specifying the required search criteria, select Submit to retrieve the matching Work Order details. The results will be displayed in the system, as shown in the image below.

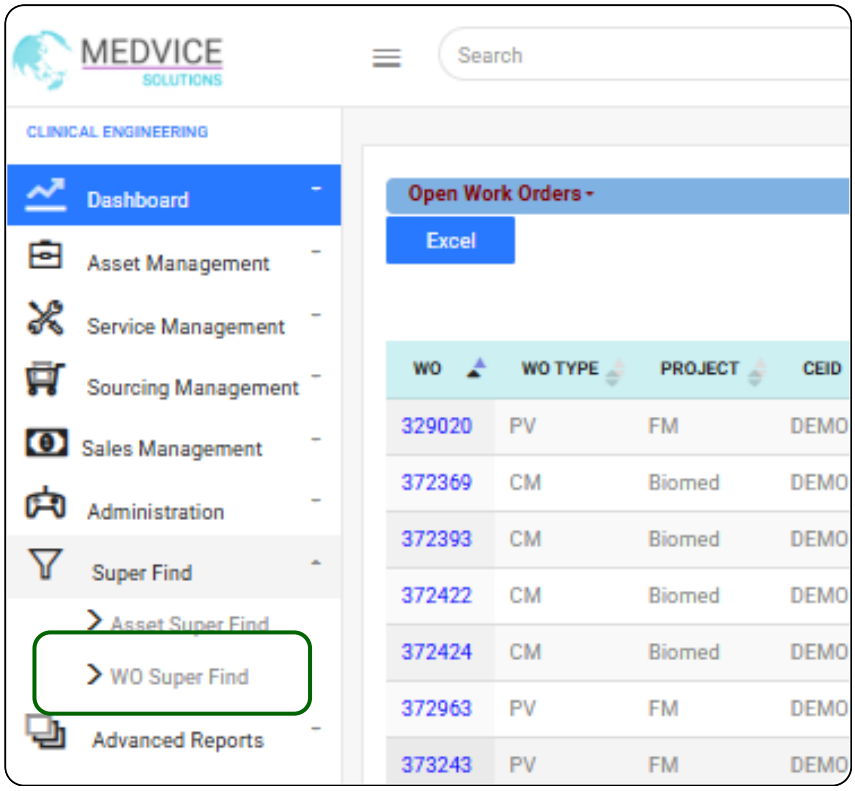


The Excel option allows users to export the retrieved data in Excel format for further analysis, reporting, and documentation.

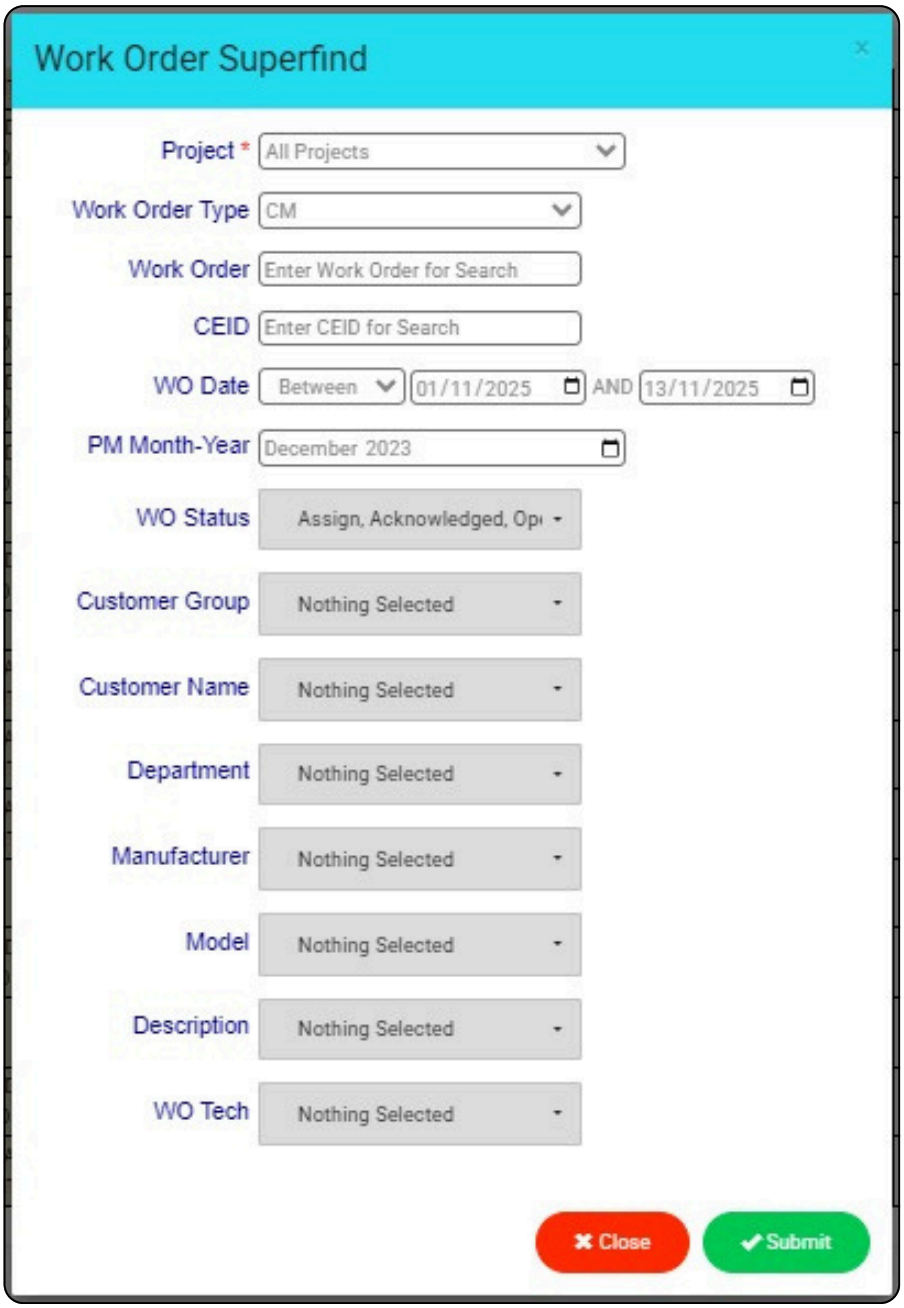
You can now search for and retrieve Assets using the “Asset Super Find” feature.

1. Work Order (WO) Super Find

Under the Super Find section, select the Work Order Super Find tab. After selecting Work Order Super Find, a Work Order Super Find pop-up window will appear, prompting you to enter the required information, as shown in the image below.



WO Super Find



In the Work Order Super Find pop-up window, Work Orders can be searched using the following filter:

1. Project

- Select the relevant Project from the drop-down list to retrieve the associated Work Orders.

MEDVICE SOLUTIONS

Work Orders Filters

2. Work Order Type

- Select the required Work Order Type from the drop-down list, such as CM, PM, PV, Calibration, AI, or Work Order, to retrieve the associated records.

3. Work Order

- Specify the Work Order Number in the designated field to retrieve the corresponding Work Order details.

4. CEID

- Specify the asset's CEID to retrieve the associated Work Order details.

5. Work Order Date

- Select the required Work Order Date to retrieve Work Orders associated with that date.

6. PM Month-Year

- Select the required month and year to retrieve PM Work Orders scheduled for the specified period.

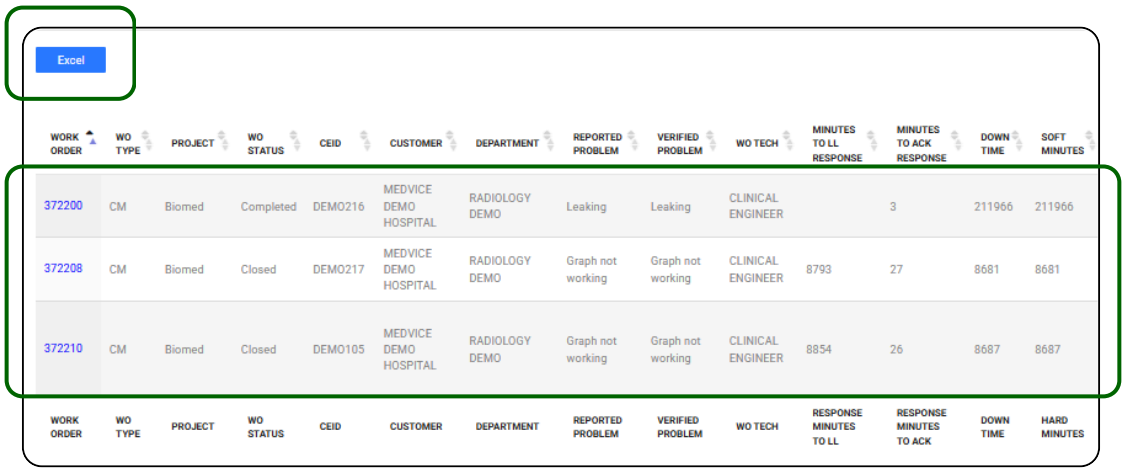
7. Work Order Status

- Select the required Work Order Status from the drop-down list. Available statuses include Assigned, Acknowledged, Open, Reopen, Completed, and Closed. The corresponding Work Orders will be displayed.

8. Customer Group, Customer Name, Department, Manufacturer, Model, Description, and WO Tech

- Select the relevant filter and specify the required criteria to retrieve matching Work Orders.

After specifying the required search criteria, select Submit to retrieve the matching records. The corresponding Work Order details will be displayed in the system, as shown in the image below.



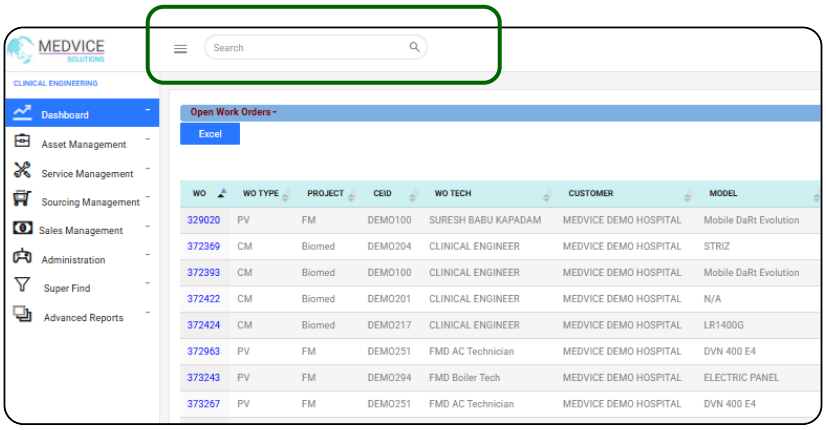
The Excel option allows users to export the retrieved data in Excel format for further analysis, reporting, and documentation.

You can now search for and retrieve Work Oders using the “WO Super Find” feature.

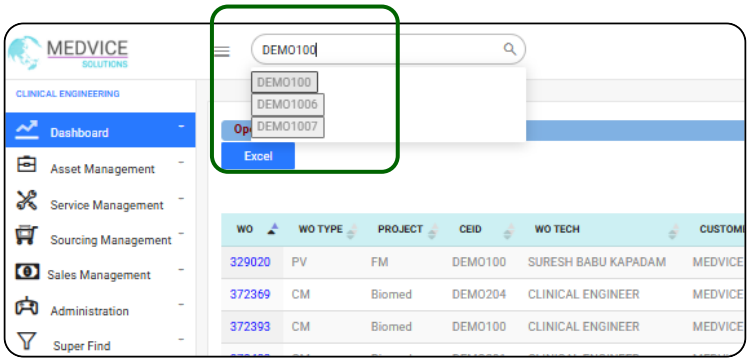
Universal Search

Universal Search

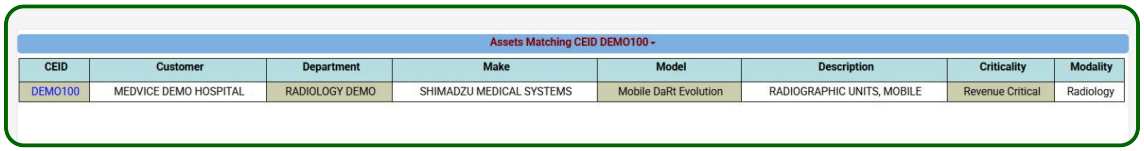
Navigate to the Universal Search option on the main Dashboard.



- Select the Universal Search bar and specify the required search criteria.
- Search using an exact Work Order Number, Asset ID, or relevant keywords to retrieve matching records.



- The system will display the corresponding records and related information based on the search criteria.

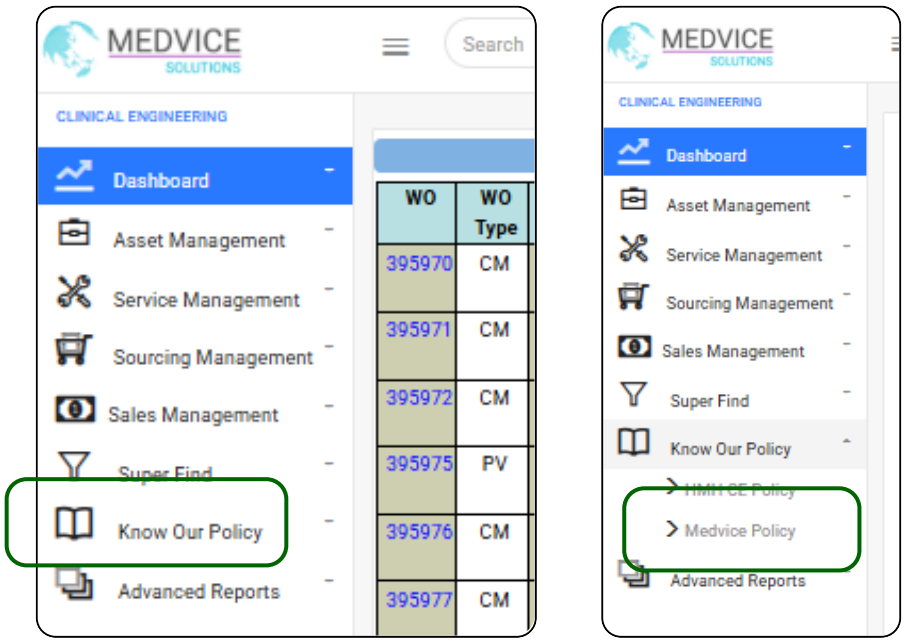


The search also supports conditional queries, displaying related records and contextual information based on the specified criteria.

Know our Policy

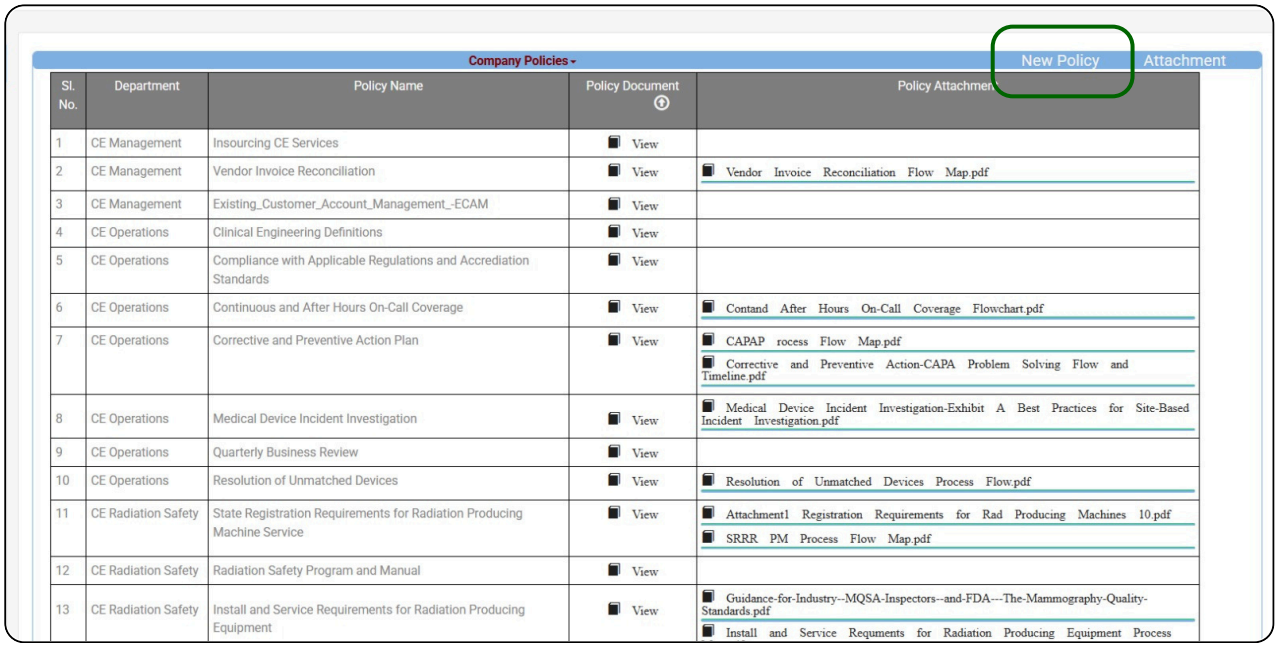
MEDVICE
SOLUTIONS

Navigate to the Know Our Policy tab and select Medvice Policy.



After selecting Medvice CE Policy, the policy dashboard will be displayed. From this dashboard, you can view existing policies, add new policies, and update policy details.

To create a new policy, select New Policy in the top-right corner.



Sl. No.	Department	Policy Name	Policy Document	Policy Attachment
1	CE Management	Insourcing CE Services	View	
2	CE Management	Vendor Invoice Reconciliation	View	Vendor Invoice Reconciliation Flow Map.pdf

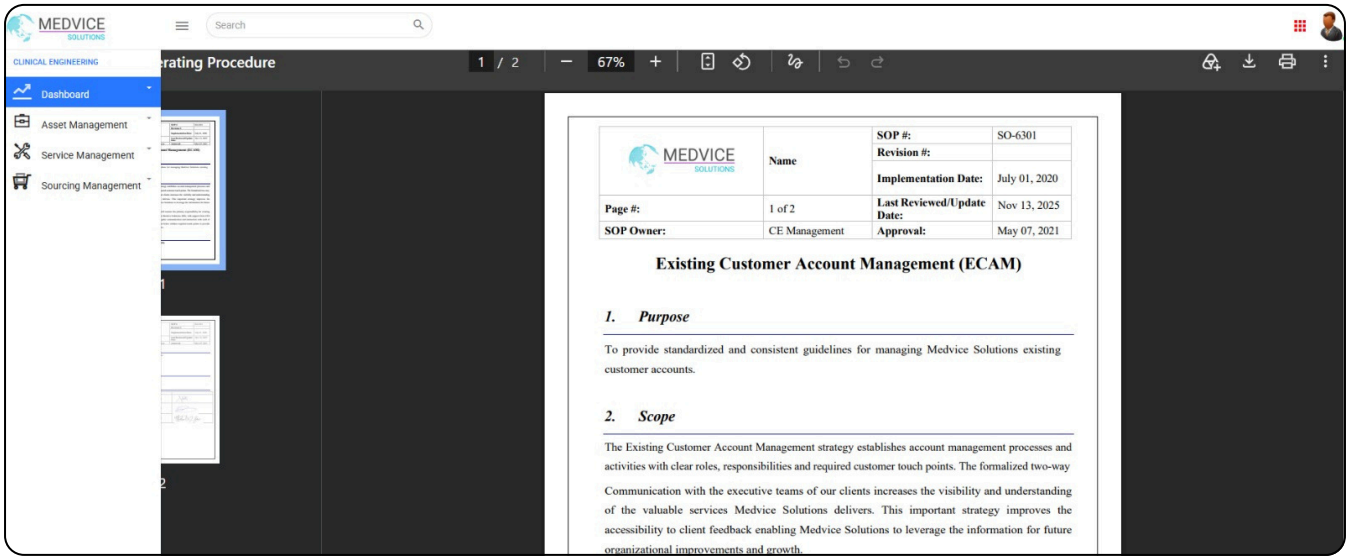
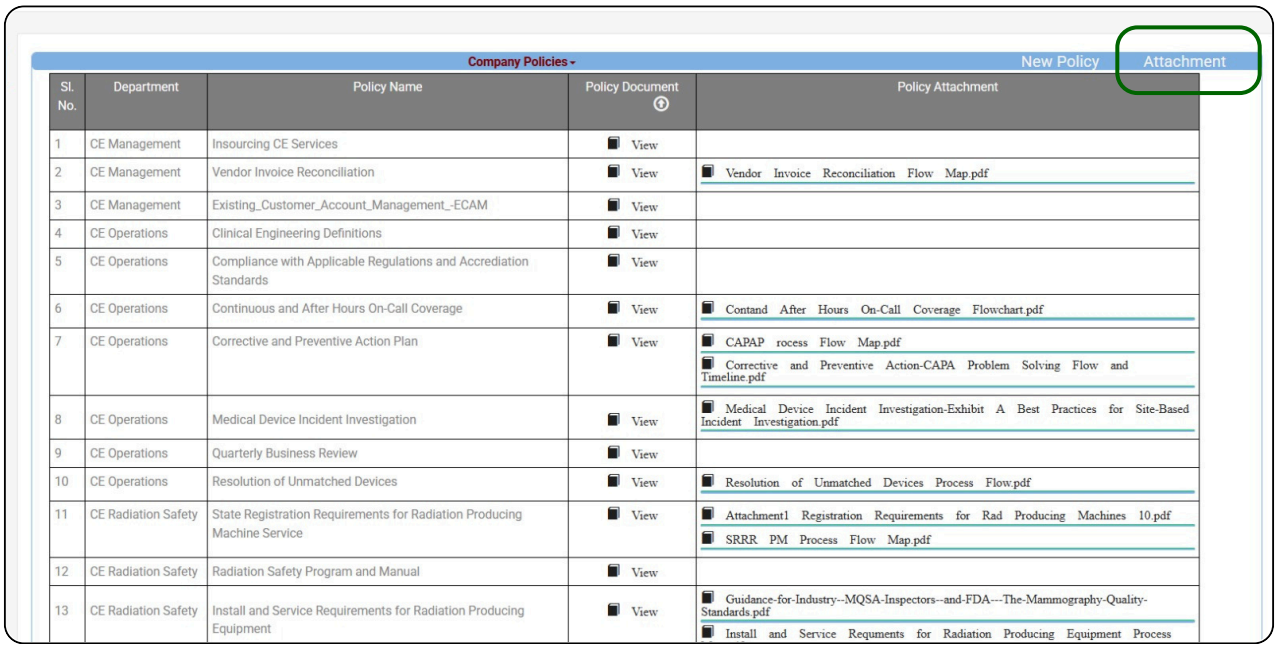
MEDVICE SOLUTIONS

The attached documents will be displayed, as shown in the image below.

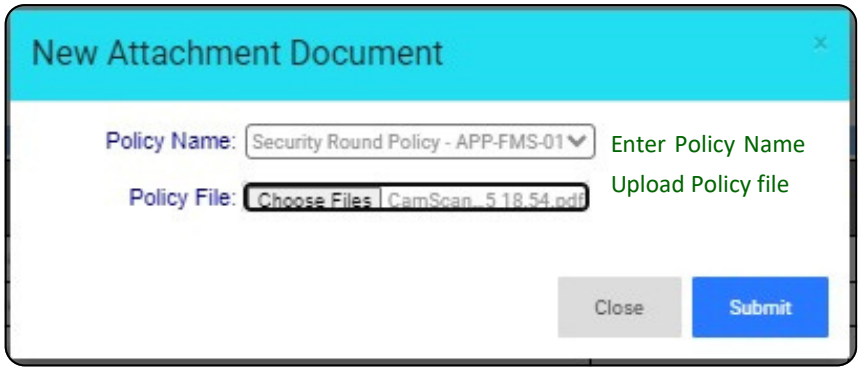


Update Existing Policies Attachments

To edit an existing policy, update its details, or add attachments, select the Attachment tab beside New Policy.



In the New Attachment Document pop-up window, specify the required information in the respective fields.



After completing all required fields, select Submit to save the attachment details.

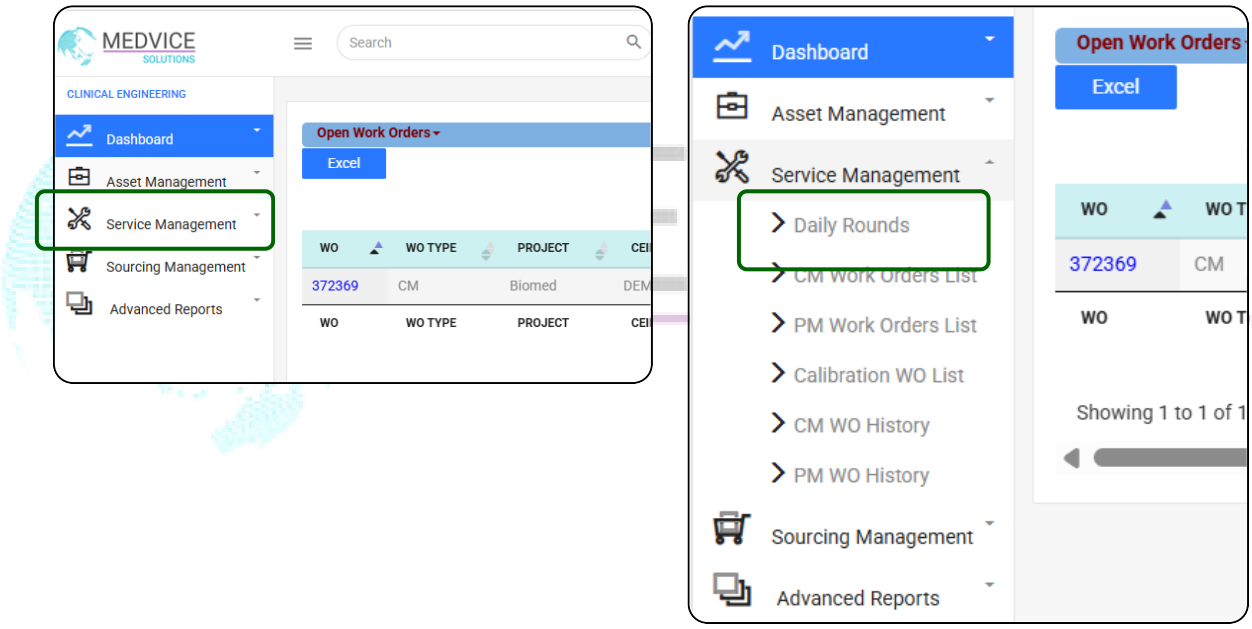
The policy attachments have been successfully added.

Daily Rounds

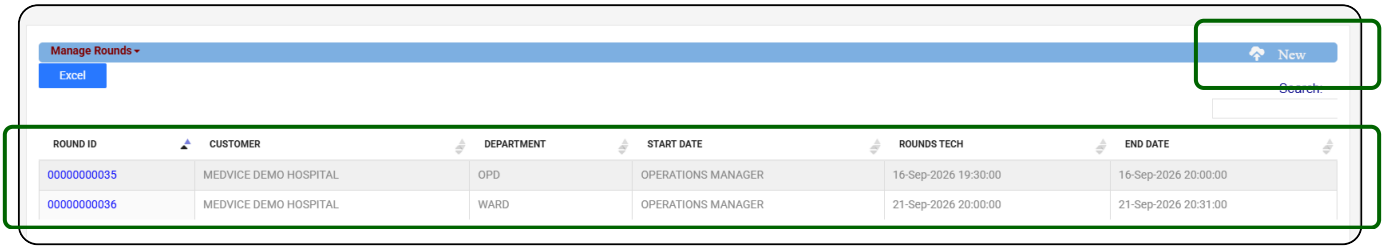
MEDVICE
SOLUTIONS

Daily Rounds is a routine inspection process in which technicians check equipment across designated departments each day. This helps monitor equipment condition, identify visible issues, and detect potential problems that may require further maintenance.

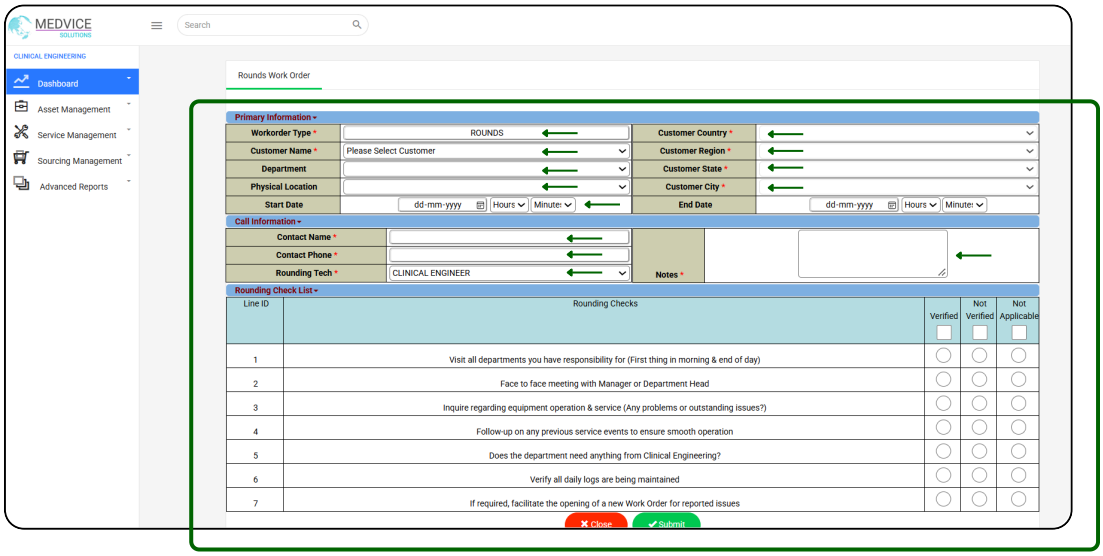
After logging in, navigate to Service Management from the main Dashboard and select Daily Rounds.



The Daily Rounds page will display the existing rounds, as shown in the image below. To create a new Daily Rounds Work Order, select New in the top-right corner.



After selecting New, the system will navigate to the Rounds Work Order page. Specify the required details in the respective fields as follows:

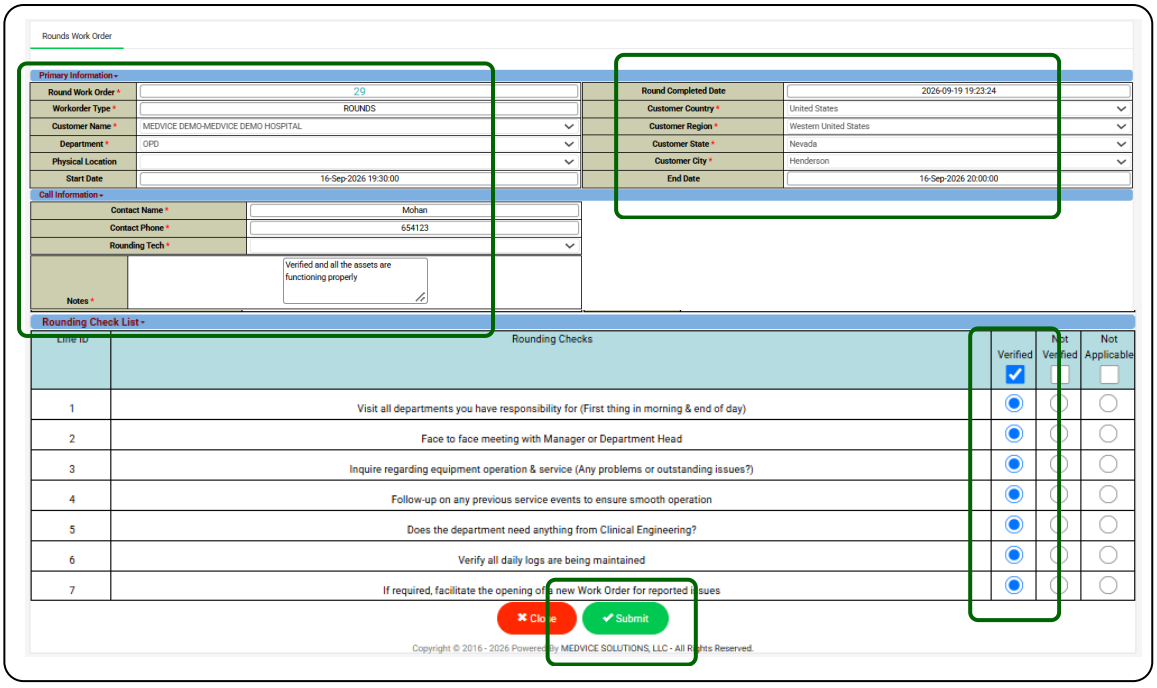


After selecting New, the system will navigate to the Rounds Work Order page. Specify the required details in the respective fields as follows:

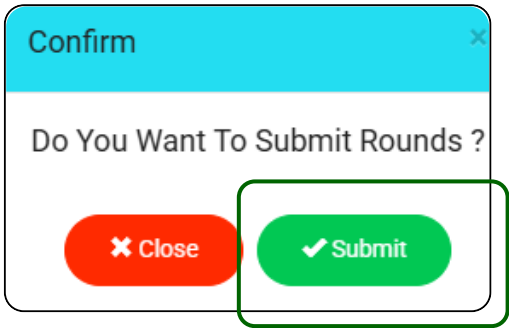
- **Work Order Type:** Automatically set to ROUNDS.
- **Customer Name:** Select the relevant customer or hospital.
- **Department:** Select the department where the daily rounds will be conducted.
- **Physical Location:** Select the specific location to be inspected.
- **Customer Country, Region, State, and City:** Select the applicable geographical details.
- **Start Date and End Date:** Specify the scheduled start and end dates and times for the rounds.
- **Contact Name:** Enter the contact person's name.

- **Contact Phone:** Enter the contact person's phone number.
- **Rounding Tech:** Select the technician responsible for conducting the rounds.
- **Notes:** Enter any relevant remarks or instructions.
- **Rounding Check List:** Review each listed activity and select the appropriate status:
- **Verified:** The activity has been completed and confirmed.
- **Not Verified:** The activity has not been completed or confirmed.
- **Not Applicable:** The activity does not apply to the current rounds.

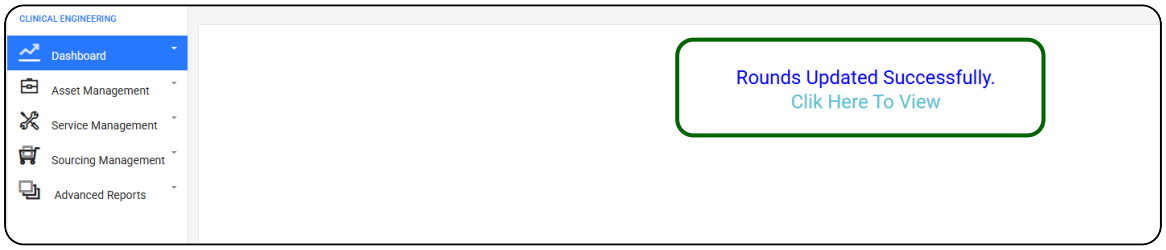
After completing the required fields and checklist, select Submit to save the Daily Rounds Work Order.



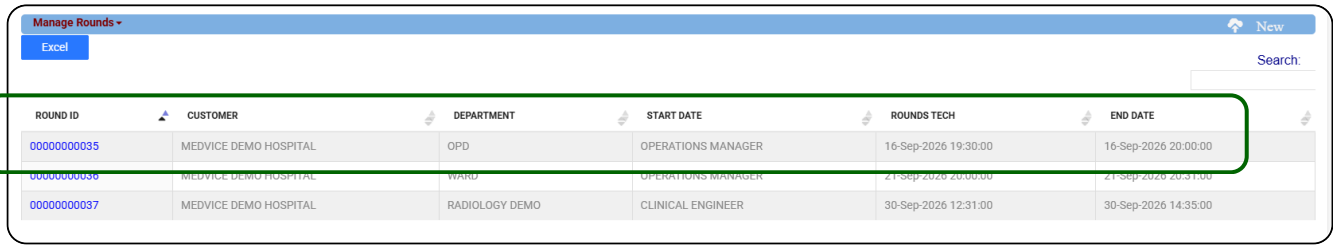
After selecting Submit, a confirmation pop-up will appear. Select Submit again to confirm the creation of the Daily Rounds Work Order.



Once confirmed, the system will display a success message indicating that the Daily Rounds have been updated successfully.



The new round will also be added to the existing Daily Rounds list.

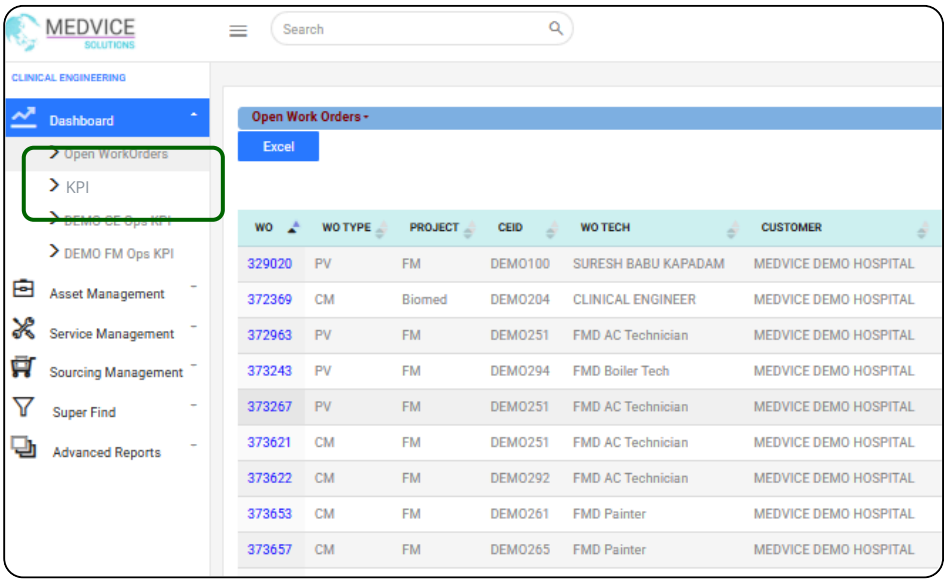


The Daily Rounds process has been successfully completed, and the new round has been added to the system.

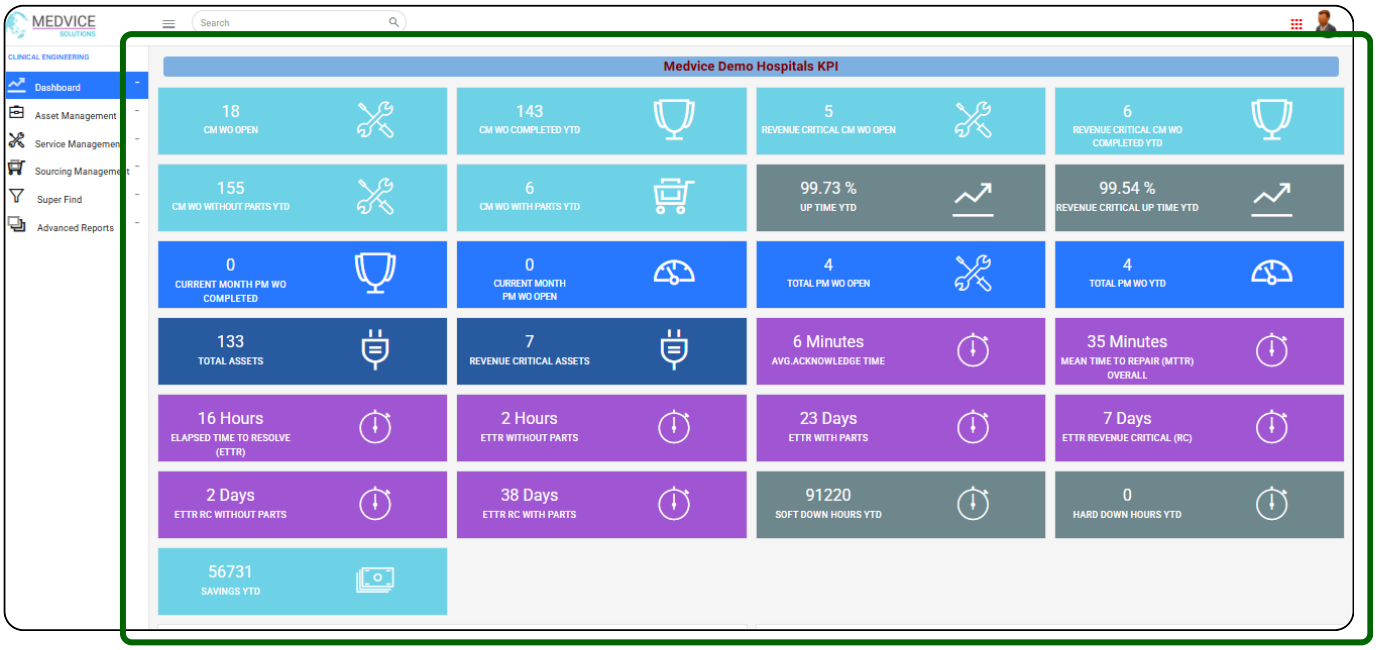
Reports

The Reports section provides a consolidated view of operational and maintenance data within Medvice Insight. It enables users to review key performance indicators and access detailed information for monitoring system performance. These reports support data-driven decision-making and help track maintenance activities and operational efficiency.

Log in to Medvice Insight, select the Dashboard drop-down menu, and select KPI to access the detailed KPI page.



The detailed KPI Reports page will be displayed, providing an overview of operational and maintenance data.

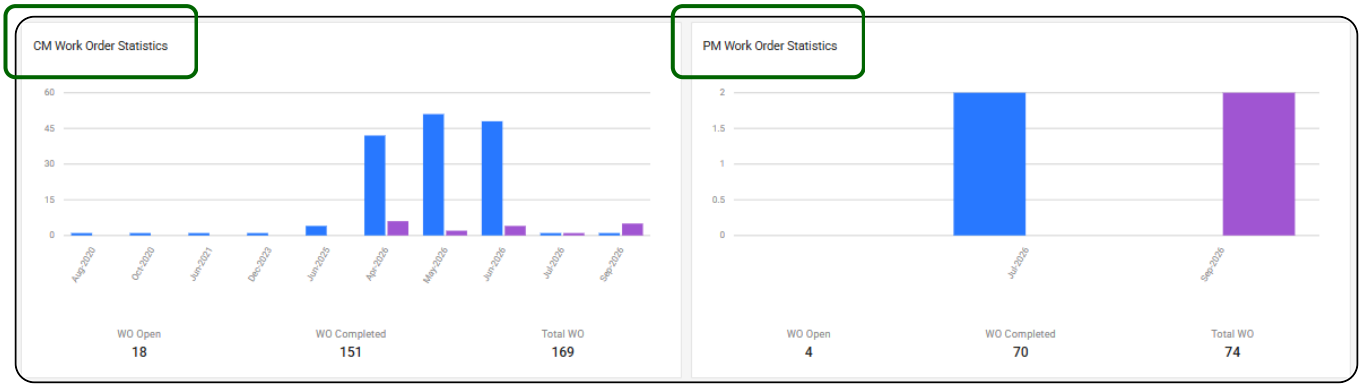


The above image of the KPI Reports dashboard displays the following key performance metrics:

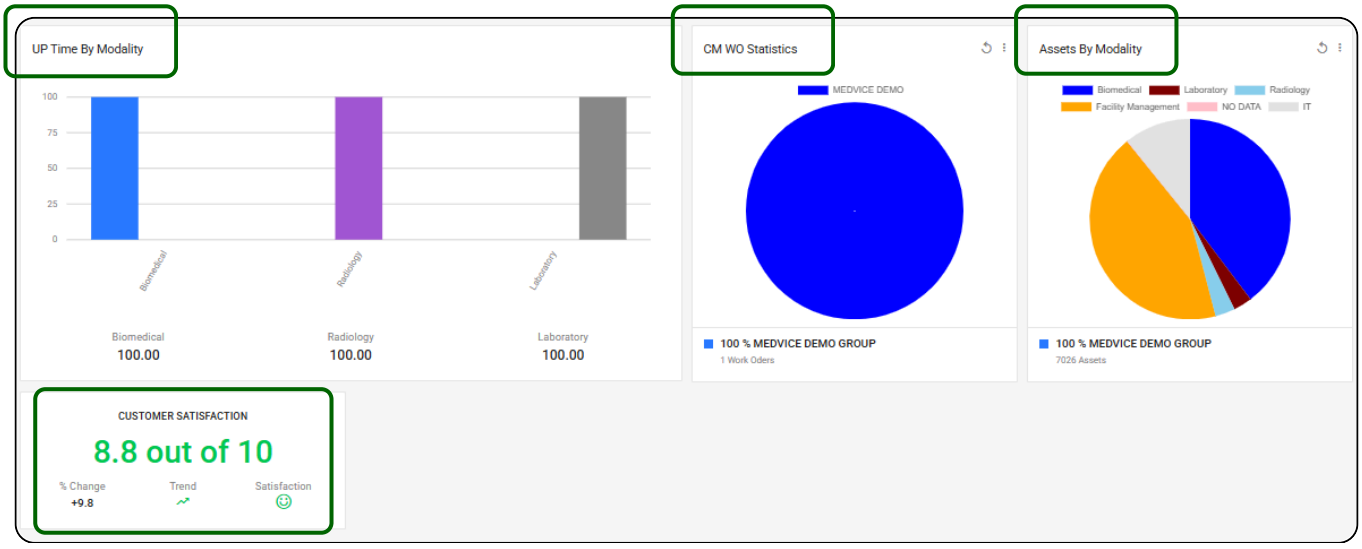
- **CM WO Open:** Open corrective maintenance Work Orders.
- **CM WO Completed YTD:** Corrective maintenance Work Orders completed year-to-date.
- **Revenue Critical CM WO Open:** Open revenue-critical corrective maintenance Work Orders.
- **Revenue Critical CM WO Completed YTD:** Revenue-critical corrective maintenance Work Orders completed year-to-date.
- **CM WO Without Parts YTD:** Corrective maintenance Work Orders completed without parts year-to-date.
- **CM WO With Parts YTD:** Corrective maintenance Work Orders completed with parts year-to-date.
- **Up Time YTD:** Equipment uptime year-to-date.
- **Revenue Critical Up Time YTD:** Revenue-critical equipment uptime year-to-date.
- **Current Month PM WO Completed:** Preventive maintenance Work Orders completed in the current month.
- **Current Month PM WO Open:** Open preventive maintenance Work Orders for the current month.
- **Total PM WO Open:** Total open preventive maintenance Work Orders.
- **Total PM WO YTD:** Preventive maintenance Work Orders year-to-date.

- **Total Assets:** Total registered assets.
- **Revenue Critical Assets:** Total revenue-critical assets.
- **Avg. Acknowledge Time:** Average Work Order acknowledgement time.
- **Mean Time to Repair (MTTR) Overall:** Average equipment repair time.
- **Elapsed Time to Resolve (ETTR):** Total time taken to resolve issues.
- **ETTR Without Parts:** Resolution time for Work Orders without parts.
- **ETTR With Parts:** Resolution time for Work Orders with parts.
- **ETTR Revenue Critical (RC):** Resolution time for revenue-critical equipment.
- **ETTR RC Without Parts:** Resolution time for revenue-critical Work Orders without parts.
- **ETTR RC With Parts:** Resolution time for revenue-critical Work Orders with parts.
- **Soft Down Hours YTD:** Soft downtime hours year-to-date.
- **Hard Down Hours YTD:** Hard downtime hours year-to-date.
- **Savings YTD:** Cost savings year-to-date.

The CM Work Order Statistics and PM Work Order Statistics charts display monthly Work Order trends, including open, completed, and total Work Orders. These statistics help track corrective and preventive maintenance activities and monitor overall maintenance performance.



The dashboard displays Uptime by Modality, CM Work Order Statistics, Assets by Modality, and Customer Satisfaction. These metrics provide insights into equipment uptime across departments, corrective maintenance activity, asset distribution by category, and overall customer satisfaction.



The Reports section enables users to evaluate performance trends, identify areas requiring attention, and support data-driven maintenance planning.

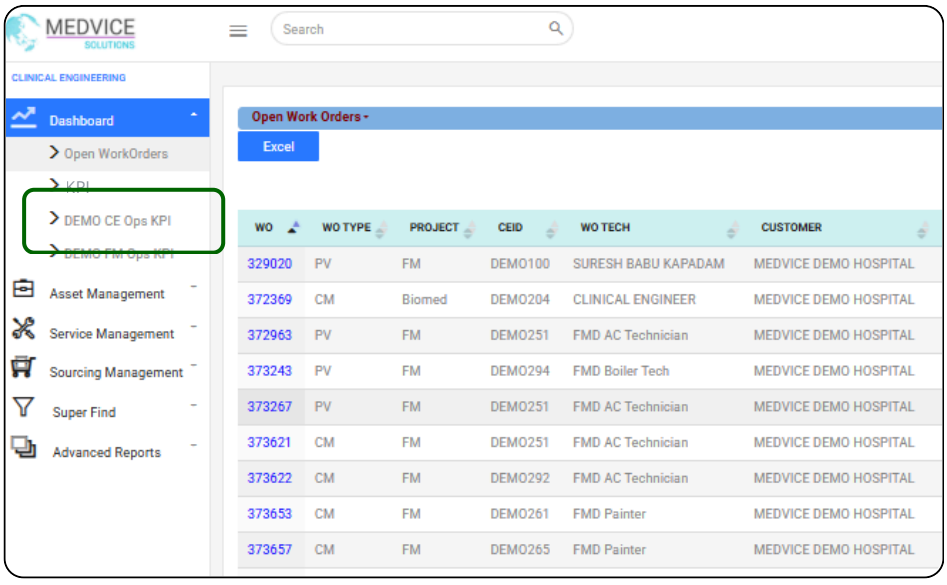
Advanced Reports

The Advanced Reports section provides detailed reports on customer equipment uptime, Work Order summaries, technician performance, and labour hours. It enables users to review service operations and assess maintenance performance through consolidated reports.

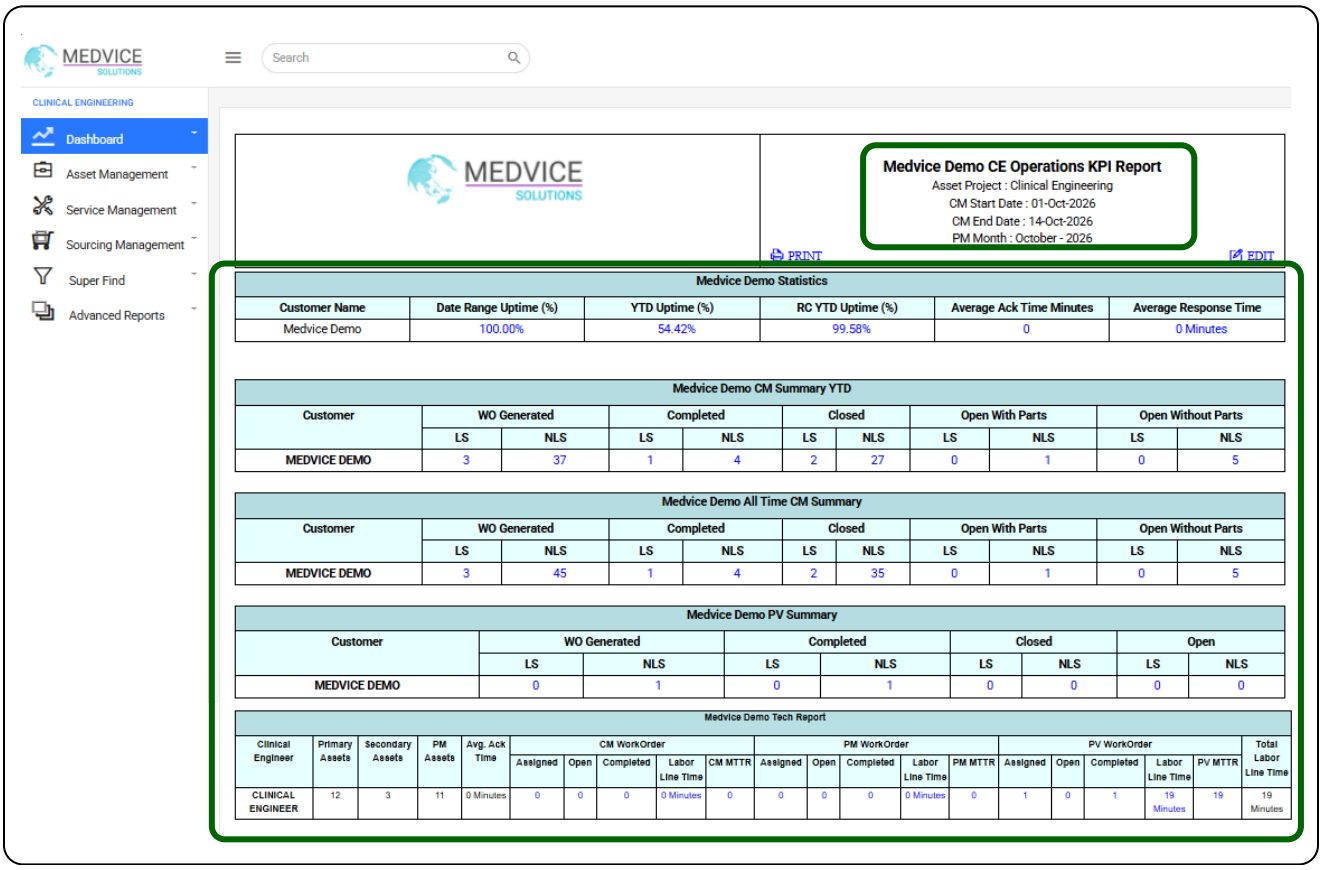
Clinical Engineering (CE) Operations KPI Report

The Clinical Engineering (CE) Operations KPI Report consolidates these metrics to support the monitoring and evaluation of clinical engineering operations.

Log in to Medvice Insight, select the Dashboard drop-down menu, and select CE Ops KPI (Clinical Engineering (CE) Operations KPI) to access the detailed KPI page.



The Clinical Engineering (CE) Operations KPI Report will be displayed, providing a detailed overview of clinical engineering operations and maintenance performance.



The CE Operations KPI Report contains the following sections:

- **Report Header:** Displays the report title, Asset Project, CM Start Date, CM End Date, and PM Month.
- **Medvice Demo Statistics:** Displays customer name, date-range uptime, year-to-date (YTD) uptime, revenue-critical (RC) YTD uptime, average acknowledgement time, and average response time.
- **CM Summary YTD:** Summarizes year-to-date corrective maintenance Work Orders, including generated, completed, closed, and open Work Orders, with and without parts. LS and NLS are shown separately.

- **All-Time CM Summary:** Displays cumulative corrective maintenance Work Order statistics, including generated, completed, closed, and open Work Orders, with and without parts.

- **PV Summary:** Displays preventive maintenance Work Order counts for generated, completed, closed, and open Work Orders, with LS and NLS classifications.

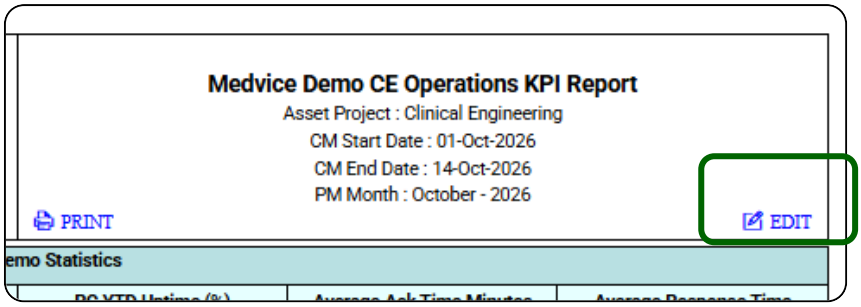
- **Tech Report:** Displays the clinical engineer's primary and secondary asset assignments, PM assets, average acknowledgement time, and CM, PM, and PV Work Order statistics.

- **Work Order Details:** Shows assigned, open, and completed Work Orders, labour line time, MTTR for CM Work Orders, MTTR for PM Work Orders, and MTTR for PV Work Orders.

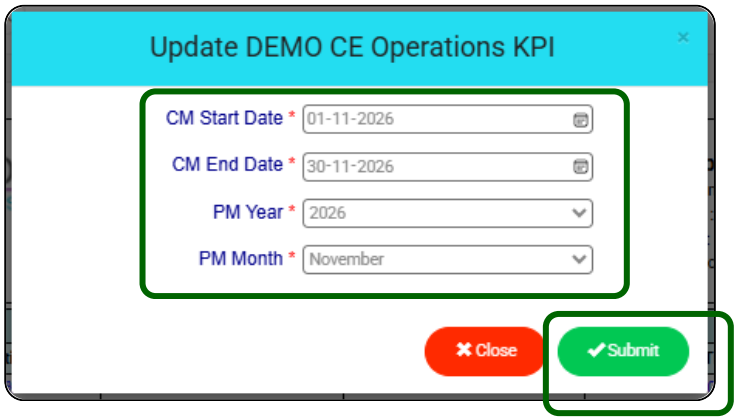
- **Total Labour Line Time:** Displays the total recorded labour time for the technician across the listed Work Order types.

The CE Operations KPI Report provides a consolidated view of clinical engineering performance, enabling users to monitor maintenance activities, review technician workload, and evaluate operational efficiency.

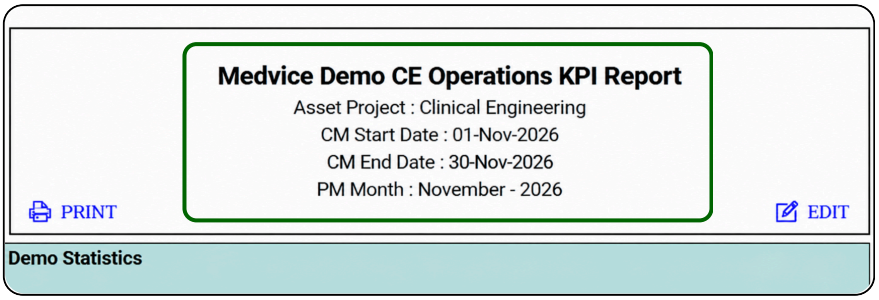
An Edit option is available in the report header to modify the CM Start Date, CM End Date, and PM Month as required.



Select Edit to open the pop-up window. Update the required CM Start Date, CM End Date, and PM Month, then select Submit to apply the changes to the report.



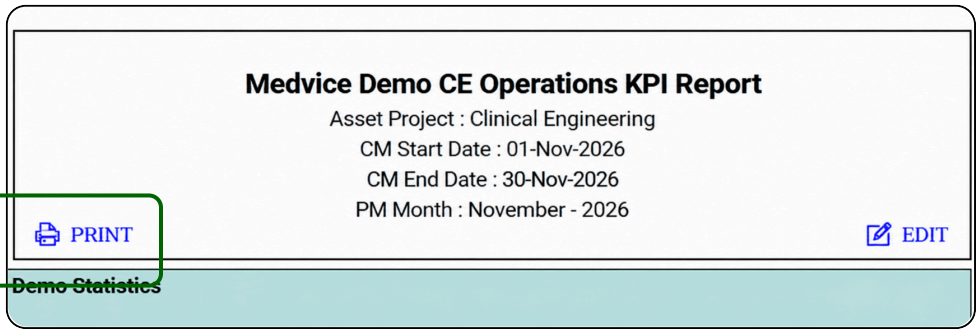
Once Submit is selected, the updated dates and PM Month will be saved and reflected in the report.



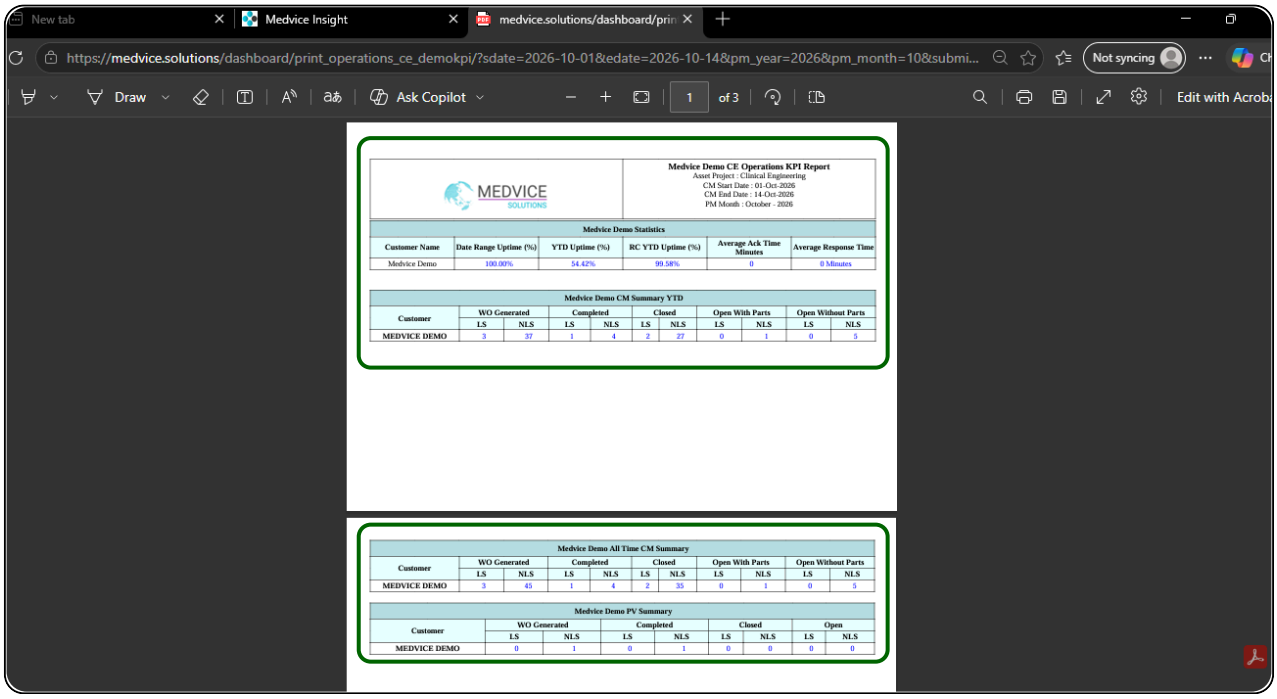
The report parameters can be modified to view data for the required date range and PM month.

MEDVICE SOLUTIONS

A Print option is available in the report header to generate a detailed PDF of the report.



Select Print to open the detailed report as a PDF in a new browser tab. Use the Download option to save the PDF for future reference.



The report can be generated as a PDF and downloaded for future reference.

FM Operations KPI Report

Note:-

The FM Operations KPI Report follows the same workflow as the (CE Operations KPI Report) for accessing the report, modifying the reporting parameters, and generating or downloading the report in PDF format. The available options and steps remain the same. For detailed, step-by-step instructions, refer to pages 139 – 143 of this manual.

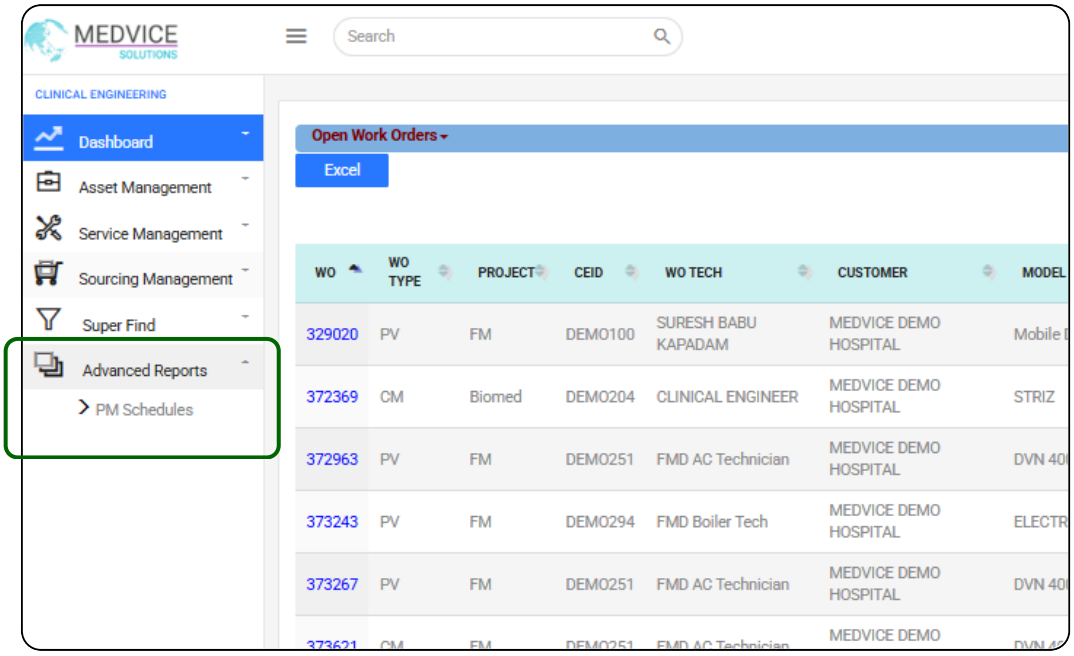
Preventive Maintenance (PM) schedule

MEDVICE SOLUTIONS

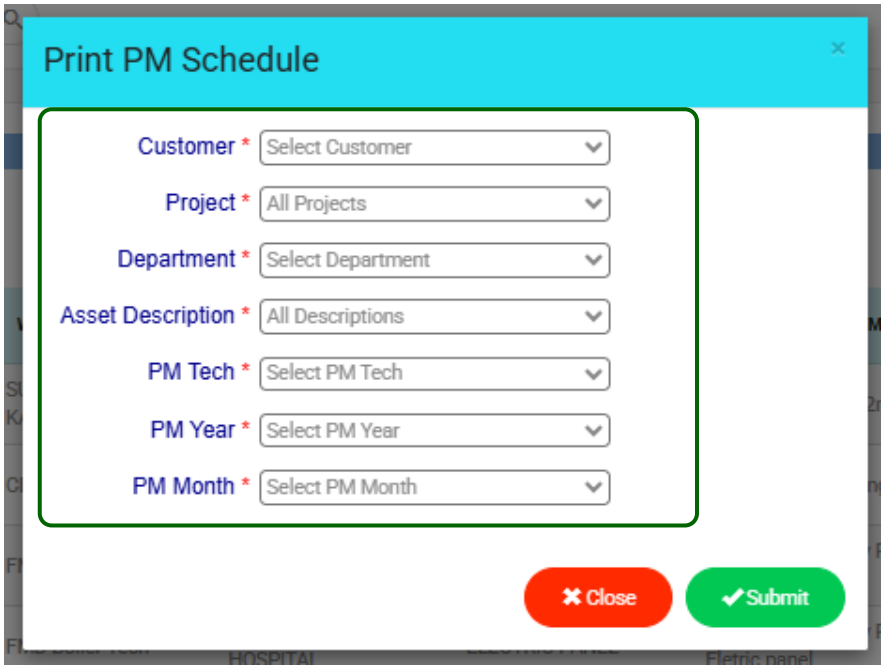
Preventive Maintenance (PM) schedule

The PM Schedules option under Advanced Reports provides a month-wise overview of Preventive Maintenance (PM) schedules for the upcoming year. It displays the planned PM activities for each month, along with details of the last PM performed, enabling users to review upcoming maintenance schedules and track previous PM completion for effective maintenance planning.

After logging in to Medvice Insight, select the Advanced Reports drop-down menu and choose PM Schedules to access the PM schedule data and available filtering options.



After selecting PM Schedules, the Print PM Schedule pop-up window will appear displaying the available filter options. These filters allow users to specify the required criteria to retrieve relevant PM schedule data.



The Print PM Schedule pop-up contains the following filter options to help users retrieve PM schedule data based on specific requirements:

- **Customer:** Select the required customer or hospital for which the PM schedule data is needed.
- **Project:** Choose the relevant project associated with the selected customer.
- **Department:** Select a specific department or choose All to include all departments.

- **Asset Description:** Select a particular asset or choose All Descriptions to include all available assets.
- **PM Tech:** Select a specific technician to view schedules assigned to them, or choose All to include all technicians.
- **PM Year:** Select the year for which the preventive maintenance schedules need to be reviewed.
- **PM Month:** Choose the required month to narrow down the schedule data for the selected period.

Specify the required criteria and select Submit to retrieve the matching PM schedule data. The system will display the results based on the selected filters.

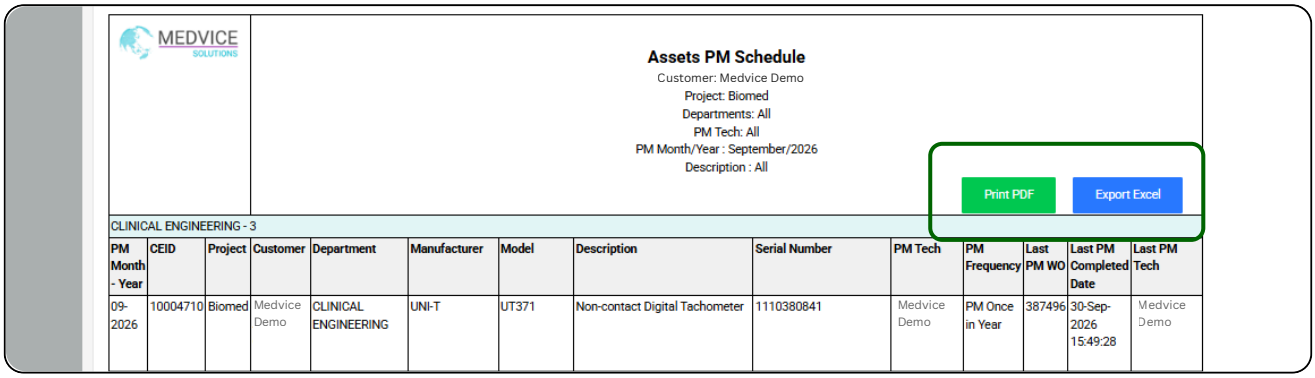
The report header provides two options for retrieving the PM Schedule data:

- **Print PDF:** Generates the PM Schedule report in PDF format for viewing, printing, and record-keeping.
- **Export Excel:** Exports the PM Schedule data to an Excel file for further analysis, filtering, and reporting.



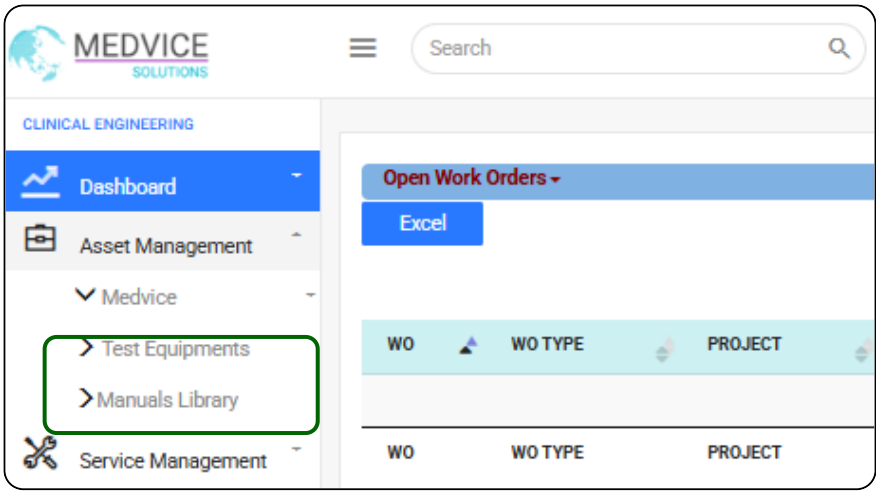
The PM Schedules feature enables users to retrieve, review, and export preventive maintenance schedule data based on their requirements.

Manuals Library

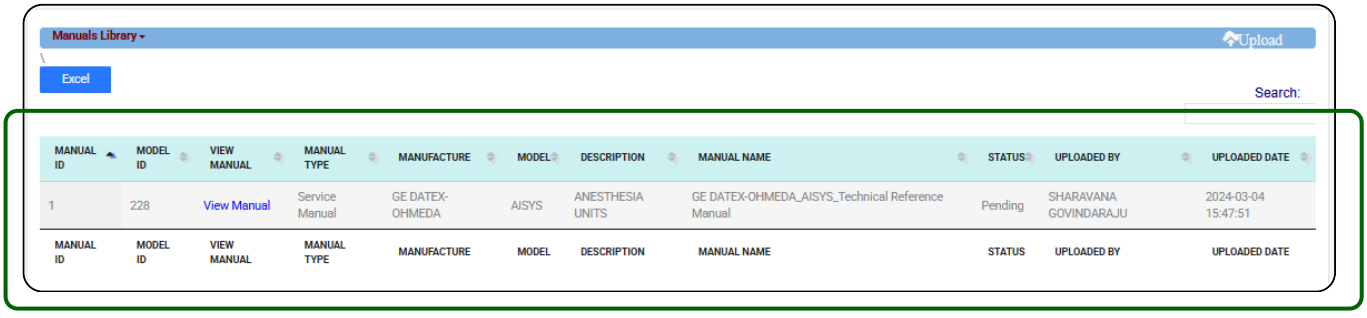
MEDVICE
SOLUTIONS

The Manuals Library provides access to equipment-related documentation, including Service Manuals, User Manuals, and Installation Manuals. Users can search for available manuals based on equipment details and view the relevant documents for reference.

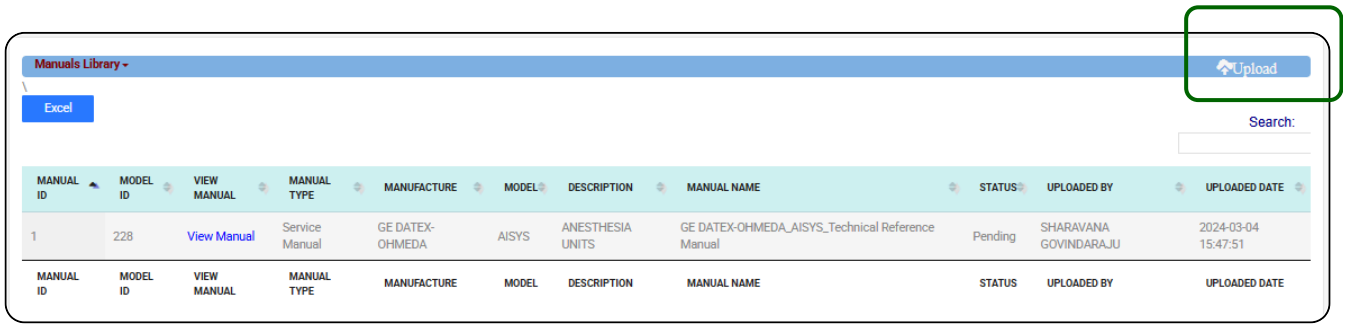
After logging in to Medvice Insight, select the Asset Management drop-down menu and choose Manuals Library to access the manuals page, which displays the available equipment manuals and their details.



After selecting Manuals Library, the Manuals Library page will be displayed, listing the available equipment manuals along with their details, as shown in the image below.



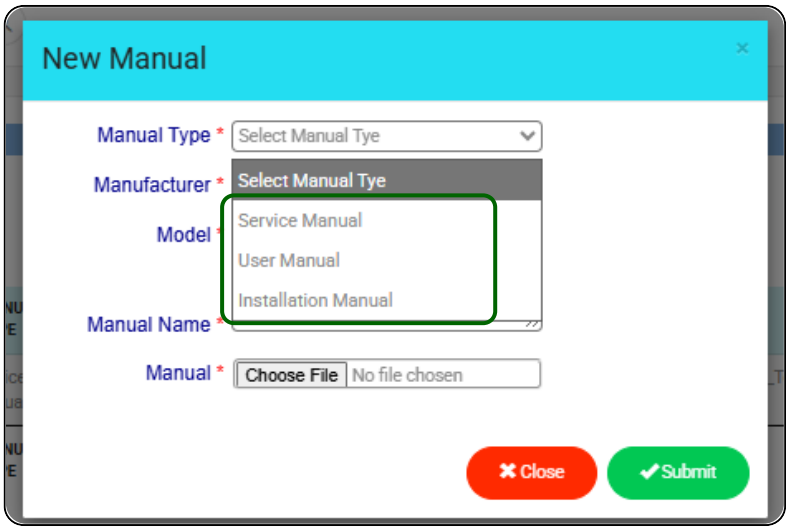
To add a new manual, select Upload in the top-right corner of the Manuals Library page. The New Manual pop-up window will appear, allowing you to enter the required details and upload the manual.



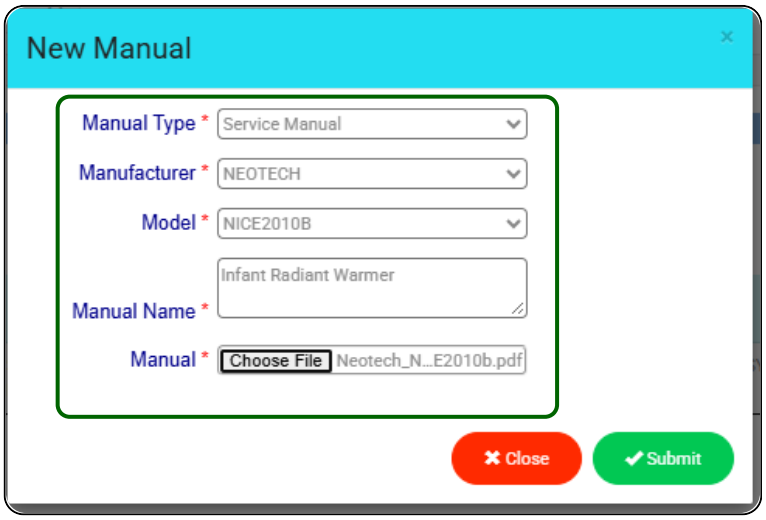
After selecting Upload, the New Manual pop-up window will appear with the following fields:

Manual Type:

- **Service Manual:** Provides maintenance, troubleshooting, and repair instructions.
- **User Manual:** Explains how to operate and use the equipment.
- **Installation Manual:** Provides instructions for installing and setting up the equipment.



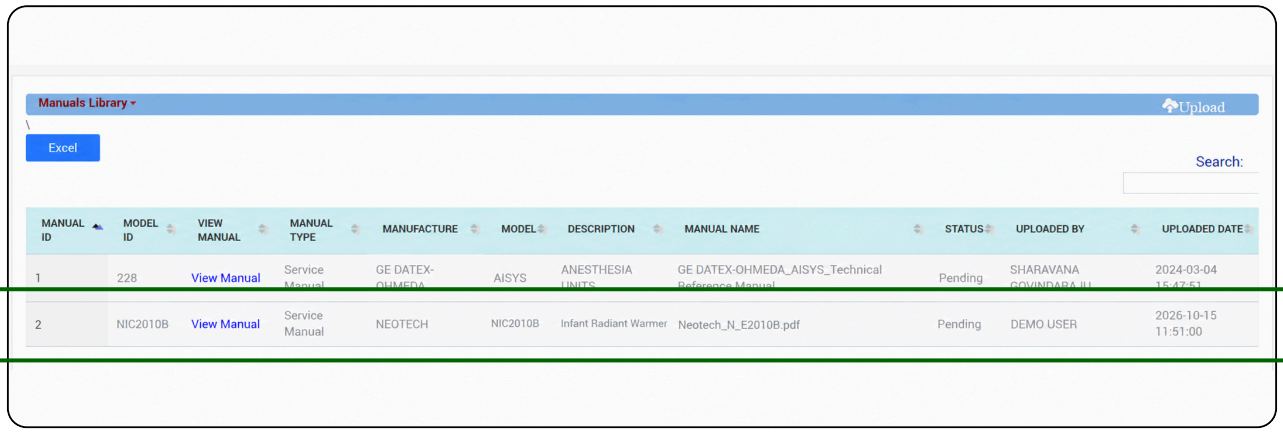
MEDVICE SOLUTIONS



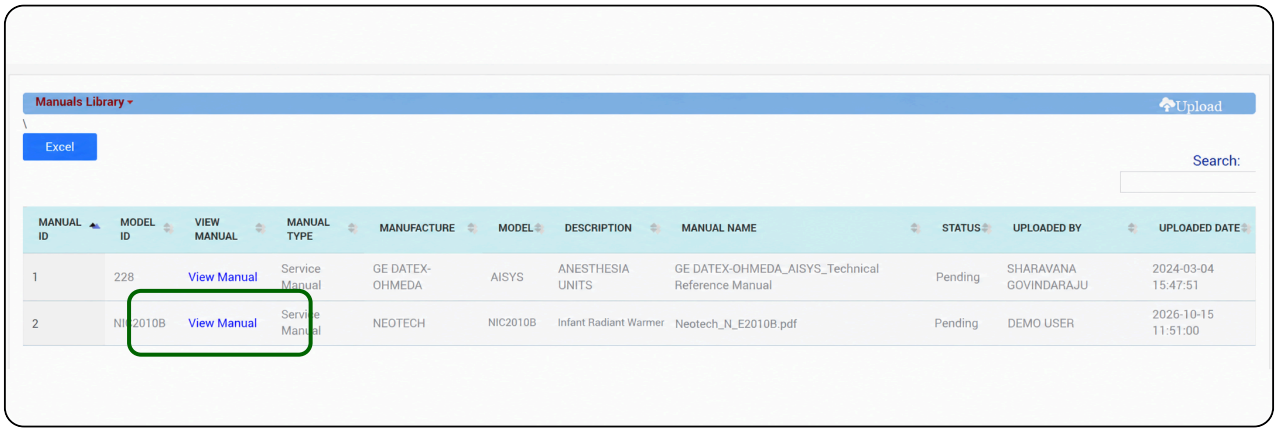
- **Manufacturer:** Select the equipment manufacturer.
- **Model:** Select the corresponding equipment model.
- **Manual Name:** Enter the name of the manual for identification.
- **Manual:** Upload the required manual file from your system.

After entering the required details and uploading the file, select Submit to add the manual to the Manuals Library.

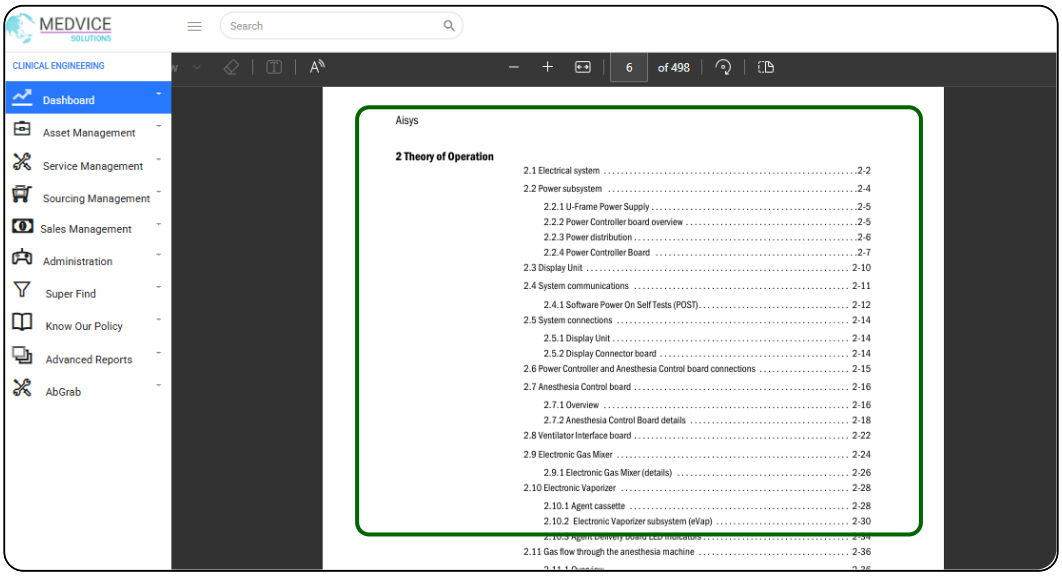
Once Submit is selected, the new manual will be added to the system and displayed in the existing Manuals Library list.



To view an uploaded manual, select View Manual in the corresponding row of the Manuals Library.



The selected manual will be displayed in the system.



The Manuals Library enables users to upload, organize, and access equipment manuals for convenient reference.
